>>>decrease until we are taken out of the limbo we have been in for some
>>>time now.

>> What "limbo", Mike? We've had a class of US ham license with no code test
>> for
>> more than 13-1/2 years now. The maximum code test speed has been 5 wpm >>
for more
>> than 4 years now - and for a decade before that, medical waivers were
>> available.
>
>Limbo is when a prospective ham thinks that possibly he or she can get
>on HF simply by waiting a few months and not having to take any Morse
>code test.

OK. But would that really keep a lot of folks from getting any license at all?

It would seem to me that the sensible thing to do in that situation, were
someone that averse to the 5 wpm code test, would be to pass the Tech and
General writtens. Maybe toss in the Extra written too. They'd have a Tech
license and General and/or Extra CSCE. Then, when the code test went away,
they'd be all set to go. Spend the waiting time setting up a station, antenna,
etc.
>
>Let's compare the situation to when the Governor of PA had the temporary
>tax exemption on computers. I think it lasted something like a week.
>Guess what happened to computer sales at the local Circuit City, Best
>Buy, etc. the week or two before the exemption. When I went in and
>looked around, the sales clerk at one store even told me to hold off
>until next week.
>
> Seems like a direct comparison to me.

Not really. We *knew* the tax exemption was coming, and it was only a week or
two away. And we knew the exemption would only last a week or so.

It made sense for folks who were contemplating a computer purchase to simply
wait a week or two.

Here in southeast PA, some folks simply drive to Delaware for big taxable purchases that are easily portable. Computers, hamgear, cameras, etc. The big question is whether the savings offset the driving cost.

Yet our businesses survive.

>> The code test may or may not go away in the next few years/months/decades.
>> The
>> written exams may change similarly. The various bands may change as well.
>>
>> I don't think that's the problem.
>>
>>>The prospective amateur has *no* idea at this time if the Morse code
>>>requirement will be kept, how long it will be kept if it is, and when it
>>>will go away if it is discarded.

>> So? Someone who really wants to be a ham will do what is necessary to pass
>> the tests at the time.
>
>I'd temper that. If I thought that the Morse requirement would go away
>in say, 6 months, I would have waited.

Sure - but that's if you knew for sure. At this point we don't even have an NPRM.

ARRL predicted 2 years. It's been over 14 months since WRC 2003 ended.

>And most people do not expect a long time to pass before it goes away.
>I know some people were incredulous when I gave my time to expiry (if
>any) in that pool we had a while back.

I reposted the list/pool. Look how many people were wrong - including me.

>>>In as much as most people will not imagine that the changes to come will
>>>take as long as as the will likely take, the net effect will be
>>>potential Hams sitting and waiting for the Morse code to go away.

>> Maybe some will. I think most interested folks will simply learn enough to
>> pass the tests and get on with it.

>>>Its certainly what I would do if I were thinking about getting a
>>>license at this point.

>> But it's not what you did when you got started.

>Some things operating there.
>
>There was no code elimination horizon.

Sure there was. NCI was pushing for it, weren't they? WRC 2003 was on the way.
>
>I'm skeptical enough and have enough experience that I knew it was going
>to be a long time coming
>
>I wanted to get on HF pretty badly.

>
>I'm not afraid of learning something (even though it was admittedly very
>hard for me)

You are not alone. Or even rare, despite what some naysayers would have us
believe.

>> And would you not get *any* license until the code test went away, or would
>> you just hold off from upgrading?
>
> Hard to say. When I originally got my license, I was only planning on
>being a Technician, and I was thinking about how to apply Amateur radio
>to my other hobby, Amateur astronomy. I really didn't have much interest
>in HF at all! then after a field day where I was allowed to operate, I
>was hooked. So my experience is likely not typical.

I disagree!

A lot of new hams come into amateur radio by such indirect routes. In my youth,
many hams came from the ranks of SWLs.

>In fact, if it
>wasn't for the Technician no-code license, I probably wouldn't be a Ham
>now. (to my great loss!!)

See? You would have just held off upgrading.

But we don't see that happening. The total number of Tech and Tech Pluses is
declining.

>>>Whatever is done should be done and done quickly. That said, there is a
>>>mile of difference between "should" and "will". I still stand by my
>>>original prediction made some time ago.

>
I think it's lack of publicity, plus competition from other activities, plus
the loss of "honeydew hams" to cell phones and FRS/GMRS. Plus antenna

limitations, RFI, ...

>> I was a ham way back in 1967, when they said incentive licensing would
>> "kill
>> amateur radio". There were about 250,000 US hams back then. Yet in the 10
>> years
>> after incentive licensing took full effect (1969-1979 or thereabouts) the

Wheeling got 9.5 inches during Ivan's leftovers. There was much
flooding in the lower areas and in area creeks and runs which come the
sides of steep hills. Even up here at 1500 feet, the ground was soupy
and the gravel driveway turned into a small creek. The really big
problems will take place when the Ohio River crests at well above flood
stage from way north of Steubenville to well south of Moundsville.

Today we have sunshine here and up on the hill, you'd never know there'd been a rain.

Because Steve lies, and Steve has a mission, and Steve is nuts.

Like the guy in the movie, Acropolis Now, he was lying on his back in
a hoe house, the ceiling fan started to look like a rotary wing
propellor, then he says, "I asked for a mission, and for my sins, they
gave me one."

No "hi, hi" on that one.

Holey Moley! You're a real engineer? Got any land surveying under
your belt?

Introduced me to a lot of good friends. Showed
> me a world many folks don't even know exists.
>
> Why should Len's words bother me?

So much so that you kill file him? Can't imagine it!

> > To allow a creep like Anderscum to trash it unabated would be
> >unthinkable.
>

> His words have only as much power as you give them. Calling him "Anderscum"
> simply lowers you to his level.

Absolutely. And Jim's "Dr. Fill" persona isn't nearly enough to work
on Steve's psychophenomenon.

> Can't you see that's what he wants?

Everyone but Steve sees it!!!

Doesn't that clue you in the least???

Sorry Han's, Steve >>>IS<<< Controlled by Len!

Hi, hi!

> > ESPECIALLY when he is so blatantly wrong on so many occassions.
>
> Then point out the errors without the name calling.

In-friggin-possible!!!

> >> I also believe that for good or bad, you enjoy it to a certain extent.
> >
> > Only that it lends some balance to his mistruthfulness and deceit.
>
> When you call him "Lennie" and "anderscum" and go off on his wife or whatever,
> it undermines *your* credibility. Which is just what he wants.

Hellooooooooo?????????

Steve's just lucky that Len doesn't pick up the phone!!!

> >> So you guys have a relationship. It's a pretty strange one, made easier
> >>by Netnews, but this sort of thing has existed for a long time. It's the
> >>old Winston Churchhill/Lady Astor thing. They traded barbs with each

>
> Was it Lady Astor who said to Sir Winston:
>
> "My good sir, I do believe you are drunk!"
>
> "Yes, m'lady, I am. And you are quite ugly. But tomorrow I will be sober...."

That was mean. And Steve is crazy. Tomorrow, Steve will still be
crazy, Lady Astor will still be ugly, and Len will still be laughing
at you guys.

Sir Winston just might have a headache.

> >> Why Lenover21 resists my suggestions that this is what is going on is
> >>beyond me. It is no insult, its just how things go sometimes.
>

thier?

> That's been misproven repeatedly. Just google up the famous "sphincters post",
> where he berated and denigrated a US Coast Guard radio operator for his
> recollections of his duties at NPM.

The guy who sold out his PO box to Deignan the callsign collector?

Now there's someone who contributes to the state of the art.

> >>I do not have now, and I never did have any military rank. That needs
> >>to be clear. But there are more ways than that of serving your country.

Some ways are more meaningful than others.

> Agreed 100%

10 - 50%

> > Absolutely.
> >
> > Lennie did one active duty tour in the Army. Good for him.

More than Kelly did.

> > But I know people who have made far greater contributions to the United
> >States who never left thier home state than Lennie ever hoped to "passing 1.2
> >million messages at ADA in 1953".

Name them and "thier" deeds.

> Len and over 700 other military personnel there at the time...

But not Kelly. Then there was that attorney who's war was "Yom
Kippur" but never served.

> >That's what get's his goat. The really sad thing is that Lennie COULD
> >be
> >in that same boat...but just hasn't got the guts to be anything other than
> >what

> >he is now...bitter and angry.

I see a broken down Marine, who tragically lost a child, now extremely bitter and angry.

I see Kelly suggest I take my children to Somalia.

Is there any middle ground with you guys?

> What makes you think Len is bitter or angry? I don't see that at all.
>
> 73 de Jim, N2EY

I'm just waitng for that one.

So, as an amateur radio magazine stand, how would you rate them?

And am I still holding at "strike twoooooo!" or has your umpireship called me out?

I think Jim made a fairly accurate statement that time.

I think he also made a fairly accurate statement when he said that a
Morse Code exam would pose a barrier to Morse Code use.

bb/T5 + kids. Hi, hi!

So sorry.

David Heil worked me on two different occassions.

Am I to understand that you are not David Heil?

If not, I apologize for a case of mistaken identity.

Yes, you do irritate and annoy me. You are like that; an annoyance and irritant. Like a bug. Jim much less so. He actually has something to say on occassion.

But you go beyond irritance and annoyance. You make references to homosexuality and pedophilia, and pseudo-threaten bricks/windows and slashes/tires and terrorist acts on wives.

You're a Peach.

A Gem.

A true Ambassador of Amateur Radio.

You would make Riley proud.

Ham of the Year material.

So when I asked, "Jim, when did we lose the code test?" you felt compelled to answer as if you were Jim?

But you answered incorrectly. We still have a code exam. Jim could have told you that since he is incapable of lying (he knows he'll burn in hell for lying, and you know you're already in hell, so what's the diff?).

And I keep telling Jim that you cannot help yourself from having to respond to every posting, but he doesn't believe it. Yet you prove it over and over again! And he doesn't believe it. No matter how many times you prove it over and over again, he just doesn't believe it.

I think the both of you are dysfunctional.

Loggins and Messina got it right, "Twin Brothers of Insane Mothers."

Best of Luck.

Ask Brian/W3RV about his inverted "L." It's meant for absolutely
every situation and every band. You just can't miss with his antenna.
There's no reason to stay off of 160.

No error.

He whimpered and whined for a week saying that sumptin was wrong.

Never said what, couldn't say what, but he knew what.

Like Jim saying that true geniuses don't have to tell you that they
are geniuses, you just eventually discover it.

Dave wanted -so- badly for me to discover that he was an A1-A Op, but
it never happened.

> You tried to drag Dave around byt he nose with that "A-1 Operator" stuff
> for the longest time.

I never once >>>byt<<< David's nose.

> You continue to do other assinine things without thinking them through.

Like attempting to respond to Yell DMC? Is "thier" any point?

> Your post in another thread about me allegedly knowing other country's radio
> regs being one of them.

You seemed pretty damned sure of yourself.

> Classic Brain.

Sadly Steve.

> Steve, K4YZ

Best of Luck.

Don't worry. He isn't Santa Claus.

R&L? I don't buy magazines from them.

> And am I still holding at "strike twoooooo!" or has your umpireship called me out?

You're still foul-tipping.

Yep. You keep looking for a buyer and no one is buying this one any
more than they're buying your laments of post after post of scolding.

> I >>>own<<< it and I'll trot it out whenever I want.

It is still sway-backed. You're forced to feed and water it until it
dies or until you persuade someone to buy it.

> Don't like it? Make it go away! Behave differently. Condemn Steve's outrages.

Steve's "outrages"? Surely, you of all people can see that nothing
Steve has written here is any worse than the insults you and
Leonard-the-non-ham have tossed his way.

No. good guess, but that was an exchange he had with Bessie Braddock, a
House of Commons member from Liverpool.

His exchange with Lady Astor came after a weekend of arguing with her
while at the Astor mansion. During the pouring of coffee at one point,
she said:

"Winston, if I were your wife, I'd put poison in your coffee."

"Nancy," Churchill replied, "if I were your husband, I'd drink it."

No poor Mike. Getting "blasted" by Lenover21 is just part of posting here.

> Whatsa nice guy to do? "Steve's not such a bad sort, I mean he never
> called >>me<< a homo or a pedo, and he never threatened my wife or
> kids..."

Yaknow, with all due respect, Brian, if you believe that your family
has been threatened, print out the offending email, and take it to your
DA. If he or she finds it to be credible and have merit, then
appropriate action will be taken.

Or you could file papers that would prevent him from ever communicating
with you in any form.

>>But Mr. Coslo doesn't work that way. I suspect his time on the ice is one

>
> And plays dirty?

As a Captain, it is part of my job to stay cool. And if you don't have that ability, you aren't going to make it as one, because out on the ice, there are a lot of people who would like for you to freak out. A lot of them actually play and act in a style similar to Lenover21 and your own. (two different styles to be sure) I'll be called names, bumped, speared, whacked and punched.

And I have helped other players to take penalties at critical stages of the game, simply by skating up to them during the play, and asking them how far they think they would fly if I checked them, or simply tap my hockey stick against their skates. Even the occasional skateing of a tight circle around someone. Sometimes I tell them I don't think they have the power to knock a big guy like me over. Those who are prone to flying off the handle will do it. I've picked myself up off the ice many times, to find my team up by a man in a crucial part of the game.

And that is not playing dirty.

Of course, I do play a physical game. Sometimes that player finds out how far he flies when I check them! ;^)

What if you are ON THAT FREQUENCY and he dumps a KW of broadcast BUllcrap on top of it?

Should you run and hide? ANd let him trash it for as long as he likes? Like 24/7 for a solid week like he recently did?

According to the FCC he does. And that is ALL that counts.

Other than him being a dipshit.

> etc.

It might seem sensible to you or me, but I don't think that all that
many people think that way. Of course, they would also have to know

about CSCE's too. I didn't know about them until I flunked my first
Morse code test.

And I'm not certain that the CSCE will apply to the new licensing
scheme. And of course, the year and a day might (probably, in my
opinion) pass before the new testing regimen takes effect, in which case
you will have to take the tests again, and will have wasted the money on
the old tests.

> Not really. We *knew* the tax exemption was coming, and it was only a week or
> two away. And we knew the exemption would only last a week or so.

Specific dates aren't the issue, at least with what I am trying to say.
Its the concept of the thing. If you only wait for a while (the Morse
code requirement goes away, or the tax is suspended) you will get (the
amateur radio license or the computer) for a lot (less effort or less money)

My statement is that some people will wait for reduced entry
requirements. Most people think change happens quickly. SO they say "I
will wait". Then chaneg doesn't occur in a short time. Then they lose
interest and go away without ever becoming a Ham.

And I don't completely buy that the person who does this wasn't *really*
interested. I only recently became a Ham - around 5 years now. I had no
real interest in many of the things that Hams do when I got started. I
discovered the joys only after some time had passed.

Now I'm a member of the BOD at our local club. I was Field day chairman
this past year. I control op the club station during the big QSO party
of the fall. I'm at every public service event we have. And I am
starting to organize a NSS project in PA (wanna join in?)

Not too shabby for an "mildly interested" peron, eh?

> It made sense for folks who were contemplating a computer purchase to simply
> wait a week or two.

As it might make sense to some people to wait before getting their
licenses.

Well, yeah. Remember that you are posting from the point of view of
knowing a *lot* of details. When I was a Technician, I had heard of NCI.
But I didn't know what a "WRC" was. Takes a while to assimilate all that
knowledge.

And I did know enough that it was a real requirement, so just the NCI
pushing for code elimination didn't hold any sway for me.

Even better!

Now how about this one:

He was in some enormous hall or other (House of Commons?) and someone remarked
that he was reputed to have drunk enough liquor in his life thus far to fill
the hall to its first balcony level.

Sir Winston looked around slowly, taking in the majestic ceiling far above, and
said quietly: "So much more to do, so little time..."

>Hard to say, Jim. I don't think posts such as his come from a sense of
>being in harmony with the world, tho'!

You do have a point. And upon reflection, Len often comes across as very angry.
Then he denies it, which proves the point.

OTOH, some people *like* being angry. Makes them feel alive, to rant at others
and tell them a thing or two. Sounds odd but I've known people like that -
they're not really happy unless they're yelling and fighting.

I'd rather be contemplating the beauty and wonder of our world and universe.
Like the aforementioned Ms. Klum.....

Len wants to change amateur radio's regs. Len isn't a ham but has proclaimed a decades long interest in amateur radio. Len has posted here for years yet he hasn't done anything about actually obtaining an amateur license. Len says he doesn't want an amateur license.

He takes swipes at the ARRL, hams who would like to see morse continue, hams who use morse and hams who prefer morse to other modes. He ridicules the traditions of amateur radio. He belittles the activities of hams who participate in emergency communications and traffic handling.

I think he wants that ham ticket but I think he'd rather die than (I love this now famous line) "jump through hoops" to obtain one. If that

is his wish, I'm sure he'll have it his way.

Yeah, I think Leonard's world is empty. He doesn't achieve the respect here which he feels is his due as a former PROFESSIONAL.

For all his toil in presenting his long, increasingly eccentric material, he has won over a single ardent admirer, "William". I'm sure he's proud.

That's gonna be ugly, really ugly. Post here tomorrow.

> been a rain.

Only scuzzy, drizzly, a bit nippy and annoying here. We got away clean this time.

What's the matter?
Did you work for John Kerry at Heinz,
when he outsourced all those jobs overseas?

I'm afraid I have little patience for
people who claim they can't find a job.
I don't have a college degree,
tons of money or youthful good looks.
If I want another job, I can find one in less
than a week; just takes some effort
and a willingness to be flexible.
I won't start at $75,000 a year,
but I can get my family by until
that opens up again. Sure beats
sitting on my ass, whining and crying
"I can't find a job! WAAAAAAAA!!"
Bull. You can find a job.
You just don't want the jobs you can get.
Who's fault is that?
If your Demoncrat buddies get elected,
they can stick their hands
in the working man's pocket (me) again
and give you some more food stamps.
Won't you be proud of yourself?

> In any event I'm voting
> for Kerry no matter what you have to say.
Lemmings do go charging off the cliff
no matter what anyone says. It's a shame.
Some people can be fooled into doing anything-
even voting for a scumbag like Kerry.

> End of discussion.
I don't blame you for running away.
I expect that from someone
the Demoncrats can buy so easily....

It IS fun...hobby and otherwise.

Thankfully we are capable of doing more than one thing in any
given time frame...Unlike certain "professionals" who can't seem to do
it in ANY time frame...

W3RV has helped me with many antenna projects. He has expertise ranging from large Yagis to simple wire antennas.

The implementation of practical HF antennas for amateur radio is about 95% mechanical engineering and 5% electrical engineering.

But of course to get anyone's help, it pays to ask in a nice way and actually listen to/read the information provided.

"If it was easy, anybody could do it"

Here's another:

Even before I was a ham, I was reading QST because a local club had old copies they'd lend out. One author really captured my imagination - W2LYH, whose homebrew projects were incredible combinations of ingenuity, skill, craftsmanship and performance. His 23 tube sectionalized communications receiver (about 1961) and high-stability Franklin VFO (1971) are "must" reading for ham homebrewers, just for the ideas presented. I wondered if I'd ever build such projects, or ever meet Bob. His articles were constant inspiration and Elmering, but I'd never met him or even heard him on the air.

My homebrew projects have long been designed around parts-on-hand or 'found objects" rather than ordering new parts from catalogs. (New parts are more expensive). For example, back in 1978 at the Rochester, NY hamfest a guy was selling old Heath parts, and I found the one 3395 kHz CW filter in a box of SSB ones. $5. Built a complete transceiver around that filter - the Southgate Type 6, which entered service about 1984.

About 10 years later, at the Gaithersburg fest, a different guy was selling xtal filters that looked interesting. They were gray painted boxes with center frequency of 1.4 MHz and bandwidth of 500 Hz. He only wanted 50 cents each so I bought four, since he had no tech data on them.

Made some calls and soon had the specs. They were 8 pole filters with really good numbers - much better than the 4 pole Heath unit. But were the ones I had any good? Only way to know for sure was to build a receiver and listen to the things.

So I cobbled together a simple 80 meter CW receiver out of junk box parts. One of those "schematic in the noggin" things. Scraps of PC board and aluminum made up the "chassis" and the VFO was from another project, retuned a bit to cover the needed frequencies. This wasn't a practical receiver, its only purpose was to check out the filters.

One Sunday night it was done and I started tuning around the band. Lots of good signals, which is what you need to check out a filter. There was some kind of contest/QSO party going on, which is the best testbed for new gear anyway. It was soon clear that the 50 cent filters were really good performers - I should have bought the whole box! Here was the next project for me - build a transceiver around these new filters.

The contest turned out to be the SOWP QSO party (Society of Wireless Pioneers) event, open only to members. Which explained why the signals sounded so good.

I was listening more to how the filters behaved than to what they were saying. One particular signal was very strong and stable, so I used it to check out unwanted-sideband rejection, skirt selectivity, etc. Finally I tuned it on the nose and listened. He signed - W2LYH!

I ran over to the Type 6 and fired up. When he called CQ again I gave him a buzz. He said he'd work me in a few minutes when the contest was over. It was a long wait.

When the clock came around he called me and we had a nice long QSO. Yes, Bob was still using the 23 tube sectionalized receiver and the Franklin VFO. He was quite tickled to hear that I was a homebrewer and fan of his articles, and that I'd found him on a homebrew test receiver.

I found out that he'd been both a professional and amateur radio operator for many years. He was on Long Island because of RCA's installations at Riverhead. And a lot more adventures. Which explained the SOWP connection, too.

We had many more homebrew-to-homebrew QSOs after that, exchanged QSLs and letters.Oddly enough, after that initial QSO I ran into him quite often, purely at random. He won the "Best Fist" award on Straight Key Night many times. He introduced me to the magazine "Electric Radio", which published a version of this story. Unfortunately, I never got to meet him, and I found out a while back that he became a Silent Key in 2000.

RIP R.V. McGraw, W2LYH. One of my Elmers, though I never met him.

73 de Jim, N2EY

Too true, Mon Ami!

But in order to put IN the paperwork, one must HAVE the paperwork to
submit. And in order to have that paperwork, one must have had documentation
of legality.

Brian doesn't have any. He wasn't.

FYI. The CSCE is NOT good for a year. It is good for 365 days so leap years have occasionally caused people problems. For example if you tested on March 30, 1999 then it expired on March 29, 2000 since February of 2000 had 29 days not 28.

> There's no reason to stay off of 160.

No Burke, wrong again as usual. I very recently stated that it worked
just ducky 3-15 Mhz didn't I Putzlet? I did not claim it worked on 1.8
Mhz.

Any number of times, mostly for your benefit, I've stated that the
thing was a 135 foot OAL end fed wire without a radial system. Which
is to say that the only way it could work even half decenly would be
if it's feedpoint impedance was some high R+jX value which would
minimize it's ground losses given it's lack of a decent radial system.
I had kids in the yard, I couldn't do radials. So no, I didn't even
try it on 160, I knew better, on 160 it would have been a dummy load
because it would have been only a quarter wave long. Not that I would
expect you to understand why one does not feed the end of a
quarter-wave wire when there are kids in the yard...But on 80 and 40
it cooked because it was hot-fed. R+jX = some nice big vector sum you
see.

No, of course you don't see it, silly me.

Now Burke, once more what's the story on the sked to show off the
end-fed wire you supposedly have eh? Or is it in the same category as
your T5 operation?

Date/time/freq pse?

w3rv

>
>Sound's like brick is coming my way.

The "brick" is your own stupid assertions, Brian. If you'd do a bit of thoughtful and careful THINKING before you hit the "SEND" key, you'd get far less stuff thrown back at you.

>I'll make sure my wife is prepared for terrorism.

I am sure she's prepared every night that you're next to her, Brian.

As for the rest of the post, you still aren't making sense (not that THAT is unusual).

"Outside" the US Amateur Bands does not mean outside of the United States.

And as of today, Lennie still does not have a license to operate INSIDE the Amateur Bands (of ANY country). Nor does he have a license to transmit OUTSIDE the US Amateur Bands without an FCC issued station license. (As a US Citizen, a foreign license of ANY nature is useless in the United States except as a keepsake for Lennie...)

The real fact is that David Stinson is an idiot, for once again posting
off topic junk to the rec.radio.amateur.* newsgroups. He's done it before,
and undoubtedly he'll do it again.

And everyone else who felt compelled to respond to this thread to do anything
but condemn Stinson for doing this has just added to the clutter.

I'm a little over two hours away by car. I've never heard him but then
again, he may stick to the higher bands and be running low power.

Go listen to the ARRL transmissions....do you hear any hype about selling things? NO, about credit cards...NO.

Now go listen to MAN, does he direct people to his web site ? YES. What do you find there? Items for sale......do you get it now?

The hurricane has been gone for days. It punied out up North today. NO other storms are within two days and they are NOT EXPECTED to fall upon US or cause problems in the water nearby.

So why is K1MAN STILL Blabcasting on 14.275 calling for "volunteer jump teams" ?? Over and over and over again.

If you want to hear real ham radio in action in this emergency or the next then listen to 14265, the SATERN radio system. www.satern.org

The thread is clearly marked "Political Off Topic."
If you honestly didn't like it, you wouldn't read it
and you wouldn't contribute to it.
Since you do read and contribute to it,
we can deduce you are a hypocrite.
And since you are Canadian, we can also deduce you
are sticking your nose in where it doesn't belong
just so you can have something to bitch about
and pound your scrawny chest over.

Piss on you.

Regards,
me.

What are you talking about?

So far I have no bricks through my window, no tires slashed, and my
wife and kids have experienced no terrorism. You're the only one
saying that I've "shot my mouth off."

But you "predict" the bricks, etc, are coming.

> "Outside" the US Amateur Bands does not mean outside of the United States.

Why not?

Also, do radio waves respect international boundaries???

There are lots and lots and lots of JA's with HK2 and KH6 licenses.
Why is it not possible that Len has a Japanese or Mexican or UK
license?

Maybe he has a UK license and is licensed to operate in the MF bands where the U.S. Amateur Radio Service has no authorizations.

You need to brush up on your foreign amateur radio rules before shooting off your mouth again.

I don't think Len wants a ham license at all.

>Yeah, I think Leonard's world is empty. He doesn't achieve the respect
>here which he feels is his due as a former PROFESSIONAL.

Perhaps.

Or maybe he gets a form of pleasure from behaving the way he does here.

Haven't you known people who got great pleasure ruining others' fun? People who could take *any* activity and tell you it was bad for you, ruined the environment/economy/society etc., and was a waste of time?

You've probably been blessed, as I have, to know people of all ages who are full of life, enthusiasm and joy. These people give off positive energy - they're just plain fun to be around, even when there's hard work to be done.

Then there are folks who are just the opposite. They're full of criticism, anger, nastiness and tearing-down of others. Sometimes they try to mask it with "humor", but the mask doesn't always work. They give off negative energy.

Which would you rather be around?

Think of this: Suppose we all were in the same area, and wanted to do a Field Day effort. Who would you rather have as leader, given only these choices: Mike, Steve, Brian or Len?

I recall a series on "This Old House" some years back where the project involved building a new timber-frame structure. The actual timer framing was done by a team of workers led by a master timber framer. Most of the workers were amateurs who had *paid* to be there, learning something about the art and being part of the experience.

Now in case you didn't know, timber framing is a very old craft. Modern timber framing is a mixture of very old and very new techniques. For example, the plans are CADD generated and the timbers come from a modern sawmill. But the finish cuts are all done by hand, with very sharp chisels that are in the personal care of each worker. Modern comealongs and slings are used, but the real work of timber frame erection is done by manual labor.

The team of timber framers worked for a week to cut all the joints and assemble all the bents. On Raising Day, everyone involved in the project worked from dawn-till-done, and the whole frame was raised before the sun went down. And a small evergreen tree was lashed to the top of the last bent, a tradition that is still honored by ironworkers raising skyscrapers.

The point of this long story is that the master framer led his team with pure positive energy. Everyone involved wanted to be there, amateur and professional

alike, and it wasn't just a job but an experience.

Now of course somebody will point out that modern methods could cut the timber frames in a fraction of the time, and the whole thing put up by a small crew with a crane. But it wouldn't be the same, would it?
>
>For all his toil in presenting his long, increasingly eccentric
>material, he has won over a single ardent admirer, "William". I'm sure

The question is - proud of what?

>
>You need to brush up on your foreign amateur radio rules before
>shooting off your mouth again.

You need to know AMERICAN law, Brian. We are, afterall, discussing an
American citizen operating from American soil.

Lennie may very well have one each of the licenses you cited. Who cares?
They are as useful to him on US Amateur allocations as his GROL is.

So Sayeth the FCC.

Not a one of them is any good to him in the United States except as a keep
sake...Just as I said before.

So Sayeth the FCC.

The "home" license of the nations you cited above are only good in the
United States when used by the foreign operator, and only under specific
limitations. And even when the foreign license is used for basis of reciprocal
operating privileges, the foreign operator must obey American subbands.

So Sayeth the FCC.

If the foreign operator takes and passes an American license, s/he must
comply with the limits of THAT license, even if it grants fewer priviledges
than his/her original license. They cannot (legally) switch between "Kx6xxx"
on one occasion then "K6/xx9xxx" in order to exceed the priviledges granted.

So Sayeth the FCC.

An American citizen with a foreign Amateur license cannot use that license
on US soil or from US administered territories.

So Sayeth the FCC.

Now...try to stop being an idiot, Brian, and try to focus on reality. I know it will be tough, but I know you can do it...You've done it (however briefly) before.

Well, there you have it.

So what's the problem?
>
>But in order to put IN the paperwork, one must HAVE the paperwork to
>submit. And in order to have that paperwork, one must have had documentation
>of legality.

Of course.
>
One must also have the desire for their operation to be accredited. While most
DX operations want to be accredited for DXCC, not all do. And if an operation

resulted in only a few QSOs, what's the point?

> Brian doesn't have any. He wasn't.

How do you know? You weren't there. I wasn't there. Nobody we know other than Brian Burke was there.

Maybe he has documentation, maybe he doesn't. We know he's not going to submit any, so it doesn't matter anyway.

So what's the problem?

Did you see my earlier post about the UP/URS-2 and getting permission from "Sarge?"

Suppose that's what happened. What difference does it make to you or me or anybody else *now*?

It is the joy of the shared task. Not all that many people know about
it, or don't know that they *do* know it, but it is available to all. A
lot of engineers know about it, and certainly soldiers that do the
fighting know a version of it. Portions of it can be awfully difficult,
but there is the moment when you stand back, and you think "WOW, look
what WE did!" Beats beer served by Hiedi Klum... sometimes! ;^)

I enjoy the shared labor a lot. For some reason there are people that
don't like me because of that. Perhaps your above mentioned description,
fits... 8^)

I think he keeps the Morse code debate going in here. All the PCTA's I know in this group certainly WANT the test to continue, and they usually have a strong opinion about what Morse means. But if it goes, they plan on going on. Wonder what he'll do then?

And as for emergency comms, I was listening to the hurricane net while Ivan was going through Grenada. The net control was dealing with a person on a boat that lost it's engine, and was being tossed around. A lot of information was being passed around, from info about how the storm was abating, to some general help info - since the net op had some boating in hurricane experience, to general Moral support. A whole lot of things came together to help the people on that boat. I suspect they might have a little better opinion of Ham radio than our antagonist. And this is just one thing that will never get mentioned anywhere outside of this forum, no doubt. How many other little dramas go on in emergencies involving Ham radio?

Sure. But Mike's point isn't that we'll get *no* new hams, just that we'll get
fewer new hams. Remember that for a given dropout percentage, the more hams
we have, the more newcomers it takes just to break even.

Right. So at most the effect of this "limbo" is to slow down upgrades. But it
looks like the opposite effect is happening.

>that's what they really wanted to do!

Who knows?

One thing is for sure - none of this is high priority to FCC. They're obviously in no hurry to change things.

A number of factors to think about:

1) Since 14 months ago there have been what - more than a dozen different proposals? Each one has generated a pile of comments and reply comments, including the massive verbiage of you-know-who. Somebody at FCC has to read each comment and reply comment, analyze and tally the content, and come up with a distilled version. Then turn all that into an opinion. And then turn the whole bunch into an NPRM. All of which takes time and resources. Plus each time a new proposal comes in, the process gets restarted.

2) Since 9/11, the focus of the entire federal government has changed. That includes FCC. Remember how it looked like we'd get a new band 150 kHz wide at 60 meters, and instead we got 5 channels? That was due entirely to the feds

rethinking their need for resources after 9/11. Sure, they probably wouldn't have a problem if we got the new band, but why take a chance?

3) Suppose, just suppose, dropping the code test would cause lots of growth and lots of new hams on HF. Maybe FCC doesn't want to deal with that right now. More admin work, more enforcement work, more RFI complaints, more anti-BPL comments....

4) Maybe all the pro-code-test comments have had an effect. If you just count the comments *by author*, I think you'd find that far more individuals who bother to comment want to keep Element 1 than want to drop it. And you'll also note an almost total lack of nonhams saying "I'd get a ham license tomorrow but for the code test". Note also that the 2000 restructuring did not result in sustained or increased growth, even though it reduced both code and written testing for every license level. It would be logical for FCC to simply look at the comment totals, plus other data, and leave things as they are.

>> the
>> real work of timber frame erection is done by manual labor.

btw, they measure-twice-cut-once on everything. And the joints are made with
tolerances no more than 1/32". Never mind that such precision isn't really
necessary structurally and that nobody will see most of the joints up close,
they do it that way because they can, and because it's about care and
craftsmanship, not just tossing up another McMansion.

>> The team of timber framers worked for a week to cut all the joints and

>something.
>
I don't know how the tradition originated, but it continues to this day.
Perhaps it is a way of acknowledging that living trees gave us the wood to
build the structure. Perhaps it is a symbol of new life, in a new shelter.

Whatever it is, it's a tradition that lives on, despite there being no
structural reason for it.

>> The point of this long story is that the master framer led his team with
>> pure
>> positive energy. Everyone involved wanted to be there, amateur and
>> professional alike, and it wasn't just a job but an experience.

>
>It is the joy of the shared task.

That's part of it.

>Not all that many people know about
>it, or don't know that they *do* know it, but it is available to all.

Yes.

But it cannot be bought - it must be earned.

>A
>lot of engineers know about it, and certainly soldiers that do the
>fighting know a version of it. Portions of it can be awfully difficult,
>but there is the moment when you stand back, and you think "WOW, look
>what WE did!"

Been there, done that. Why do you think my rigs are homebrew?

> Beats beer served by Hiedi Klum... sometimes! ;^)

How about if Ms. Klum serves the beer after the last beam is in place? Best of
both worlds!
>
>I enjoy the shared labor a lot.

Me too.

There's another part of it, too: By doing something like that timber-frame, the
workers were connecting with something much bigger than simply cutting some
wood. They became part of a tradition that goes back centuries and yet
continues today. Each worker could sign work they'd done, leaving a part of
themselves with at the site.

They created a home for real people - a family that the workers got to know,
because the family was right there working with them. They became a community
for the time they were there.

The master framer gave a wonderful speech at the beginning of Raising Day. On
that project, they were actually replacing a 150+year-old timber frame
structure that had to come down because of rot in the old wood. He spoke of how
the timber framers of that time had worked, and how the structure had long
outlived those who built it. He noted that the new structure could hopefully
last as long or longer. Most of all, he connected the past, present and future.

>For some reason there are people that
>don't like me because of that.

Me too!

Perhaps it is because we remind them of things that cannot be bought, nor acquired easily, yet which are much more worthwhile than those things which can.

Perhaps it is the fact that, no matter what can be done theoretically, real things get done because real people actually do them.

Consider the last time you did some sort of project yourself from start to finish, or with a closely knit team. Compare it with simply paying somebody to do it for you. Is it the same thing? Why or why not?

>Perhaps your above mentioned description,
>fits... 8^)

I think so.

>>>For all his toil in presenting his long, increasingly eccentric
>>>material, he has won over a single ardent admirer, "William". I'm sure
>>>he's proud.

>> The question is - proud of what?
>
>Darned if I know...

And there's two more pieces to the puzzle:

Everyone who worked on that timber frame could walk away proud of what they'd done. Yet they need not brag about it - all anyone need do is look at the house. It stands as a testimony to their work, skill, spirit and community.

There is also a big difference between those who imagine, create and build, and those who hate and destroy. The destroyer needs the creator desperately, but the creator does not need the destroyer at all. Those who attacked the WTC and Pentagon on that terrible day in September 2001 could not build the airplanes or the buildings - they could only destroy them.

Which would you rather be around? And which would you rather be?

KH2D is overfocused on a few narrow

interests in amateur radio. He cannot
see the antenna farm for the guy wires.

Most radio amateurs that we have
encountered are neither clueless
newbies nor brain-dead old farts.

There are a few who fit his
descriptions, but only a few.

He says that the "nocoders"
"won the war".

We think you would be happy
about that. But you do not
project joy or happiness.

Why?

Does that include "Leo"?

We can certainly
"handle" anything you
can "dish out", Len.

We are anonymous
because we choose
to be.

You have been, or have
tried to be, anonymous
here.

Try dealing with what
we have to say, rather
than who you think we are.

Agreed.

>However, the reaction of the PCTA, specifically
>Steve/K4YZ/K4CAP, to any anonymous post that disagrees with him is a
>call to arms, and usually results in a "cowardly scum" accusation.

You write as if the actions of
one are the actions of all. They
are not.

Consider the reaction of
Lenover21 to any anonymous
post that disagrees with him.
It is predictable with a high
degree of confidence that he
will respond with insults and name calling.

Would you consider his responses
to be the same as all 'NCTA' people?

Or are they just his?

For that matter,
consider the reaction of
Lenover21 to any
post that disagrees with him.

Yet you tolerate and condone
Len's behaviour.

Or under Part 95 regulations, which
require no special training or experience.
>
>> Your opinion on the issue does not matter.
>
> Only becasue his "opinion" is usually NOT based upon practical
>experience
>or facts. A bad combination.

No.

Len's opinion on the issue does not matter
because Len does not regulate
radio.
>
>> Our opinion on the issue does not matter.
>

> Sure it does! It is from the perspective of practiced and experienced
>knowledge.

No.

Our opinion on the issue does not matter
because we do not regulate
radio.

>> FCC's opinion on the issue does matter.
>
> And they stated it right there on HIS license. No station license, no
>"operating". No ambiguity at all.

No operator license, either. A commercial
license does not authorize or qualify its
holder
to operate an amateur radio station.

So, by the FCC's own definition, Len is
neither qualified nor authorized to operate
an amateur radio station.

It is only the FCC's opinions and definitions
which matter on the issue.

That is reality.

>> Len's strong points.
>
>But it is.

No, it is not. He is usually
quite illogical.

>Yet logical consistency would demand that upright amateurs
>disapprove of Steve Robeson/K4YZ/K4CAP's behavio[u]r.

Why?

He simply mirrors Len's
behaviour here. Your
behaviour, too. With one
important difference.

Steve does not name-call
or insult unless provoked.

Len does both without
provocation.

Is their behaviour wrong?

If so, then upright people
would disapprove of the
behaviour of all three.

>But you don't.

Yes, we do. We disapprove
of the name-calling, insults,
etc.

Regardless of who is the author.

You accept Len's behaviour but
condemn Steve's.
>

Of course Weenie Willy, you don't owe me a thing, 'snot even a
discussion. Your problem is that you have yet to figure out the
relationship between bullshitting about things like your non-T5
operation and the end fed antenna you don't have and what you owe
yerself.

> Hey Brian (W3RV)...nickle says he CAN'T.

C'mon guy, a lousy NICKEL Robeson? Hell, I mentally bet a Franklin
against a Washington that he can't cut the mustard and would wimp out.
Which he's obviously done. Weenie Weenie Willy Beeper has no "end fed
wire antenna" of course or he woulda gotten on the air with it and
rendered me the neighborhood ass for challenging him to a Q with the
thing. But instead he fully met my expectations and non-performed
precisely as expected.

Whatta huge surprise. He's as predictable as the tides.

> He might get on there, have a
> good time, and then realize just how wrong he'd been all along.

Nah, he's been there, he has plenty of on-the-air time. I'm no
evangelist looking to "show him the light" plus I could care less if
he has fun or not. Point is that I offered him an opportunity to once
more prove that he's all bluster and keyboard and no radio or gonads
which is typical of his breed of lurkers in this NG. And of course he
did.

> Then he'd not be able to sleep at night worrying about what Lennie thought

>temporary effects of moving three times.

GREAT story, Dee, and it proves my point: The real problem was that you didn't
know much about ham radio, not that "the tests were too hard" or "Morse code
was a barrier". Once you knew what ham radio had to offer, you just went for
it. And it wasn't a "make spouse/parents happy" thing, but a genuine interst on
your part.

I don't think it's that big an imbalance but I agree in principle, the
physical design and execution aspects of antenna apparatus within ham
radio do tend to fall more into M.E. country than they do into E.E.
country.

When I launched the challenge somewhere around here a couple days ago
I stated that it would be most convenient for me to latch up with
Weenie Willy on 20 or 40 ssb. I knew there was no point to even
thinking about a CW contact. "Do not feed the animals" . . . 'druther
let him make an ass of himself again with his only mode.

Hear what? Hear MAN trashing twenty and 75 meters? I hear it just fine.
If you don't believe me, than do a google and see what the FCC says about
him. I venture to say he will be out of here when the FCC does not issue
his license on his application to renew in 2005.

Here's another part that didn't get into the previous post:

In modern industrial society, most of us don't produce "something"
that is lasting and tangible. As in "I built that!" Most people's jobs
are as part of a much larger team, where they perform a specific
limited function.

Of course some people (like us engineers) do get to say "We/I built
that", or in the case of EMT/health care people "We/I saved that
person's life/health/delivered that baby" etc. But most of modern life
is highly specialized and regulated, or limited by time/space/money
considerations. Heck, Americans aren't even cooking as much as they
used to (more and more meals are either eaten in restaurants, are
take-out, or are precooked heat-em-ups).

So it's understandable that many people are attracted to nonvocational
activities where they "do for themselves". Mike's hockey team may
never play at the level of the NHL or even the minor-league pro hockey
teams - but that isn't the point. Veggies grown in a home garden, or
fish you catch yourself may cost more than just buying them in the
supermarket, when you take into account all the costs - but that isn't
the point either.

And even an elaborate ham station may not meet what some people call
"professional standards" - but that isn't the point at all.

So when someone compares what we hams do to what "professionals" do,
or says we are "stuck in the past" or "using 1930s standards" - they
really don't get the point at all.

It figures you would show nervous laughter after being outed as a felon.

Hey! After doing a little more research about superskyhooks and N8WWM's
antenna scam and felony bust, and court ordered shrink..I found out
that he's also living with a felon who has lost her CPA license due
to tax fraud. (details below) Man, this N8WWM guy has real issues!

KC8QJP Lee Kathleen <---- her address is the same as N8WWM on QRZ.com

http://acc.ohio.gov/dhearing.html
http://acc.ohio.gov/bdmn0401.html
FORMAL DISCIPLINARY HEARING-KATHLEEN R. LEE
Chairman Woods noted that Kathleen Lee was issued CPA certificate 36,525
on July 15, 1998. The hearing was to consider disciplinary action
against Ms. Lee's CPA certificate pursuant to Ohio Revised Code section
4701.16(A)(5), conviction of a felony under the laws of any state or of
the United States. Ms. Lee was convicted in the United States District
Court, Northern District of Ohio of five counts of Aiding & Assisting in
Filing False Tax Returns, a violation of 26 USC 7206(2), on June 12,
2000. Ms. Lee did not appear at the hearing. The Board agreed to
deliberate the disciplinary action in a later executive session.
Action taken.
Kathleen R. Lee, CPA 4701.16(A)(5)-Convicted of aiding & assisting in
filing of false tax returns. CPA certificate revoked.

He's "predicted" that he has the "professional qualifications" to make
one simple phone call to have "authorities come take us away." :-)

I'm still waiting. Was gone over the weekend, but no "authorities'"
notices were posted on the door... :-)

I wonder if Amelia has had the same "predictions?" :-)

>> "Outside" the US Amateur Bands does not mean outside of the United
>States.
>
>Why not?
>
>Also, do radio waves respect international boundaries???

The air ace and veteran of seven hostile actions doesn't know about
radio waves and their lack of respect of human laws.

Tsk. For someone who demands all that respect, you'd think he
would get out of a radio hobby? :-)

>> And as of today, Lennie still does not have a license to operate INSIDE
>> the Amateur Bands (of ANY country). Nor does he have a license to transmit
>> OUTSIDE the US Amateur Bands without an FCC issued station license. (As a
>US
>> Citizen, a foreign license of ANY nature is useless in the United States
>except
>> as a keepsake for Lennie...)
>>
>> 73
>>
>> Steve, K4YZ

Blabber, blabber by the gunnery nurse...who has NO AUTHORIZATION
to "operate" OUTSIDE of the amateur bands. :-)

Tsk, tsk. All that "authorization" rage! :-)

>There are lots and lots and lots of JA's with HK2 and KH6 licenses.
>Why is it not possible that Len has a Japanese or Mexican or UK
>license?

No such possibility.

Actually, the Canadian rules are much better towards the ham hobby,
and look more attractive when compared to U.S. rules. Interesting.

No offense to Leo, but Canada has something called "snow" and
"rain" in the winter season. Not attractive to me. :-)

>Maybe he has a UK license and is licensed to operate in the MF bands
>where the U.S. Amateur Radio Service has no authorizations.

There's no "maybes."

My self-assigned task was simply to advocate the removal of the
morse code test for any U.S. radio license. No more, no less, but
a bunch of overly-prideful super radio extras think their Way of Life
is threatened and must "do battle." :-)

Removal of the code test would remove Life as They Know It in
ham radio.

No more brag claims about being the perfect morse operator, etc.

That alone has struck terror into their individual psyches. Tsk.

[in nursie's case, all his multiple personalities...]

>You need to brush up on your foreign amateur radio rules before
>shooting off your mouth again.

So far he's been shooting blanks. Lots and lots of flash and bang
but nothing lasting in the way of damage.

I'll just have to keep waiting for the results of that "phone call."

Hi hi.

I'm in the United States of America.

Really. California is just one of the 50 states of the USA. :-)

I've been into Mexico and Canada. Nice places. Good
neighbors.

>> I've not said a single word about another country's "rules and regs of
>> amateurism".

Nursie is a Gunnery Nurse! He is also a PCTA extra. He doesn't have
to do a damn (excuse me, "darn") thing about what others demand!

Says so in his Oath of Allegiance or something that he vowed when
he joined the "service." [of amateur radio]

He is a veteran of seven hostile actions...knows who runs MARS...
and has the "professional qualifications" to make simple phone
calls to "authorities" to have them pick me or you up.

Not only that, we must wait in fear for bricks to come flying through
our windows or our wives terrorized!

Nursie has "threatened!"

<yawn>

>notwithstanding?)

Hmmm..."context of this thread" is all about "my having authorization
inside or outside of the USA?"

Could have sworn that the subject thread concerned "CANADIAN No
Code Proposal" which was open for comment...by Canadians.

Nursie stepped in and had to misdirect everything to his fabulous
FIGHT with each and every person who disagrees with him. Tsk.

It isn't. But it IS the non-answer expected.

PCTA just don't have much validity in their reasons of keeping
the code test in regulations.

They are all into the fantasy of "brotherhood" in the "fraternity."

And of "service to their country" by engaging in a hobby...

>>>ESPECIALLY when he is so blatantly wrong on so many occassions.
>>
>>
>> Then point out the errors without the name calling.

Absolutely. Show ALL NCTA the "Error of their Ways!"

Hi hi.

Everything about removing the morse code test is an "Error"
as well as Heresy and an Abomination to the Ham Gods.

>>>> I also believe that for good or bad, you enjoy it to a certain extent.
>>>
>>> Only that it lends some balance to his mistruthfulness and deceit.
>>
>>
>> When you call him "Lennie" and "anderscum" and go off on his wife or
>whatever,
>> it undermines *your* credibility. Which is just what he wants.

Tsk. Not what "I" want.

PCTA are NEVER "wrong." Never.

Anything said against them is an "error." Hi hi.

> No. good guess, but that was an exchange he had with Bessie Braddock, a

>House of Commons member from Liverpool.

UK regulations came into the thread?

Tsk. Nice misdirection, but still misdirection.

>>> Lennie did one active duty tour in the Army. Good for him.
>>>
>>> But I know people who have made far greater contributions to the United
>>>States who never left thier home state than Lennie ever hoped to "passing
>1.2
>>>million messages at ADA in 1953".
>>
>> Len and over 700 other military personnel there at the time...

Jimmie wasn't there. Jimmie wasn't ever in ANY military.

But Jimmie Knows The Truth about Everything and won't hesitate
to call any NCTA "in Error."

Kellie was never in any military.

Kellies also "knows truth."

>>>That's what get's his goat. The really sad thing is that Lennie COULD
>>>be in that same boat...but just hasn't got the guts to be anything other
>than
>>>what he is now...bitter and angry.
>>
>>
>> What makes you think Len is bitter or angry? I don't see that at all.
>
> Hard to say, Jim. I don't think posts such as his come from a sense of
>being in harmony with the world, tho'!

"In harmony with the world?"

Is the ARRL now expounding some kind of New Age thing for all hams?

Tsk, tsk. The "world" is that of the morsemen's fantasizing of yesterday.

If you want some real fantasy with buck attached, check into Paul Crouch's TBN (Trinity Broadcasting Network). Paul Crouch started out as a licensed radio amateur...parlayed radio into nearly a billion-dollar asset "religious" organization with laying on of green hands to all his "ministry."

Crouch's rationality for greed and avarice is "God's Word."

TBN's "ministry" gives the flock God's Word and the flock give their money to TBN and Crouch.

There's a religious parallel there. Like all hams of today MUST follow the Old Teachings...as if they were the Word of God (which they aren't). If you worship hobbies that way, you can call all non-believers (in the old teachings of hamme) as "out of harmony" (crazy in a supposedly civilized way).

Continue to support the Archaic Radiotelegraphy Society. It's your "harmony."

>Hellooooooooo?????????
>
>Steve's just lucky that Len doesn't pick up the phone!!!

Actually, I did. Answered a wrong number.

Not actually a wrong number. Was a telemarketer. Telemarketer
was on the "do not call" list.

They got reported to the FCC for violating the telephone spam rules.

>> >> So you guys have a relationship. It's a pretty strange one, made easier

>>
>> Of course. Now think what his real purpose could be. Here's a hint: It's
>not
>> about making amateur radio better or advancing it
>
>(hint: nor is yours)

Gosh. A long time ago I stated that all I was advocating was a removal
of the morse code test from a license test.

Lots of the Believers in here didn't believe that.

Lot's wife, too...

Tsk. I should have posted the Bans on the doorway of the Church
of St. Hiram. [something like old Marty L. did long ago]

The mighty macho morsemen might have believed that. Hi hi.

>> >>>Lennie loves to berate othrs for "assuming", "rank and priviledge",
>> >>>and
>> >>> swears he does NOT berate others for thier services regardless.
>

"Their" "sevices to 'thier' country" by virtue of engaging in a hobby.

Hard to beat rationalizations like that.

>> That's been misproven repeatedly. Just google up the famous "sphincters
>post",
>> where he berated and denigrated a US Coast Guard radio operator for his
>> recollections of his duties at NPM.
>
>The guy who sold out his PO box to Deignan the callsign collector?
>
>Now there's someone who contributes to the state of the art.

Real good example of modern-day ham "ethics" and "nobility."

That's how he got to be a "lecturer in mathematics at a university"
(just another teacher in a junior college).

Gotta be careful. Said seller is one of the nabobs with the 'Net and
has some "authority" on this newsgroup along with Paul Schleck.

>> >>I do not have now, and I never did have any military rank. That needs

More than Jimmie did.

>> > But I know people who have made far greater contributions to the
>United
>> >States who never left thier home state than Lennie ever hoped to "passing
>1.2
>> >million messages at ADA in 1953".
>
>Name them and "thier" deeds.

ADA did about 220 thousand messages a month in 1955. Anyone
can estimate what one shift's responsibility was.

We didn't sit around cross-checking messages like a QSL Bureau.
We just sent and received them, working 24/7 regardless of what
the cashew-cruncher said. Duty was done.

Only about 300 of the Battalion were actively involved in ADA
operations, the rest in other Signal tasks at Far East Command

Headquarters. The photographic services company helped earn
the Battalions' Presidential Unit Citation (we got two of those).
[nursie didn't approve either citation...probably because of not
being born yet...hi hi]

But...*my* serving there was not the point. The real POINT was
that the U.S. military did NOT use "CW" for the majority of
messaging necessary to maintain a worldwide military. The U.S.
military of 50 years ago relied on teleprinter to do that. Teleprinter
was fast, reliable, as close to error-free as possible, and could
work without interruptions (save to change paper, tape, ribbons).

Manual morse telegraphy was still used by the USN and USCG of
50 years ago, but on shipboard. Those were relatively small
stations. USN networks of fixed-point to fixed-point were still relying
on teleprinter for the mass of necessary messaging...and for the
on-line encryption and decryption of sensitive material, something
they pioneered more than 60 years ago.

Olde-tyme hammes chafe at such reality. They have no real
comeback but instead misdirect to their own "ranks and statuses"
(if they had any) and old, old myths of morse to justify morse
testing for hobbyists of today. Those that can do neither come
out with personal insults at those pointing out reality of the past
or thinly-disguised insults they claim as "civil."

>I see a broken down Marine, who tragically lost a child, now extremely
>bitter and angry.
>
>I see Kelly suggest I take my children to Somalia.
>
>Is there any middle ground with you guys?

"Thier" way or the highway. Do code or die!

NO middle ground.

Obey the ARRL and the teachings of the Church of St. Hiram.

>> What makes you think Len is bitter or angry? I don't see that at all.
>>
>> 73 de Jim, N2EY
>
>I'm just waitng for that one.

Heh...the last time I was "bitter" was during a visit to Angostura.

Hmmm...I'm a retired person with a comfortable income, living with
my wife (who was my high school sweetheart) in a nice house that
has long since been mortage-free. I have a nice workshop in the
center of the house (inside, not consigned to a cold/hot garage) and
have the time and money to play with radio-electronics. I've "proved"
myself in the military, then the workplace, don't have to have rank,

status, or some artificial privileges for a hobby radio activity.

"Bitter?" I doubt it. Old, yes. If one survives a long time on earth, that is what one achieves. :-)

It IS fun to watch all the posturing and preening in here, though, all the chest-pounding and pseudo-religious beliefs manifested. It IS fun to poke some holes in that posturing, preening, and pounding. Tsk. The posturers can't stand up straight on subjects but have to resort to pejoratives on the "pokers." [their problem, not mine]

All that about a HOBBY. Tsk. Hi hi.

But, but, but...

amateur radio is supposed to have a reputation for innovation.

Steve, why don't you put it in context for us.

Set the record straight about how you know the the mind of someone you don't even know, who is going to do terrible things to Len and his wife. But whoever this mystery person is, it's not you because you're such a nice guy that you couldn't even think of such a thing. Hi, hi!

All because Len is "shooting off his mouth."

3773. US Licensing Restructuring ??? When ???

Newsgroup: rec.radio.amateur.policy

What's going on here ... the talk of restructuring to remove morse code requirements has been going on for over 18 months. Many, many countries have already removed the morse code requirement to gain access to HF. Sure there's been a lot of backlash from those who still want to keep code alive. I know this is the government, but, what is taking so long? Can't they come to some decision quickly. Anyone have a proposed timeline of when this will be settled.

I did, but it was last year!!

Maybe someone in the FCC is a pro code test ham who is delaying the
process? The FCC in general has been in favour of removing the requirement
for a long time.

The US may be the last country to abolish the code test, the way things are
going. Mind you, AFAIK the code test has still not been abolished in Spain
or Italy(?), although I don't think there's a code test anywhere else much
in Europe anymore.

Well, I sure did find a lot about YOU and the FCC when I did a Google
Search.

You need to take care of your own problems, before you go round saying
others are the problem.

And how does Heil do this? Has he discovered something that keeps
people out? You post here, how is that?

You do not make any sense.

> Problem is that this is an open forum whether He likes it or not.

Yes, and you answer your own statement.

> He doesn't like it, ergo the usual spew of denigrations to all that
> don't think like He. <shrug>

Ahh, a spew of denigrations is bad, yet your diohrhetoric of
denigrations is acceptable.

Student, prepare a report of no less than 500 words on the validity of
your statement including the differences between his statements and
yours, and why your denigrations are acceptable.

> Following Heilian Rules in amateur radio policy newsgroup posting,

I think the hams shot themselves in the foot on this one. There have been at least 18 petitions regarding code/no-code and restructuring submitted to the FCC. Each one of these had to be opened to comments. The FCC will have to rule on each petition and then take time to digest them and consolidate into a Notice of Proposed Rulemaking should they choose to proceed. Then this NPR will have to be open to comments for awhile. On top of that keep in mind that the FCC is drastically understaffed. Finally, the FCC implemented a major restructuring in the year 2000. They may simply not want to make any changes this soon.

Besides, how often (except in times of war) have you seen the government do anything quickly.

I estimated July of 2005 and am beginning to think that even that was not a conservative enough guess.

Dee D. Flint, N8UZE

I'll start commenting from here, because this is the first part of the
post you are replying to that is from me, despite what it says at the top.

I didn't know that Winston Churchill had conversations with Bessie
Braddock about Ham regulations. You would think we would get more
publicity on that! 8^)

> Tsk. Nice misdirection, but still misdirection.

Just a direction, noting else. If you want to talk about Churchill, I'd
be happy to. Quite a character!

I was never "in" any either. Is that a problem?

> But Jimmie Knows The Truth about Everything and won't hesitate
> to call any NCTA "in Error."

I've disagreed with him and he's admitted when he was wrong, or if not
wrong, when I've had a good point. He's also pointed out when he thinks
I'm wrong too.

> Kellie was never in any military.

hmmm

> Kellies also "knows truth."

Might be a conspiracy going here Lenover21!

Respectfully, I disagree. REspectfully I think you had to do a major
stretch for that analogy.

> Continue to support the Archaic Radiotelegraphy Society. It's your
> "harmony."

I like my Harmony with onions, and maybe a bit of hot pepper, sautï¿½ed
with butter. Yuuummmmy! ;^)

But seriously, if you are happy this way, then its all good! 8^)

Hey Len, I've been holding the fort down for a few days - with one hand tied behind my back. I can't believe how easy it's been. Steve drags his wife into this, Dave thinks CQ is a membership organization, and Kelly want to get me on the air so he can bend me over. Maybe I'll postpone pulling a Cecil for a little while longer.

Anyway, can you believe this fool drags his wife into this? So far nobody has made fun of her "Old Timey" call sign. Hope it stays that way. Notice who her QSL manager is??? ;^)

Didn't Arnie Macey's wife come on here a few times and straighten us all out?

I could be wrong. Been wrong before.

>Maybe someone in the FCC is a pro code test ham who is delaying the
>process? The FCC in general has been in favour of removing the requirement
>for a long time.

Alun, despite the protestations of the olde-tyme hammes, the FCC isn't
much interested in favoring a hobby activity. Never has been despite
what the league has said in their own self-serving propaganda.

Apparently some of the movers and shakers in the FCC's higher
echelons want a "consensus of the community" or some such
idealistic blatherphrase. If "enough agree" one way or the other, they
might decide. Or might not. Ham radio (a hobby) isn't high on their
things-to-do-today ranking.

The ARRL isn't helping matters any. They insist and insist on having
some form of code testing there. But, the ARRL is a minority
group in U.S. amateur radio and can't possibly get a valid ranking as
a majority opinion maker. [they shot themselves in the foot on that
membership thing long ago but aren't able to sense the pain...]

>The US may be the last country to abolish the code test, the way things are
>going. Mind you, AFAIK the code test has still not been abolished in Spain
>or Italy(?), although I don't think there's a code test anywhere else much
>in Europe anymore.

The olde-tyme hammes of yesteryear sound their protest to the
judges! They demand a recount! [slowly they begin their chant to
the accompanyment of balalaikas...]

The Archaic Radiotelegraphy Society stumbles on...

Not needed. LOTS of producers will be willing to negotiate now
that the Emmys are over. The Writer-Producers Guild combined
investment building is on Hollywood Way close to the Magnolia
intersection...just a whoop and a holler from my place. :-)

Better than trying to sell a "security camera taping." :-)

I seem to remember Mrs. Nursie allegedly coming in here for one
message and telling everyone that Yell-yell was just such a nice
person...or whatever. Was a long time ago in here.

Of course, there were NO authenticators to prove any of that. :-)

PCTA extras "never lie" (according to them). [ahem...]

We all MUST "believe" them, like they "always tell the truth."

Like Quitfun and Deoderant Voice of God are "real hams."

Of course. :-)

Maybe. Or maybe it's just not a high priority to FCC.

>The FCC in general has been in favour of removing the requirement
>for a long time.

That's what I thought, based on the Report and Order to 98-143. But maybe
that's changedsince 1999.

>The US may be the last country to abolish the code test, the way things are
>going. Mind you, AFAIK the code test has still not been abolished in Spain
>or Italy(?), although I don't think there's a code test anywhere else much
>in Europe anymore.

What about the former "Soviet Bloc" countries? Scandinavia? How about New
Zealand, Asia, Africa, South America?

Canada is only now proposing to change the code test rules. And Japan, long the
poster country for no-codetest-HF ham licenses, hasn't changed anything.

Is the 5 wpm test really such a big deal?

No, it's only 14 months. WRC-2003 changed the treaty in July 2003

>Many, many countries
>have already removed the morse code requirement to gain access to HF.

Not really. Count 'em up - they are but a small fraction of the countries who
have retained the requirement.

>Sure
>there's been a lot of backlash from those who still want to keep code alive.
>I know this is the government, but, what is taking so long? Can't they come
>to some decision quickly.

I think that FCC had the authority to just drop Element 1 back in July 2003.
But they decided to go through the entire regulatory process, which takes time.
And it's just not a high priority to FCC.

In the 14 months since last July, there have been well over a dozen different
restructuring proposals to FCC from various groups and individuals. They range
from as simple as "drop the code test and leave everything else alone" to
major renovations including new license classes, subband changes, etc. Each and
every proposal I know of has been assigned an RM number, put on the public
record, opened for public comment, etc. Eventually the FCC will generate an
NPRM from all that info, there will be more comments and reply comments and
eventually the rules may change. Or not.

Kindly note that "other countries" don't generally lead the U.S.
around by it's nose. The U.S. seldom blindly buys into "many many
foreign goverments'"internal policies. We ain't EU/UN sheep. Take your
pick.

> Sure
> there's been a lot of backlash from those who still want to keep code alive.

It's not a "backlash", a very large precentage of the U.S. ham
population favors the retention of the code test. The FCC is quite
aware of this divide within the hobby and as a result continues to let
the matter cook on one of their sub-basement back burners until they
manage to get back to the matter. Typical bush-league bureaucratic
work and aggravation avoidance ploy. Keeps their inbox flak & spam
levels down.

> I know this is the government, but, what is taking so long?

Because the public has no vested interest at all in whether the ham
code test goes away or not. The FCC has *much* bigger fish to fry with
it's scarce resources. For instance the public needs the FCC to focus
it's assets on dramatically reshuffling the whole upper RF spectrum to
accomodate wireless broadband access to the Internet far more than the
public needs the FCC to diddle with rules changes which allow more
codeless hobbyists access to the HF ham bands.

What exactly was that you found the 'Mr. Ham'???

You mean the one where I was accused of indecent, profanity and racial
slurs? Did you notice that was many months ago, and that nothing was done
about it? Did you ever consider it is just some BS sent to the FCC by some
malcontent like yourself?

When I get anything in writting from the FCC I'm sure you will be glad to
report it.

Like I give a rip what some un-identified malcontent has to say.

> country.

Point is, the main problems are mechanical. As in where does it go,
how do I attach it to the house, where do I get the components without
paying big bucks. All of which can be answered with some thought,
knolwedge and experience.

> > But of course to get anyone's help, it pays to ask in a nice way and

The point here is that, when directly asked, ol' Cecil made good. He said he was an antenna guru and "CW expert" (yes, he said he was a "CW expert") and that Morse was his "favorite fun mode". So when somebody asked for a sked, he was there. No excuses or shaggy-dog stories, he showed up with a good signal and worked everybody who could hear him. Stand-up guy.

As predicted, Mr. Burke refuses your request, and tries to make it look like you are the bad guy.

Most of the countries where the code test has been dropped do not
have the same requirement for rules changes that the US has, such as
consideration of public input and comments, publication of notice of
rulemaking, petitions for reconsideration and court appeals, etc.

They just DO it ..... (usually because someone in the regulatory
Administration thinks that it is a good thing to do without public
input....)

The proposals to keep code for extras but not generals probably
make little sense to the FCC. The main attraction of removing
the code test completely is less regulatory burden on everyone.
And that no other service uses Morse code anymore doesn't
help pro coders much either.

>"Mama Dee" andothers.

You miss the point, Steve. The purpose of r.r.a.p. is no longer
discussion of policy, or learning something, or study of communications
theory.

The purpose is to FIGHT and to denegrate the dignity of all who do not
agree with you! Any other post is off topic and is not welcome here.

Get with the program. No one is "mistaken" or "partially correct" on
r.r.a.p. They either 100% totally agree with you, or they are "a lying,
scum sucking, bottom feeding no-code beeper." There is no in between,
and there must be at least one of each in every conversation here.
Anything which resembles a rational exchange of ideas and useful
information will either be ignored, or some enterprising induhvidual
will hijack the thread and turn it into an argument about Morse. No
other "Policy" conversation is allowed to survive unmolested.

Hmmm? I've never been to a Moose, Elks, Eagles or Lions club. I
don't think they are Veteran's organizations, so I wonder what they
brag about?

Probably bragging about "thier" real military experience!

Mr. Baxter has been asking me for a interview for a least a year now.
Probably more, I pay very limited attention to him.

As far as I am concerned K1MAN is a basic QRMer. Has no redeming value, and
is a general pain in the ass.

My contributing anything, other than telling him what a LID and loser he is, is highly unlikely. I have NO INTENTION of helping him trash ham radio.

Perhaps you, Mr. Ham Radio would be more inclined to help him destroy ham radio.

Your choice.

>NPRM from all that info, there will be more comments and reply comments and
>eventually the rules may change. Or not.

Yes, and eventually the world will end...or not. :-)

To be informative, you could have named the Petitions for Rule Making in their number groups (three groups in all), when they were released (again in three groups) and how to access them. All are still on public viewing by anyone, either at the FCC Reading Room or over the Internet at the FCC ECFS (Electronic Comment Filing System).

You COULD have given that information...but did not.

Instead there was some kind of assortment of undetailed facts which were obvious but uninformative. That is pretense at expertise, a sort of show-off of words rattled off to make it sound like you know what you are about. But they aren't helpful to those unaquainted of the facts, are they?

Naturally, you will launch into a tirade of "you are wrongs!" at being negatively criticized. That is also Standard Operating Procedure in here. :-) [PCTA extras are always right, all others "wrong"...:-)]

Consider this: Amateur radio is communications. With all the near-instant communications capability of radio amateurs, you would think that all would have found out about the 18 petitions for rule making within twelve months. Apparently not. You depend on a single source for all the "information," the ARRL bulletins and news...or various rumors (and myths) propagated across the Internet. So, what are all those radios good for? Making casual quick contacts which you all amplify to "making lifelong friends" via a 5-minute QSO? Having "radio sport" of making the most contacts in a given time?

But, not to worry. All those who are licensed at the "top" class now will be grandfathered to continue in U.S. ham radio. You PCTA

extras will never be affected by the presence or absence of a morse code test. That only affects newcomers. "Drudges," newbies, those who you PCTA extras allege are "still wet behind the ears."

Isn't the wind cold at those high altitudes of Mt. Olympus? Tsk.

Alun, Kelly's remarks are "civil discourse" of PCTA extras. :-)

As a sidelight, Ellis Island has been closed for immigration
purposes for years. My mother and her family came through
there in 1924, my father and his brother through there in 1928.
Both parents became naturalized U.S. citizens later.

Apparently the "Kelly" surname is native to North America,
judging by the tenor of the "civil discourse." :-)

[this is beginning to sound like the PCTA are a branch of
the DAR...:-)]

Tsk, tsk, tsk. "Mr. Burke" remembers the gist of the alleged
"conversation" very well...as did I...as did most readers. :-)

Notice how "Mr. Miccolis" misremembers and distorts all the
invective and general tuff-guy tawk used by "Mr. Kelly."

That, according to "Mr. Miccolis" must be "civil discourse." :-)

Like it or no, "Mr. Miccolis," there is bound to be some sarcastic
return to "Mr. Kelly's" more-so sarcastic commentary. Try to
understand that.

Acknowledged. However, that does not forgive "Mr. Kelly's"
blatant disregard of "civil discourse" by using denigrating and
insulting words used in a poor imitation of the Soprano's TV
show dialogue.

>Always offer a choice.

Use of "Weenie Willy" and "do not feed the animals" is "civil
discourse?

Sorry, that's just the kind of dialogue demanded by the PCTA extras
who think they are the hots of radio. Not to mention all others being
just "drudges" in the words of the elitist aristocrats of hum radio.

>> > >QSL?

>Stand-up guy.

So, it didn't matter that others (3 years ago) might have had free-time
off scheduling problems?

Only the "stand-up guys" showed up? All others are "drudges" who aren't worth anything and didn't show up?

My, my, aren't you condescending to earth people?

>As predicted, Mr. Burke refuses your request, and tries to make it
>look like you are the bad guy.

"Request?!?"

That was no "request." It was a simple school-yard challenge. Kid stuff. Unseemly for anyone long into adulthood.

Apparently that's what the PCTA think is "right" for modern ham radio - playing kiddie games of fighting challenges in the school yard to "demonstrate their strength/superiority?"

Actually, "Mr. Miccolis" comments look more like some modern-day "'Hood" puffery about "stand-up guys" who "make 'requests'".

As usual, all NCTA are depicted by the PCTA extras as lesser human beings unfit to associate with Their Highnesses. <yawn>

But Phil, after the opening of the No Code Tech in 91 along with the FCC's stated psoition on the relevence of Code testing, along with the tons of papaer they've received on it already, just how many more "hearings" or comments do they need?

Au contraire, Master Chief.

I have a great many other discussions that are nothing of the kind. But then the "other" people involved tend to act civilly, refrain from the use of diminutives and generally tend to be open minded sorts. Nor do they create stories that are so easily disporven, make boasts of things done that can't be verified, nor do they boldfaced misrepresent the truth.

And I must add...All of your "replies" vis-a-vis anything I have posted in ANY thread has been of this angry, stick-it-in-your-ear kinda stuff.

I find it a bit hypocritical that you chastise me for that sort of thing, all-the-while participating in it yourself.

>Get with the program. No one is "mistaken" or "partially correct" on
>r.r.a.p.

Sure they are. We all are at one time or another. Even you.

>They either 100% totally agree with you, or they are "a lying,
>scum sucking, bottom feeding no-code beeper."

Another misrepresentation of the truth, Master Chief.

>There is no in between,

I'm not the "moderator" in here. This is an open forum.

Problem is, a few do NOT want that...they want a cozy little chat
room filled only with their own kine. They are the ones polluting.

>> Not quite. Like Moose, Elk, Eagles, Lions type of clubs, all full
>> of brave macho types bragging it up at the club bar.
>
> Now that tells us much.

If you had been to one of those, then you do not need to be "told"
about it. It is self-evident. Merely observe. That's all that's
necessary.

If you haven't been to a fraternal order hall with bar, then think of a
conclave of PCTA self-described wire-pullers and add some alky.
Same thing.

>> OBEY them. The PCTA extras RULE! Hi hi.
>
> Since when? And what do they rule anyhow?

Since the PCTA first had their hobby-orgasm over a code key.
They think that all radio communications revolves around morse
code and morsemanship. It hasn't been so for decades, but
they are Believers and will not listen to reason.

Governments (and all newsgroupies) should obey Them (the
PCTA that is) simply because the PCTA are.

If the PCTA feel it so necessary to make all ham radio newcomers
learn morse to get a license, they should petition the FCC to rename
the ARS to what suits them - Archaic Radiotelegraphy Society.

That should end any "dispute." The PCTA get what they want.
The name is readjusted to what it had become in testing.

Amateur radio is just another hobby involving electronics. There are dozens-plus hobbies involving electronics and that is where the electronics-interested hobbyists have gone. Most of those non-ham hobbyists don't give a damn about morse code or recreating some "pioneer days" re-enactments through constantly re-living olden days that were around before most hams of today were born.

There's only a few PCTA extras in here. But, they are resolute and quite uncivil in condemnation of all those who do not love, honor and obey morsemanship. All readers have seen that. There's lots of folks who MIGHT have come in here and made their opinions known on issues...but are hesitant to not wanting to be called nasty names by those same PCTA extras. That's the "rule" part...rule by intimidation, intimidation by any manner.

For most folks, that rule-by-intimidation isn't comfortable, isn't open, certainly isn't conducive (in any way) to discussion...the intimidation consists mostly of diss and cuss at non-morse folks, zero discussion.

> knolwedge and experience.

Wait a minnit here James, it does not take a BSME to do some
respectable "eyebolt engineering" at Home Depot in order to get a
lousy but reliable wire up. I have a ham acquaintance who is a CPA I
occasionally turn to for sources of weird/arcane/cheap parts, he's an

unbelievable walking cheap antenna parts encyclopedia. Wanna a $10
prop pitch motor? Yeah, he knows where one can be glomed.

In the field of ham antennas MEs don't really have much to offer until
it gets down to big yagis on big masts in big towers which cost big
bucks if they fail. I've done some pretty serious M.E.-type structural
analyses and optimization runs for a few locals who are into big-gun
antenna farms over the years and it's worked out well for all
involved. They usually don't compulsively jump outta bed at the first
light of dawn to see if their piles of steel and aluminum are on the
ground after some big blow moved thru the neighborhood during the
night if I did the numbers for them.

By far the biggest contributions to ham radio and electronics in
general mechanical engineers make are in the fields of component and
equipment hardware design and production methodologies and facilities.

As if.

He actually blew it twice over. Fact is that that I don't have any 40 or 20 antennas up at the moment so if he'd agreed to work me on 40 or 20 ssb I would have had one helluva scramble on my hands in order to get on freq on time.

Lordy lordy be, I'd just love to do a few rounds of Five Card Stud with him .. !

Actually, you offered him choice of time, date, frequency. He simply refused
the challenge. Which says it all. He's got plenty of time to post here but no
time for a 5 minute QSO at *his* choice of time and frequency.

Giving an on air interview would constitute broadcasting and would be in
violation of Part 97. So you want Dan to compromise his ham license to
"clear the air." Wonderful logic! NOT!

If I remember correctly, this is why the no-code Tech license was created.

Oh, want increased "privileges?" Earn them. Sometimes earning something
(Like a degree, for example.) means "learning" a few things that you may
never use.

Heaven forbid we should teach this concept to our kids. Instead they have a
whole generation of underachevers who would rather whine than achieve.
Remember the Regents!

It "puts people off," it'd almost be funny...if it weren't so sad.

I don't know why.

More than one person (meaning: other than me) has called Hans "Len with a License".

And Lennie is still a liar and you still publically admire him and condone his conduct.

Peas in the pod.

Does knowing Morse code eliminate other forms of communication,
including modern ones? Old technology and new technology can coexist
with each other.

The problem here, Mike, is that on more than one occassion Lennie HAS
demanded certain actions (or cessation of actions) from various persons.

He didn't get his way, of course, but he does take liberties with the very
same "rules" he would impose on others...

>>>> Not quite. Like Moose, Elk, Eagles, Lions type of clubs, all full

> But I'm PCTA and aren't anywhere close to that.

Protestations to the contrary, Mike, just about all of us in the "pro
code" camp have expressed and discussed other modes, activities and interests.

Lennie keeps dragging that old, tired rhetoric of his around and tries to
wave it like a tattered old battle flag.

Like MOST of his stuff, it's tired, dated and for the most part, not true.
But it makes him happy to wave it.

>> Governments (and all newsgroupies) should obey Them (the

Not in Lennie's world. Thank God it goes no farther than his own, sad and
beleagured mind.

Of course it is.

UNLESS, of course, you are a one-tour-wonder Army radio mechanic from
1953.

Then the tale warrants retelling at every opportunity.

>> There's only a few PCTA extras in here. But, they are resolute
>> and quite uncivil in condemnation of all those who do not love,
>> honor and obey morsemanship. All readers have seen that.
>
> I'm PCTA and an Extra. I respectfully disagree with that statement.

Not all readers have "seen that".

I, for one, have publically stated (and do so again here) that although I
support Morse code use AND testing, it's time is passing and it's time to move
on.

Of course Lennie ignores this (and similar comments from other posters of
similar thought) and goes right on with his assertions about how allegedly
reluctant any one is to discuss anything else.

Even more ironic is that when we DO discuss anything else, Lennie or Brian
do thier best to pull the thread into yet another "PCTA Extras Destroying The
Radio World" rant.

>> There's lots of folks who MIGHT have come in here and made their
>> opinions known on issues...but are hesitant to not wanting to be

The "diss and cuss" comes from being "dissed" and "cussed" by certain
non-Amateur aggitators. One in particular.

But who will be the first to stop? Steve will post as he is posted to,
and the other two in this sad saga will post that way until they are
ignored.

It's our very own "Middle-east" problem.

> Get with the program. No one is "mistaken" or "partially correct" on

Carl only got to reap what he sowed. He also altered his opinion to
something he said that he would never do. Nothing wrong with changing
one's mind - I do it at least three times before breakfast. (someone's
quote) But a large part of my earlier respect was based on that "never
reducing test requirements" statement. So he did a lot of credibility
erosion there.

And I respond to who I like in the group. occasionally even Lenover21,
when I'm in a puckish mood! ;^)

You are (deliberately) confusing the issue of having to learn more theory
to upgrade with the issue of learning to use CW in order to use HF phone.
This has nothing to do with teaching kids they should get something for

nothing, if that's what you are saying. But then, if you regard CW as a holy sacrament, your argument would make sense, which it doesn't.

> they need?

Doesn't matter, Steve. Once they decided to go the NPRM route, the
wheels will turn at their designated speed.

Note also that the quoted code-test positions of FCC are close to 5
years old. (The Report and Order for 98-143 was written in late 1999).
Maybe all the comments have had an impact.

If the code test is such a "barrier" to would-be hams, why aren't they
telling FCC? When you total up the comments *by author*, you find that
most people who bother to comment want to keep at least some code
testing. You also find that most commenters already have a ham
license. What you do not see are large numbers of nonhams telling FCC
that they'd become hams if the code test were removed. So wouldn't it
make sense for FCC to conclude that there are *not* a lot of people
who are "being kept out" by the code test?

I think N8UZE has a very valid point that all the proposals simply slow the machinery down. Note that NCVEC has *two* proposals!

I'm an Extra too, Len. I had a hard time learning CW upto 20 wpm and don't even use it. There are two basic ways to respond to that experience, either somehow rationalise it as a good thing(?), or realise it was a waste of time and an unnecessary barrier to others.

I don't think the code test keeps anyone out of the Amateur Radio
service.

On a somewhat related matter, I also don't think that we need a code
test to prove anyone's worthiness to operate on amateur frequencies
below 30MHz.

I have noticed that. There is a certain type that accuses others of
what they are trying to do themselves. He used to accuse me of trying to
be the moderator, and yet becomes very agitated when someone posts

something he disagrees with. Eventually it becomes a tip-off to the
person's motives.

Both of y'all aren't the sharpest sticks in the wood pile are ya?

If what K1MAN has been doing is in violation of the FCC rules, what hasn't
the FCC shut him down?

If the beloved FCC shuts K1MAN down, W1AW will have to follow suit. They
know it, I know it, and you know it too. Deal with it.

The FCC has bigger fish to fry than K1MAN. They may or may not get around
to it. Although his broadcasts clearly violate the rules whereas W1AW does
not, it is far more important that the FCC handle issues like the illegal
truckers, powerline interference, etc. So I deal with K1MAN by encouraging
people to avoid listening to him after they've had a thorough chance to
evaluate his broadcasts for themselves.

If you can't deal with the fact that K1MAN actually gets away with illegal
activity, deal with it.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but
they were over-ruled by the umpires in instant replay, who award it a
1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious. It was
poorly written, poorly executed, and was so incredibly lame as to lack
the true drawing power of a really masterful troll.

Maybe as high as a 1.6 for the intense stupidity of the premise, but a
9.8? Never!

The Armenian judges tear their hair out, throw their balalaikas down in
dismay, and perform the traditional Armenian Dismay Chant!

They demand a recount!

How many YEARS does it take the FCC to evaluate the "so called" illegal
activity? 1, 2, 5 years???

I call bull$hit, on your explanation of why the FCC hasn't discontinued the
airing of K1MAN's program. You KNOW why the FCC can't touch him. You're in
denial, and we both know it.

>
> Whoa there! That was Andersonesque!

Wrong. It is not "Andersonesque." It isn't "Brakobesque" or any
other "...esque."

Hans Brakob is just telling it like it is...in that posting...though there
is doubt of validity in a subsequent posting. .

A small clique of morse inchworms have crawled in here attempting
to be rulers.

They champion one way, their way...in whatever they talk about.

Anyone who disagrees with them are treated to personal insults,
invective, denigrations, and pejorations which go far beyond the
subject of any thread. They do not like opposition so they seek to
intimidate others. Indeed, their opinion skins are very thin and
peel away easily. Such skin cannot take transport into the world
of reality, remaining whole only if kept in their single-minded mental
world of imagination.

"Policy" for any group must be examined in the light of day, not the
darkness of mythical dominion of physical/mental force by those
wishing/needing to subjugate others.

New concepts and ideas are ill-accepted by many. Such are radical
and may have sharp points to puncture the balloons of the mythos-

believers, the over-prideful who seek rank and status to elevate their egos. Not conducive to a hobby whose "leadership" espouses friendly comradeship.

>> PCTA that is) simply because the PCTA are.
>
> that would be bad if these folk are oppressing you. But as the

>(probably) most prolific poster here, how can that be?

Tsk. You fail to understand simple sarcasm, Coslo.

No one is "oppressing" me.

I'm simply persistent and confrontational on the issue of keeping a morse code test for any radio license in this new millennium.

PCTA clearly wish to oppress those against the code test (evident from their public statements) by intimidation, personal insults, or whatever means they can use...which includes considerable fantasy and wild imaginations on their parts.

I simply point out the "error of their ways" (a metaphor) and illustrate how mythical their fraternal-order rules are...rules kept long, long after their validity has expired.

>> If the PCTA feel it so necessary to make all ham radio newcomers

>> the ARS to what suits them - Archaic Radiotelegraphy Society.
>
> Does knowing Morse code eliminate other forms of communication,
>including modern ones? Old technology and new technology can coexist
>with each other.

Irrelevant reasons.

The morse code test continues on in U.S. amateur radio regulations, absolutely required for any authorized amateur radio transmissions below 30 MHz.

No morse code test passing-for-authorization is required of any small boat owner, pilot, land mobile radio operator, broadcaster, etc.,etc., etc. operating below 30 MHz.

No morse code test passing-for-authorization is required for any military personnel operating military radios below 30 MHz.

A half century ago there was NO requirement that military personnel had to test for morsemanship to operate high-power HF transmitters using then-state-of-the-art communications techniques. All us signmalmen "got the message through" (familiar phrase of the Army Signal Corps).

Citizens Band Radio Service operating below 30 MHz became legal in 1958 in the USA, absolutely no morsemanship test involved. Not only that, CB became licenseless a few years later. [1958 is 46 years ago, back when nearly all radios still used vacuum tubes]

A half century ago, teleprinters were operating at continuous through-put of 60 WPM. A decade later that was 100 WPM and FSK band-width was decreased by half of that at 60 WPM. When solid-state electronics became more prevalent, teleprinter started to become

known as "data" with sustained rates of 300 WPM, then 1200 WPM, then 4800, 9600, and finally, 56K WPM...whether by wire or radio.

A half century ago, television in the USA was beginning to standardize on color video transmission, then adding stereophonic audio (some time after audio-only FM stereophonic transmission was standard). In time analog video-audio gave way to improved picture-and-sound digital TV with more information in the same EM bandwidth. International satellite relay of communications was an accomplished fact four decades ago and now all the "equatorial" comm sat orbital spots are filled. No dependence on the vagaries of the ionosphere to do international communications.

GPSS has been with the world (along with GLONASS) for two decades and with civilian users for over a decade, yielding precise terrestrial location determination AND precise time...all over radio. Radio clocks are available at consumer electronics stores for under $30 that update themselves automatically to precise time from several LF broadcast services. No need to tie into wire services or listen on HF for precise time...the little inexpensive radio clocks offer one-second-per-day accuracy, along with calendar information without operator assistance.

The Internet went public in 1991, 13 years ago, and spread like wild-fire to all parts of the world. Millions upon millions use the Internet daily, geographic boundaries seldom a limit, with no disturbance from the ionosphere affecting HF. It is mass communications worldwide.

Cellular telephony, enabled through radio, has become a standard means of communications for Americans. So much so that one in three Americans has a cellular telephone subscription...about 100 million using those tiny, low-microwave-radio-range, portable radios to access the telephone infrastructure.

All that while, during a veritable many-quantum-level-jumps in technology, U.S. amateur radio "qualifications" (test regulations) have required the morsemanship ability test to authorize operation below 30 MHz by amateurs. That is still required.

Can you say that U.S. amateur radio regulations (and testing) is behind the times? It most certainly is. Has been for a long time.

> I guess history must be bad, huh?

For U.S. amateur radio in comparison to the rest of the radio world, it IS "bad."

"Bad" in that it lags far beyond the state of the radio art...supported only by the radio designers and manufacturers using developments from the rest of radio to modernize amateur transceivers so that they can best "work" on-off keyed carriers a la the 1920s.

>> There's only a few PCTA extras in here. But, they are resolute
>> and quite uncivil in condemnation of all those who do not love,

>> honor and obey morsemanship. All readers have seen that.
>
> I'm PCTA and an Extra. I respectfully disagree with that statement.

That is a given. You must support your klan.

I do hope you use fitted sheets.

> At least the NCTA and interested others don't call anyone names! ;^)

Poor PCTA...they think the slightest negativism on their mythical
championship of morsemanhood is a "personal insult."

PCTA simply refuses to acknowledge that the world has advanced
and that amateur radio can no longer by "qualified" by radiotelegraphy
skill demonstrations. PCTA wound far too easily.

>> For most folks, that rule-by-intimidation isn't comfortable, isn't
>> open, certainly isn't conducive (in any way) to discussion...the
>> intimidation consists mostly of diss and cuss at non-morse folks,
>> zero discussion.
>
> hmmm, I don't see it that way at all. Well, everyone is entitled to
>their opinion.

NOT in here, according to the little clique of PCTA "regulars."

ALL must do as they had to do...or be silent. "They rule."

They try to enforce their rule by any means possible, usually that of
the personal insult against anyone differing from their exhalted
opinion. Tsk.

Not conducive to a hobby activity. More conducive to a dictatorship.

>If I remember correctly, this is why the no-code Tech license was created.

Then you should also remember that no-code-TEST Techs were
forbidden operation below 30 MHz in the USA.

Somehow some amateurs still believe in the myth that morsemanship
is "essential" (enough for "qualifications") to operate below 30 MHz.

>Oh, want increased "privileges?" Earn them. Sometimes earning something
>(Like a degree, for example.) means "learning" a few things that you may
>never use.

The alleged "need" to do morse code below 30 MHz is an artificiality.

That doesn't bother the qualifications of all those other radio services
operating below 30 MHz. Tsk, tsk.

>Heaven forbid we should teach this concept to our kids. Instead they have a
>whole generation of underachevers who would rather whine than achieve.

>Remember the Regents!

[you spelled "reagent" wrong...but that's perhaps too subtle...]

Yes, heaven forbid that ANYONE EVER be allowed to transmit
below 30 MHz without full and complete "qualifications" by testing
in morsemanship! :-)

>It "puts people off," it'd almost be funny...if it weren't so sad.

The "sadness" is that the PCTA simply can't get up to speed
on the newer technology nor do they want to change their ways.
Tsk, tsk.

Everyone must do as they do...or else! :-)

My "motive" in here is to advocate the removal of the code test for
any radio operator license.

If you must question "motives," then question all those who demand
to keep the code test long after it has served any purpose.

> I wish he'd slack off on the Morse code and give us more of the stories

>with the historical aspect.

"You can't handle the truth!" - Col. Jessup (before being arrested)

The U.S. government hasn't "slacked off" on morse code testing since
WRC-03. Test Element 1 is still a test requirement.

My last "operating involvement" with HF radio came earlier this year.

I used a small (some say "tiny") 20 W SSB HF transceiver that
many radio amateurs have purchased for themselves. I was not
operating in any amateur bands.

Radio amateurs whose only exposure to "radio" is in amateurdom
will want to ridicule and denigrate non-amateur radio operation. That's
a psychological survival trait to overcome their own ignorance and
lack of experience.

>> Like MOST of his stuff, it's tired, dated and for the most part, not
true.
>> But it makes him happy to wave it.

Tsk. An illustration of my point by another...

> I wouldn't mind actually hearing more details of that time, without the

>to me strange comparisons to Morse code users of today. I've read parts
>of his experience, but I imagine there are interesting details.

In this environment such is wasted effort.

There is a considerable body of knowledge and history compiled about
all of radio. Very little of it concerns amateur radio, which makes some
of the amateur radio lifestylers very angry. Those lifestylers were never
in that part of the radio world and want to shut their eyes and ears to it.

> Kinda makes you think that is about all they have to offer.

PCTA extras can only offer braggadoccio about their "operating
skills" and their disgust at those who don't venerate them.

> Seriously, has Lenover21 or William ever called anyone in here names,
>or made derogatory "baby talk" or whatever kind of talk it is; or
>otherwise denigrated others?
>
> Oh..... yes.......I guess they have...

Only after prolonged exposure to those who yell and yell against
all those who don't agree with them.

Unfortunately, the PCTA extras in here are so thin-skinned they
cannot abide opposition of the slightest kind. Their problem.

The question (in my opinion) that should be surfacing is: Why is
there such a prolonged talk about "how good and noble" are the
PCTA extras and "how band and wrong" are the NCTA?

Time marches on, but few march to the beat of the CQ in morse
these days. The morse code test has long since outlived its
usefulness. There is NO validity in keeping it around just because
some middle-aged wannabes had to do it over 30 years ago. None
at all.

>
> - Mike KB3EIA -

False logic, bad connections. Clean your iron, too many cold solder
joints.

Test Element 1 in the USA only involves morsemanship. Morse code
mode is the ONLY one of many - all optional - modes allowed to
U.S. amateur radio. There has never been another manual operating
test for any other mode in the 70-year history of the FCC in amateur
radio.

Morse code testing doesn't compare to any other thing but morse
code. Trying to draw analogues to other things is ridiculous...but you
knew that, didn't you?

The written part of the U.S. amateur radio test involves FCC regulations.
Those regulations include all the permissible modes and modulations
available to U.S. amateur licensees. It is logical that the written test
include something involving all those modes and modulations.

Try to remember that the FCC's test for an amateur radio license is
NOT an academic achievement test. It is NOT about how much
knowledge of radio is gained, it is all about proving the applicant to
the Commission on the Commission's standards for being licensed.

>time and an unnecessary barrier to others.

The third alternative exists: Seeing morse code's faults and the
fact that all other radio services have dropped the mode for any
communications purposes. That happened to me over a half century
ago, altered my thinking about "radio."

Way back then, I'd swallowed the mythos of morse as put forth by
the radio gurus of the mighty morse league and thought it was truth.
It turned out to (rather obviously) be a falsehood of major
proportions. A sudden dose of reality has side-effects for some,
but not really to me. Just "recode" the thinking program and
continue was my way.

I find it truly remarkable that the Pro-Code Test Advocates have
this stubborn obstinacy on forcing all newcomers to test for morse
code for below-30-MHz privileges...a half century later. Other radio
services have long since discarded such a "necessity" and many
don't even require a license test to operate some HF radios (other
than the license-free CB things). [towards the first of this year I
operated a little SGC 2020 on HF and didn't require any showing of
any license to be legal about it...the 2020 is an HF SSB transceiver,
designed by Don Stoner's and Pierre Goral's company...both sadly
SK now]

As I've said before, radio amateurs should not have to have any
dispute over the code test. If it is kept, then it would be prudent
to change the name of the "service" to something as I suggested:
Archaic Radiotelegraphy Society. Or "Service" instead of Society.
Either way, the name would fit what it has become below 30 MHz.

I find it puzzling that there is still the demand for various "classes"
beyond an entry-level one. The only validity to that is that it is an
artificiality to bolster the egos of the participants. Amateur radio
is a hobby. It isn't a professional group, not a guild, not a union,
not a working craft. Why have all those "classes" that will, auto-
matically, lead to internal conflict of some "better" than others?

Tsk. Those that have made it into the "upper" ranks can afford
to be condescending (to a fault sometimes) to others. That just

furthers the resentment. [not saying you do, Alun, you don't, but many others are that way]

The Regents are still given in NY, Phil. The Debacle to which I referred happened a year or two ago when a large percentage of NYC kids flunked it. They (Parents included.) argued that it was unnecessarily tough and culturally biased...in other words, they whined. The failing grades were thrown out. (I'm not sure if they were administered an easier exam or thrown a curve.) Had they been held back and forced to attend summer school and, dare I say, "earn" their passing grades, some college guidance counselors and subsequently some employers (Read: society as a whole.) would have been grateful.

Instead, the bar was lowered. Is this what we want to do with AR? The same AR we want to recuit youngsters into...and then teach them (by example) that if they whine long enough, they can have what they want. "Learn to earn!" Today privileges in an avocation, tomorrow wages to comfortably support a family in a fierce fiscal environment. Some whould say ther's no corrolation, but the priciples learned today will be applied tomorrow.

The FCC isn't going to waste its time or money on this LID. He will be
gone in October of 05.

Just like they do with all the other bad boys.

And what will they finally get him for? Failure to have 'good amateur
practice'.

As for your constant comments about the ARRL bulletin service. With all
respect and consideration...you are without a doubt the dumbest idiot I have
ever heard of...with the possible exception of Glenn himself.

No, Alun...I'm not deliberately confusing the issue. I'm very deliberately offering MY take on it. I believe the question was; "Is the 5 wpm test really such a big deal?" IMHO, no it is not! No confusion there.

> This has nothing to do with teaching kids they should get something for
> nothing, if that's what you are saying.

It's a lead by example thing, Alun. The principles a youngster learns in an early avocation will likely carry over intotheir later endeavors, both presonal and professional. Again, IMHO.

> But then, if you regard CW as a
> holy sacrament, your argument would make sense, which it doesn't.

Holy sacrament? Definitely not. A very cool (And challenging!) mode of operation that lends itself very well for low power comms and sheer simplicity? "Noboubtadoutit!" (A NYism, hi.)

And oh, BTW...it's not my argument, it's just my opinion.

Now Dan, why the name calling all of a sudden?

ARRL Bulletin Service, AARA Bulletin Service, both are good. A "choice" is
good. Just like having CNN, FOX, NBC, and ABC News. CBS News was
intentionally omitted from my statement.

AMERICAN AMATEUR RADIO ASSOCIATION

MISSION STATEMENT
The mission of AARA is to promote the serious side of Amateur Radio
including competent Amateur Radio response to all real and genuine
communications emergencies, the promotion of international good will,
and education with particular focus on young people with a view toward
assisting them with making better career and life choices.

Hope so.
. . . .

Dan, this is real old stuff from Wayne Green; his response to some ideas I had on stopping the K1MAN nuisance a decade ago. Perhaps some of his suggestions are still germane. Good for a laugh, if nothing else.

ak

Wayne Green W2NSD/1
WGI Center
Peterborough NH 03458

Andy:

While I can appreciate your frustration with Baxter, which I share, your approach to disenfranchising him seems to indicate that you either do not read my editorials or at least don't remember them. I've God knows how many times been quite blunt about NOT annoying the FCC with our problems. That's not only a waste of time, it's downright dangerous... and can cause far more trouble than poor little Baxter. Please remember that we keep trying to convince the FCC that we are self-regulating. Note the term "self."

If a few hams ever want to get rid of Baxter that's not all that difficult... and you don't even have to pay a hit man to clean off 14,275. All it takes is a little creativity and some coordinated effort.

As a matter of fact it would be fun to wipe out Baxter. And you wouldn't even have to have a small group of like-minded hams drive to Maine with hack

saws for his coax and tower or a concentrated campaign to turn his neighbors against him with propaganda. No, all it would take is a few hams with good signals and some coordination.

I'm sure you can come up with much more fitting tortures for Baxter than anything I could dream up, but my mind turns to getting the channel about ten minutes before his broadcasts with my own anti-IARN broadcasts. I'll bet I could come up with some material which would burn Baxter, yet would not quite be actionable. Or I might tape one of his broadcasts and just repeat it as a "service" right on top of him and wipe him out. I've got as good a signal as anyone and I'm only a couple hundred miles from him. Knowing the love they have for him in Maine I'm sure you can find one, two or even three strong stations fairly near him to join in the effort to "help" him get his broadcasts out.

Of course if you don't know anyone capable of outsmarting Baxter, then you have no choice but to give up and take up stamp collecting. Baxter may be loud, but I haven't yet seen any signs of a three digit IQ behind the mess he's been making for several years.

If you do decide to actually do something instead of wasting your time on the FCC and ARRL, please let me know.

Cheers ...
Wayne

They still have them but a recent news article that I saw mentioned that
they are considering making the exams simpler. Not enough students are
taking them and on top of that the students' average scores have dropped
over the years.

Well I could not care less if I ever used CW again. That being said, I would like some insight on why a person would not get a ham license simply because of a Morse code test. To me, you just do what you need to do. What are the positive aspects of people that refuse to "get" something that included something that they didn't want to do?

I guess it all comes down to how knowledgeable a newcomer is.
>
>And I'm not certain that the CSCE will apply to the new licensing
>scheme.

There's never been a case I know of where a non-expired CSCE was not useful for
a license class that was still available to new issues.

>And of course, the year and a day might (probably, in my
>opinion) pass before the new testing regimen takes effect, in which case
>you will have to take the tests again, and will have wasted the money on
>the old tests.

That's the risk. Heck, back in 1968 and 1970 I paid a total of $27 ($9 three times) to get the Tech, Advanced and Extra. If I'd waited a little longer, I could have avoided the test fees entirely. $27 was a lot of money to a kid back then.

>>>Let's compare the situation to when the Governor of PA had the temporary

>
>Specific dates aren't the issue, at least with what I am trying to say.
>Its the concept of the thing. If you only wait for a while (the Morse
>code requirement goes away, or the tax is suspended) you will get (the
>amateur radio license or the computer) for a lot (less effort or less money)

Yet people buy cars before the end-of-the-model-year sales, and things like computers at regular price. Back in 1997 I bought a PC setup for $2500 - 200 MHz 32 MB w/4gig HD, 17" monitor, 56k modem, inkjet printer, etc. Today the whole setup is worth maybe $100 on a good day (most of that is the Trinitron monitor), and you can get a system that has 10 times more of almost everything for about $500. If only I'd waited...

>My statement is that some people will wait for reduced entry
>requirements. Most people think change happens quickly. SO they say "I
>will wait". Then chaneg doesn't occur in a short time. Then they lose
>interest and go away without ever becoming a Ham.

I submit to you that the person who loses interest that easily would be dissuaded by the difficulty of putting up an HF antenna (even a simple endfed wire), or the cost of ham gear (while the values keep improving, the prices stay about the same), or a dozen other issues.
>
>And I don't completely buy that the person who does this wasn't *really*
>interested. I only recently became a Ham - around 5 years now. I had no
>real interest in many of the things that Hams do when I got started. I
>discovered the joys only after some time had passed.

Of course - but you *knew* you wanted to be a ham, and the fact that the tests might change or the equipment might get cheaper or the sunspots might get better or worse didn't really affect what you did.
>

>
Not at all!

Down here in southeast PA, almost everyone who understands taxation knows that
there's no sales tax in DE, while we PA folk pay 6%. (You don't want to know
about New York State!) The state line is a half-hour from most of Philly, an
hour from the most-northerly parts. Yet the local malls and stores aren't
losing significant business to their DE counterparts.

Oddly enough, more folks *will* cross the line into NJ or MD to buy cheaper
liquor, even though doing so is illegal while crossing the line to buy a
computer is not.

Nope. Of course they might have a reward for those who pass....\

One final note:

If the whole code test/limbo thing is real, why are there so few nonhams
telling FCC that they'd get a license and do great things in ham radio, except
for the code test? The vast majority of folks who make that claim are already
licensed....

I tend to think that a single class of licence would be a good idea, although many people argue that there should also be a beginner's licence, and I am not totally opposed to that. I don't see a genuine need for more than two licences, though. Also, I don't think subband restrictions by licence class make any sense whatsoever, as the propagation is the same for the whole band.

Ideally, I would give an entry level licence very restricted power on the whole extent of a limited number of bands in different parts of the spectrum. Needless to say, I wouldn't have a code test for any licence. The problem would be the transition from the present situation to such a scheme. The vested interests of those currently licenced probably make this idea impracticable.

I doubt there are ANY "nonhams telling FCC that they'd get a
license and do great things in ham radio!" :-)

That's not the context of Comments on RMs, NPRMs, etc.

If you look at those "claim" Comments, those already-licensed folk
are very busy staking claims of what they HAD done.

So, do you have a point at all or are you just chatting in the chat
room to avoid using your ham radios?

All those subbands are simply for "staking out territory."

None of that elaborate U.S. subdivision would be possible without
the modern frequency synthesizers that were NOT developed for
amateur radio but adopted for that particular market.

I doubt that even the most ivy-decorated in here could explain
how to make a PLL subsystem that achieves 10 Hz resolution
using 10 KHz references for their PFD. I wouldn't even bother
asking them if they knew how a DDS works... :-)

>> to be rulers.
>
> As have a small group of Nocoder people.

Tsk. A few individuals objecting to the morse myths propagated
for all these many decades?

Who is "ruling?" [answer rhetorical]

The "rulers" are those who are here on a regular basis, loudly
proclaiming the virtues and nobility of mighty morse and how they
are so "good and proper" because they use morse. Look at the
invective they hurl at the few NCTA in here.

Poor babies, those PCTA. Tsk. Tsk. Tsk.

>> They champion one way, their way...in whatever they talk about.

>

> Wow! PCTA's eh?

Absolutely.

If you feel so outraged, then, by all means, petition the FCC to change the name of the ARS to the Archaic Radiotelegraphy Society.

That new name would FIT very well seeing as that's what it takes to get a U.S. amateur radio license having below-30-MHz privileges.

>> expert") and that Morse was his "favorite fun mode".
>
>I said that I wanted to build an antenna, that I am not a cw expert,
>and that Morse is not my favorite mode.

Jimmie doesn't understand that kind of answer.

Rule one in here: If a PCTA extra "challenges" anyone, that
anyone must OBEY or be cast out with all untouchables.

>So when somebody
>> asked for a sked, he was there.
>
>And I said "No."

They cannot take a "No."

A No answer is a no-no.

> No excuses or shaggy-dog stories, he
>> showed up with a good signal and worked everybody who could hear him.
>
>No excuses here, either.

Jimmie still doesn't like it, expects all to be on the PCTA extra beck
and call.

>> Stand-up guy.
>
>Thank you.

I don't think they like "stand-up" in here. That stuff is comedy.
The PCTA extras in here are very, very serious about their "work."
All are required to "work" them or they get unruly.

>> As predicted, Mr. Burke refuses your request,
>
>Why would I accept it?

Jimmie still doesn't understand the "challenge" was really a command.

> and tries to make it
>> look like you are the bad guy.
>
>He can do that all by himself. You've been doing a pretty fair job of
>it lately.

Agreed.

Wrong again, kind elderly Sir.. "modern frequency synthesizers" first
appeared in amateur radio equipment in the 80's, a couple of decades
after the imposition of "elaborate U.S. sub-division" in 1968.

Sunuvagun!

There's nothing funny about anything you post, Lennie.

You are mistruthful.

You are deceitful.

You are arrogant.

You are misguided.

It is only your OPINION that the Code test no longer serves any
purpose.

Morse Code continues to be a necessary and viable means of
AMATEUR RADIO communication.

I emphasize AMATEUR RADIO since you seem to continue to think
that we are discussing Military, PLMRS, broadcasting or Public Service
programs.

> > I wish he'd slack off on the Morse code and give us more of the stories
>
> >with the historical aspect.
>
> "You can't handle the truth!" - Col. Jessup (before being arrested)

You're the one with the truth problems, Lennie.

> The U.S. government hasn't "slacked off" on morse code testing since

It's being dealt with.

> My last "operating involvement" with HF radio came earlier this year.
>

Absolutely correct. You were NOT operating in the Amateur Radio
service.

> Radio amateurs whose only exposure to "radio" is in amateurdom
> will want to ridicule and denigrate non-amateur radio operation. That's

A lie. Period.

> >> Like MOST of his stuff, it's tired, dated and for the most part, not
> true.
> >> But it makes him happy to wave it.
>
> Tsk. An illustration of my point by another...

It's dated, Lennie.

Except for some "10-4 Good Buddy" exchanges and using a
ship-to-shore radio which did not require any operator licensure, you
ahve ZERO experience in AMATUER RADIO communications or applications.

> > I wouldn't mind actually hearing more details of that time, without the

> in that part of the radio world and want to shut their eyes and ears to it.

No, Lennie, we don't shut our eyes to it.

Your stories of ADA were interesting the first time around.

It was sometime between the 85th to 90th time we heard them and
why those 1950's era "experiences" somehow qualified you to render
opinions on 21st century AMATEUR RADIO that they became dreary and
laborious.

Also, your lame attempts to glorify YOUR rear area support duties
by association with Soldiers who were KIA three years before you had
even enlisted made the rest of the tale pretty weak.

> > Kinda makes you think that is about all they have to offer.
>
> PCTA extras can only offer braggadoccio about their "operating
> skills" and their disgust at those who don't venerate them.

No one has to "venerate" them, Lennie.

The "disgust" is yuors...for all the 675K+ people in the United
States, children included, who can legally operate a radio station
while you can't.

> > Seriously, has Lenover21 or William ever called anyone in here names,

Leonard, Leonard, Leonard.

Please stop it.

Yours and mine little tit-for-tat only occured after you spent a
great deal of time calling me a Nazi, elitist, jack booted thug, etc.

You only perpetuate your reputation as a pathological liar when
you try to pass this off on others.

> Unfortunately, the PCTA extras in here are so thin-skinned they
> cannot abide opposition of the slightest kind. Their problem.

YOUR problem.

We won't let you liberally lie, deceive and otherwise treat with
disdain something we know better about without retort.

> The question (in my opinion) that should be surfacing is: Why is
> there such a prolonged talk about "how good and noble" are the

> PCTA extras and "how band and wrong" are the NCTA?

That's only "the question" as it pertains to you.

The rest of us have more or less moved on.

You keep trying to make an issue of a NON-issue.

> Time marches on, but few march to the beat of the CQ in morse
> these days. The morse code test has long since outlived its

> You said, ">>OUTSIDE<< the U. S. Amateur Bands"

Yes, I did...

Those bands of radio frequencies as allocated by the United
States Federal Communications Commission.

Not outside the territorial limits of the United States.

> Len gets to decide what other countries. Then >>>you<<< have to
> provide the rules that deny him access.

You're in idiot mode again, Brian.

> > The context of the posts were directly related to your mentor's lack of

> notwithstanding?)

You've not "rubbed my nose" in anything yet, Brian. Lennie's
right to emit 100 unlicensed milliwatts per part 15 or 4 watts per
Part 95 have never been in dispute. As a matter of fact, he's
insinutated that he intends to get on the Amateur Bands courtesy of
Part 15, but he's never done it.

Still waiting on YOU to provide some evidence of the "major roll"
played by those unlicensed devices in emergency comms, however.

Agreed!

The people who disagree are those who say the code test must go to "foster and insure growth", that it is a "barrier", etc.

>
>On a somewhat related matter, I also don't think that we need a code
>test to prove anyone's worthiness to operate on amateur frequencies

I agree partially - if it were up to me, all amateur licenses would require a code test, not just those with privileges below 30 MHz. (But it's not up to me).

Who decides what is "necessary"?

What happens when (not if) that same argument is applied to the written exams?
Most of what is in the written exams is no longer necessary for the legal
operation of an amateur radio station.

>de Hans, K0HB
>

uh-oh, Hans, now you've done it......

You've used historical fact to prove that Lenover21 is mistaken about something.

I'll 'draw fire' with some more historical facts:

- Hams were responsible for and successful at staying inside their allocated bands and subbands (phone-image vs. cw-data) long before 1968 or "modern frequency synthesizers".

- The concept of "subbands by license class" was proposed no later than 1964 and accepted in principle by FCC no later than 1965 - without "modern frequency synthesizers".

- Some HF ham band and subband edges are/were not multiples of 100 kHz (top end of 20 and 15, for example, or the edges of the old 11 meter amateur band). Many have been that way since long before 1968 or "modern frequency synthesizers".

- With the exceptions of beacon and repeater operation, hams are not required by regulation to operate on specific spot frequencies or channels. Nor are they required to know their precise operating frequency other than that it is inside the allocated band or subband. Nor are they required to use "modern frequency synthesizers" or crystal control.

- Inexpensive, stable, precise, accurate self-controlled variable frequency oscillators have been available for hams to build or buy since long before 1968.

- The concept of "subbands by license class" is intended to reward the passing of more-advanced written tests.

"You miss the point, Steve. The purpose of r.r.a.p. is no longer
discussion of policy, or learning something, or study of communications
theory.

The purpose is to FIGHT and to denegrate the dignity of all who do not
agree with you! Any other post is off topic and is not welcome here.

Get with the program. No one is "mistaken" or "partially correct" on
r.r.a.p. They either 100% totally agree with you, or they are "a lying,
scum sucking, bottom feeding no-code beeper." There is no in between,
and there must be at least one of each in every conversation here.
Anything which resembles a rational exchange of ideas and useful
information will either be ignored, or some enterprising induhvidual
will hijack the thread and turn it into an argument about Morse. No
other "Policy" conversation is allowed to survive unmolested.

72, de Hans, K0HB"

In article <Xns956CE3B8F6C57elektrosmdonet@130.133.1.4>, Alun
<elektros@yahoo.com> writes:

>I tend to think that a single class of licence would be a good idea,
>although many people argue that there should also be a beginner's licence,
>and I am not totally opposed to that. I don't see a genuine need for more
>than two licences, though.

Then what you'd want, ideally, is a single class of license whose written test would at least be equivalent to the current written requirements for Extra - all in one go.

>Also, I don't think subband restrictions by
>licence class make any sense whatsoever, as the propagation is the same for
>the whole band.

They are a good idea because they act as an incentive. Of course if there were only one class of license, they would no longer exist.

>Ideally, I would give an entry level licence very restricted power on the
>whole extent of a limited number of bands in different parts of the
>spectrum.

How restricted, and which bands?

I think that an ideal entry level license would include parts or all of *all* HF/MF amateur bands. Here's why:

1) Propagation on the various bands varies widely with time of day, time of year and sunspot cycle. Having the widest possible selection of bands would allow an entry-level amateur to use the best band for a given set of conditions and resources, and also affords an opportunity to learn about the various bands, propagation, etc.

2) One of the biggest problems facing many amateurs is antenna restrictions. Another is equipment cost. Often an amateur has to make do with compromise antennas and equipment which limit the choice of bands. Having the widest possible selection of bands would allow an entry-level amateur to use the best band for a given antenna/rig combination, and also affords an incentive to upgrade so more space on most bands could be earned.

>Needless to say, I wouldn't have a code test for any licence. The
>problem would be the transition from the present situation to such a
>scheme. The vested interests of those currently licenced probably make this
>idea impracticable.

Not at all!

All that would be required would be:

1) Existing license classes other than Extra closed off to new licenses after a certain date. They keep their existing privileges and can renew/modify indefinitely.

2) Existing license holders could upgrade to Extra by passing the required written tests.

3) The new entry-level license class has its own privilege set.

4) Existing license holders other than Extra get the combined privileges of their existing license and the new entry level license.

Eventually everyone in the closed-off license classes will either upgrade or leave by attrition, and the rules governing them can be removed without an NPRM. For example, we're down to about 30,000 Novices now, and dropping every month. When the last Novice is gone from the database, the rules about that license class can be removed from Part 97.

Mike this is gonna come off a bit weird coming from a hardcore PCTA
but I learned that the Carl is basically an OK kinda guy. I met him
eyeball-to-eyball in the Emmaus PA area when Hare, W3HJ, Carl and I
were chasing BPL signals around that area together. I had dinner with
him and at one point threatened him with a code test which he took in
good humor etc. Today he and I continue to keep in touch on a number
of topics well beyond the code test thing. Gets down to firmly
establishing the fact that, with a few obvious exceptions, perceptions
of the overall characters of RRAPers based only on what they post here
can't be taken seriously.

> And I respond to who I like in the group. occasionally even Lenover21,

CSCE's are only good for 365 days not one year. This is significant if
there is a leap year February between the date of issue and the potential
expiration date.

> the whole band.
>

It's not a matter of propagation. It's simply that band restrictions are
far easier to enforce. With a quick lookup of the call sign, you can tell
if the operator is staying within his privileges.

> Ideally, I would give an entry level licence very restricted power on the
> whole extent of a limited number of bands in different parts of the
> spectrum. Needless to say, I wouldn't have a code test for any licence.
The
> problem would be the transition from the present situation to such a
> scheme. The vested interests of those currently licenced probably make
this
> idea impracticable.

Enforcement issues make this idea impractical not the "vested interests" of
those already licensed. It is impossible to determine if a person is
staying within his/her power restrictions unless you are right next to the
transmitter to make measurements. I've worked QRP stations that nearly
pegged my meter and other times could not pull a kilowatt station out of the
mud.

Power limits would rely solely on the honor system. This has worked
reasonably well so far for two reasons: 1) the majority of hams are decent
people and 2) the basic radio comes out of the box with 100 watts, which
works reasonably well so there is not a lot of temptation to hook up an
amplifier and work illegally.

However you say "very restricted power". I'm assuming that you mean
something substantially less than today. So then you would have a situation
where the beginner has purchased a radio that significantly exceeds his
power privileges with no one being able to detect that he/she is exceeding
those privileges if they choose to operate it at full power.

Or are you going to propose that they cannot purchase or own a radio that
exceeds their power privileges?? This would be a very bad proposal. That

would require mandating that hams show their licenses to purchase equipment. It would have to also be illegal for a non-ham to purchase such equipment even for a gift. It would be illegal for a beginner to purchase almost all used equipment on the market. He'd, by law, have to take the expensive, new equipment route. Or the manufacturers might respond with cheap, low quality equipment that would be unsuitable to connect to an amplifier (once the beginner upgraded) as it would have the same problems as amplified CBs do now.

There may even be other ramifications of "very limited power" privileges.

It is far better to select easily enforced requirements (i.e. band limits) than items that are not easily enforced or items that require creating an entire hierarchy of new regulations to support it.

Most of the rewards and privileges we get in life often have little relationship to what we did to get them. Just look at our jobs.

It would also need to include those elements from the Tech and General tests
that are not repeated in the Extra class test.

Was that one of the MFJ units? Did it work well? I've looked at them,
and thought they might be nice for traveling with. Small, and
inexpensive enough that I wouldn't have to worry about damage to it, as
I might my main transceiver.

> Radio amateurs whose only exposure to "radio" is in amateurdom

Not really. I am an insatiable collector of such stories. And most
people are happy to share. some seem surprised because many new Hams
don't care about hearing about past exploits of others.

> There is a considerable body of knowledge and history compiled about
> all of radio. Very little of it concerns amateur radio, which makes some

I enjoy "non ARS" stories too. We have an Old timer in the local club
that had a career as an Engineer at a television station. Lots of good
stories about the stuff that went on there. He was happy to talk, and I
was happy to listen.

>> Kinda makes you think that is about all they have to offer.

When I came here there was name calling. There still is name calling.
Maybe its a chicken and egg sort of thing. I don't know when it started,
or who started it. I'm not all that concerned about who started it
either. There's always time to start over.

If the participants want to.

> Unfortunately, the PCTA extras in here are so thin-skinned they
> cannot abide opposition of the slightest kind. Their problem.

It is a broad brush you paint with.

He badmouths the league constantly, yet plays the ARRL bulletins. This is the serious side right? This tells me it's all a joke, snubbing his nose at the FCC and fellow hams.

He is universally hated by all that come in contact with him. Or maybe your right...that is the serious side.

> including competent Amateur Radio response to all real and genuine
> communications emergencies,

How? By sitting on 14.275, which he voluntarily vacated a couple years back, 24/7 claiming to be a emergency activation. All he is doing is constantly replaying the same ole garbage. The ONLY thing resembling a Hurricane emergency net is his reference to Hurricane FRANCIS. Out of date to say the least.

the promotion of international good will,

Oh you mean like how he jumps on top of the Bermuda net on Sunday mornings?
Or the complaints he gets world wide to the FCC?
Good job Glenn.

> and education with particular focus on young people with a view toward
> assisting them with making better career and life choices.

Yeah he had that wb2jkj (??) school in NYC all snowed and suckered in. That lasted about a month.

Everyone he associates with he runs off. Fact.

Dan/W4NTI

No Hans, she is correct. Doug (N8WWM) spends a lot of time in the CB
newsgroups. Learning about tweaking his amps, and antenna design. He
even had a CB'er design a 6 meter antenna that he now markets on Ebay.

"Mr Ham Radio" in reference to K1MAN's broadcasting:
> ... the promotion of international good will,
. . .

Dan/W4NTI:
> Oh you mean like how he jumps on top of the Bermuda net on Sunday mornings?
> Or the complaints he gets world wide to the FCC?
> Good job Glenn.

Here is a perfect example of the kind of "international good will" (and "ugly American") actions of Baxter's broadcasting:

Hamilton, HM EX
Bermuda.

Mr. Ralph Haller,
Chief, Private Radio Bureau,
Federal Communications Commission,
Gettysburg,
PA 17326,
USA

Dear Mr. Haller,

It was a pleasure to meet with you at the IARU Region II Conference, in Orlando, Florida, last week. I appreciate the time you took to listen to the problem, which we in Bermuda have been living with for the past few years, and also agreeing to reviewing the enclosed documentation.

Further to the letter from the FCC, from Mr. Robert H. McNamera, to Mr. Robert S. Ross under reference 7240-F, I feel that the transcript of the tape I have done which is enclosed under reference DOC K14/89, is proof enough that third party traffic was indulged in where he states "Covered by FCC rule 97.113C Associated Press questions were answered in detail by VP9--over the net." At no time did he ask my permission to relay any of this information and I was unaware that I was on a 'phone patch. Some Bermudians who were in the Boston area stated that they heard my report over the radio, with my voice being broadcast as a result of my operation on the Bermuda Emergency Net. I do have tapes which we can arrange for copies to be made, but I do not wish to bore you with four hours of tapes, but if it is necessary, so be it.

As you may know, whilst at the Conference, the Honorable Patricia Dennis wished to meet with me because of her impending holiday in Bermuda. I have met with her and her family and we have discussed the above matter. I will be copying this correspondence to her so that she will be as fully informed as your good self.

We have attempted to get this matter resolved with K1MAN, ARRL, IARU etc but without any success. As you will see from DOC K3/88 he quotes the FCC ruling on frequency co-ordination as per the second paragraph. He broadcasts one hundred and thirteen times per week and his main reason for doing so is to keep the frequencies clear for when he wants to get on the air. I have a tape where he admits to doing this and agrees that he upsets various nets.

In DOC K7/88 he asks 19 questions about how we operate and this is the reason that I did not reply to his letter, not because of the correspondence I have had with ARRL. As amateur radio operators, we In Bermuda have a very friendly net which is not "hereby co-ordinated" by some rule or other. You will note from DOC K8/88 that the ARRL do not agree with his concepts.

I sent a report to "QST" on Hurricane Dean, (DOC K12/89) which I can assure you is factual. More people need to know what went on because if they listened to the broadcast (DOC K14/89) they would be totally mislead. I did a response on the Bermuda Net (DOC K15/89) and also read it out to other parties who were interested. K1MAN has agreed to broadcast a tape if I sent him one but he is then going to do a rebuttal, and this will not get anyone anywhere!!! I have taken the matter up with the Department of Telecommunications (DOC K16/89) and will be pursuing this also through the American Consulate General.

DOC K13/89 was sent to me by Mr. R. Ross the day after Hurricane Dean and as he says "I was totally incensed by the actions. ....."

DOC K19/89 shows that the IARU Region 2 Executive Committee have considered this as a result of the letters DOC K9/89, DOC K10/89 4 DOC K11/89 but basically are loath to interfere in another countries activities, if it can be settled otherwise. Resolve 2 in DOC K20/89 was passed and therefore each country will be responsible for its own emergency nets unless a request is made to the contrary.

I regret that this letter is rather long and that there is so much additional information. However, the Bermuda Amateur Radio Operators would be most grateful if this problem could be resolved.

In a recent conversation we had with KAMAN he stated that any Novice could broadcast 24 hours per day on 28MHz if they so wished. As I stated in DOC K11/85, page 2 paragraph 3, that if a small minority decided to broadcast from every country, the bands would be full and QSO's as we know them would not exist.

Many thanks for listening at Orlando and for reading this. I look forward to your reply,

Yours sincerely,
[A- S-, VP9--]

c.c. Hon. Patricia Dennis, FCC Commissioner

> nothing against their egregious conduct?

That is simply incorrect. I have and still do disagree with what Steve sometimes posts, and I have noted it to him. Jim has also, on more occasions than me. We do not support or condone their actions.

What the issue is is that I (and presumably Jim) do not go after people in the manner that you want us to. It isn't my style, and I won't change it to suit you.

>>> Since the PCTA first had their hobby-orgasm over a code key.

No, i can't. Unless you are saying you want no testing at all for HF
access, your argument is only half formed. If you ARE saying you want no
testing for the Amateur Radio service, Well, I *most* respectfully disagree!

>
>> I guess history must be bad, huh?

That letter was proven to be a forgery, despite its official looking
appearance. The FCC denied any such letter ever existed.
Perhaps Dan Rather and CBS might be interested in it?

Need? I doubt that the one classer's want the test level at the Extra
level to begin with, and might go apoplectic if the Tech and General
tests were included!

My proposal to FCC asks for a one-term, privilege-rich beginners permit,
and a "full-privilege" standard license with an exam including the
material currently covered on the Tech/General/Extra written
examinations. Current licensees could continue to renew in their
existing class, or upgrade to the new "standard" license class.

Cries? Heheheh...looks like you are the keyclown whining in your frustration. How does it feel to know that you are powerless to stop AKC dissent. There is nothing you can do, sidewalk sissy...nada...and we just keep proving it. Happy Thursday, maybe we SHOULD put you and sidewalk sissy Chukkee on pay per view....putya in a ring and have the judges decide the most limpwristed of the 2 of ya. HARDEEHARRHARRHARR. Man, the AKC could clean up by selling feminine hygene and baby toy ads on the show, not to mention auctioning off the winner's pink tights on ebay...woo hoo...I KNOW keyclowns would bid that sucker up!

I know what it's intended to do, but that doesn't mean it makes any sense. Consider our neighbours to the North who have to get an Advanced to access 40 and the WARC bands. That makes more sense than subbands. (That's only an example - I'm not suggesting adopting the Canadian system wholesale).

Hey Doug, just a question...how long you figure until you do a complete meltdown again and start posting porn related garbage? I know in the past, you don't have much tolerance for being made a fool of, but I was just wondering if the COURT ORDERED helped you any.

Take care guy, and I'm glad you can't afford a trip to Texas, otherwise I'd have to watch my back.

BWHAAAAAAAAAAHAAAAAAAAHAAAAAAAAA!!!!!!!!!!!!!!!!!!!!!!!!!!

Not really, although the element 4 questions should be included in the pool
for it.

>>Also, I don't think subband restrictions by
>>licence class make any sense whatsoever, as the propagation is the same
>>for the whole band.

>

Incentive subbands run counter to the core purpose of testing - to ensure
competency. The appropriate level of competency for access to a different
part of the same band at the same power level is, um, let me see - the
same. Big surprise, huh?

>>Ideally, I would give an entry level licence very restricted power on
>>the whole extent of a limited number of bands in different parts of the
>>spectrum.
>
> How restricted, and which bands?

I'm not sure how much, maybe QRP, maybe a bit more. It doesn't really
matter exactly which bands, harmonically related combinations such as 40
and 15 would be good.

>
> I think that an ideal entry level license would include parts or all of

Bands spread throughout the spectrum would acheive that without giving them
every band.

> 2) One of the biggest problems facing many amateurs is antenna

Or gaining those bands that their random wire works best on might be an
incentive to upgrade, if you look at it from another angle.

Your transition plan is messy, and unlikely to appeal to the FCC as it leaves many loose ends.

The one-term idea was tried before and dropped, so I doubt very much if we will see it again. I agree that a standard licence test ought to include all of the element 2/3/4 questions, though.

I agree that is why the FCC like it. It would work just as well with whole
bands, though, and actually offer a better incentive, e.g. there would be a
real incentive to get the bands inbetween the entry level ones to fill in
when propagation doesn't work on those ones for where you want to talk to.

>> Ideally, I would give an entry level licence very restricted power on

You are sure right about jobs, Dee! And I admit power limits have their difficulties, although I still think they are appropriate for less qualified hams, whether they can really be enforced or not. I still think that a real incentive is to get more bands, not just more bits of the same ones.

Right you are, Dee.

That would mean an exam of at least 100 questions, allowing for
overlap and the simplification of some rules. And the prospective ham
would have to pass it all in one shot.

Would that *really* be optimum for the ARS?

A fine point that has burned a few hams!

However, the calendar is structured so that in most cases it's really
not an issue *if* the exams are taken on weekends, which is often the
case. This is because the calendar advances one day on regular years
and two days on leap years.

Example: September 26 is a Sunday in 2004 but a Monday in 2005. So if
a current Tech passes, say, Element 3 at the Podunk Hamfest this
coming Sunday, their CSCE will still be good on September 25 of 2005,
which is the last Sunday in September 2005 and probably the next
Podunk Hamfest.

However history has demonstrated that the biggest growth in amateur radio
came when licensing was broken down into levels so that the prospective ham
didn't have to swallow the whole thing in one big chunk (the five step
incentive licensing program).

When the UK had a single theory test it had 95 questions of all levels of
difficulty. I thought that was optimum, so, of course, they did away with
it!

Perhaps optimum for demonstrating the competency of the prospective ham but
probably not optimum in encouraging people to get into the hobby. People
would be put off by the amount of material that they would be required to
study and simply quit after a few days.

Although those who lost privileges with the introduction of the 5 step licensing system were rightfully upset by this, still the data shows that amateur radio had its largest and longest lasting sustained growth after this was implemented. People want to take it in "bite size" chunks rather that swallowing the whole ham (pun intended) at once.

Not quite correct, Alun - under the current license structure, access
to the Amateur bands in Canada is as follows:

Basic license - access to all Amateur bands over 30 MHz.
Advanced license only - same band access as Basic license only.
Basic license plus Morse Code - full access to all Amateur bands.
Advanced plus Morse Code - same band access as Basic plus Morse Code.

The Advanced allows more privileges - high power operation, ability to
sponsor a Club station, act as control operator for a repeater, become
a designated Examiner, build and / or repair your own transmitting
equipment, and a few others.

A Basic ticket (which uses a 100 question exam, and covers the same
material as the US Tech and General exams combined, more or less) plus
Morse is all you currently need for an "all access" Amateur Radio pass
up here!

No, it doesn't. What that does is to crowd certain bands and empty others.

>(That's only >an

A system in which nobody loses and nobody gets a free upgrade, either.

When are you going to formally propose it to FCC, Hans? I'd love to see it get an RM number.

And the vagaries of antenna installation make it even less clear. I'd rather
have QRP and an excellent antenna than high power and a mediocre one.

>Power limits would rely solely on the honor system. This has worked
>reasonably well so far for two reasons: 1) the majority of hams are decent
>people and 2) the basic radio comes out of the box with 100 watts, which
>works reasonably well so there is not a lot of temptation to hook up an
>amplifier and work illegally.

Also, amplifiers are fairly expensive, and the dBs per dollar can be steep.

>However you say "very restricted power". I'm assuming that you mean
>something substantially less than today. So then you would have a situation
>where the beginner has purchased a radio that significantly exceeds his
>power privileges with no one being able to detect that he/she is exceeding
>those privileges if they choose to operate it at full power.

That's exactly the situation in Japan.

>Or are you going to propose that they cannot purchase or own a radio that
>exceeds their power privileges?? This would be a very bad proposal. That
>would require mandating that hams show their licenses to purchase equipment.
>It would have to also be illegal for a non-ham to purchase such equipment
>even for a gift. It would be illegal for a beginner to purchase almost all
>used equipment on the market. He'd, by law, have to take the expensive, new
>equipment route.

Unless he/she bought used QRP stuff.

On top of that is the fact that a newcomer couldn't buy a transceiver until the license was earned. So how is a newbie supposed to get a hands-on feel for the ham bands?

In the bad old days of separate rx/tx, it was common for a would be ham to buy or build a receiver and become familiar with ham radio before getting a license. That's how many of us learned the code, too. Still a good idea, only now the new ham now gets a transceiver in most cases. "No gear without a license" would end that.

>Or the manufacturers might respond with cheap, low quality
>equipment that would be unsuitable to connect to an amplifier (once the
>beginner upgraded) as it would have the same problems as amplified CBs do
>now.

>There may even be other ramifications of "very limited power" privileges.

New operator + compromise antenna + very low power = frustration.

>It is far better to select easily enforced requirements (i.e. band limits)
>than items that are not easily enforced or items that require creating an
>entire hierarchy of new regulations to support it.

Yep.

>Most of the rewards and privileges we get in life often have little
>relationship to what we did to get them. Just look at our jobs.

In the case of subbands-by-license-class, there's another angle. The restricted parts of the bands are usually less crowded. And they're where the DX often hangs out, and where the contest overflow goes first. So they're "prime real estate".

That question has already been answered. The answer: no one can reliably
predict when or even if it will happen.

Of course the letter is true, Lloyd. Glad to see it bothers you. Would you like to see copies of the documents referenced in the letter? Would be glad to scan and show them. Or, pick one or two of the referenced DOC's you think would be of interesting and I will be glad to post it.

Yes, it does.

> It's Hans' opinion, and nothing more.

And the more folks that have this opinion the greater the validation.

See how it works?

> > > More than one person (meaning: other than me) has called Hans "Len with a

>
> I've never done it either, Brian. So what's your point.

You create little twisted scenarios where you imagine that other
people will do these evil things that you wish will happen to Len and
his loved ones. You don't know these other people with evil intent,
but you know that they are thinking evil thoughts about Len. Strange
how you can know that. Very, very strange.

Whatta work of art you are.

> > Or threaten to "Dial" a person into custody.
>
> You'd deserve it, Brian.

You said that you were "dialing," and you say that I deserve it.

Why didn't anyone show up at my door?

I think you lied when you said that you were "dialing."

Did you call the authorities or did you lie about it?

> You certainly need the help and
> observation.

I'm good. You're not. Start "dialing." We'll see who they pick up.

> > Or accuse or insinuate that another was a pedophile.
>
> Is it true? Are you? Can you prove you're not?

And you claim to have never made such an insinuation.

Liar.

> > > Peas in the pod.

I don't doubt that he is a decent sort. I suspect that most everyone
here would be enjoyable to be around. I would enjoy meeting Lenover21, I
would bet Steve would be a great guy to have a brew with, and I can't
condemn Brian, seein' as how he is a homebrewer!(of beer that is) ;^)
And I'm sure Hans is a hoot. And those are the people I have had some
real disagreements with.

But in the context of in here, it did frost me a bit when he decided to
support the NCVEC petition. Simply no need for that.

Two classes there. I do like your full privelige license, but we've had
the discussions about the learners permit that I'm uncomfortable with.
It beats the bejabbers out of the NCVEC proposal tho'!

Hehe, not to worry, Joe. This is a permanent war zone, and all new questions are potential battlefields.

> Still looking for the basic question of WHEN will licensing restructuring
> happen?

I don't know if you saw the poll results posted by Jim N2EY? THe best we can do is make predictions. I had predicted 2007, or at least 4 years from the change in the treaty. I might extend that if the republicans are in power at that time. It isn't a diss, it is just that republican administrations are *much* less likely to participate in international treaties.

In fact, I would bet a six pack that as long as we have republicans in the White House, there is little chance of Element 1 being dropped. Not because they like Morse code, but because they hate treaties.

Some good advice: Get the license now, regardless of the Morse code test. the ARS is simply too much FUN to miss time on.

>after the imposition of "elaborate U.S. sub-division" in 1968.

Tsk, tsk, crusty old sea salt.

Frequency synthesizers began appearing in many radio services in
the early 1960s. In amateur radio they began with homebuilts since
the offshore manufacturers hadn't gotten around to putting those into
amateur transceivers until the late 70s. :-)

Now if you are going to make a great big federal case out of this
little thing, then feel free. :-) You seem to need an argument
subject and want to go many rounds on this? Not for me. Waste
of time for me. I was in the lab and in the field regarding frequency
synthesizers long ago, know their theory and know both their good
things and bad things of their internals.

Tsk. But, you DO have to be "judgemental," don't you? :-)

[by the way, the Review Committee rules against the Armenians
so don't pull that old saw through the wood again...]

> No, i can't. Unless you are saying you want no testing at all for HF
>access, your argument is only half formed.

Tsk, tsk, tsk. Not good manners to carry that to extremes. :-)

What I am saying is that the morse code test should be eliminated.

That's all.

Trying to reduce the argument to extremes ("reducto ad absurdum")
of the absurd is NOT a reply.

> State of radio art would not pe permitted in the ARS.

?

>> Poor PCTA...they think the slightest negativism on their mythical
>> championship of morsemanhood is a "personal insult."
>
> hmmm, then why do you think that I should condemn Steve so badly? He
>is doing nothing that you do not do.

Tsk, tsk, tsk.

Why do you keep inserting mentions of that person?

>> PCTA simply refuses to acknowledge that the world has advanced
>> and that amateur radio can no longer by "qualified" by radiotelegraphy
>> skill demonstrations. PCTA wound far too easily.
>
> Respectfully disagree. You make the statement, please provide the
proof.

The evidence is all archived in Google. :-)

>Proven wrong every time you post. I find it hard to understand why you
>keep saying that sort of thing, when it obviously isn't the case.

Tsk, tsk, tsk. Nose got tweaked THAT hard, did it?

> Not been my experience as a Ham. You see bad, and declare that all is
>bad. I see bad, and continue looking until I find the good. It is there.

You are NOT acting like a Pollyanna. :-)

If you were "looking for the good," your tone would have been different.

As it is, you put all the PCTA extras in the "right" and all the others
in the "wrong." Tsk, tsk, tsk.

> You *can* turn it around. You probably think I'm being condescending
>again, huh?

What am I "supposed" to "turn around?"

What is IS. Try to live with that...it is all around you.

You are not entirely condescending in that reply. In parts you showed
arrogance in the "we PCTA are right and all you others are wrong"
attitude. Tsk.

No one is required to captitulate to some nebulous myth/ideals that are all artificial. Try not to enforce such attitudes on others.

This isn't "playing." Considering change to government regulations
is really serious business.

The mighty macho morsemen have NOT earned as much "respect"
as they claim they are owed.

> And it is a very good thing that the NCTA's and interested others are
>not that way, eh?

Actually, we NCTAs were NOT that way.

Eventually, when enough shit is thrown at you for no good reason,
one is going to throw it right back.

PCTAs have been tossing shit about mighty morse for decades,
rationalizing its test existance by very old myths. Some of them
have convinced themselves that they are just so wonderful that
their word is that of radio gods.

After a while that gets very tiring. Try about four decades of it
and you will get a mental picture for yourself.

It gets worse when someone, anyone, tries to argue rationally
with those PCTA gods of radio. They are above argument but they
are not beneath tossing more and more shit on the persons who
are trying to argue rationally.

>> If you feel so outraged, then, by all means, petition the FCC to change
>> the name of the ARS to the Archaic Radiotelegraphy Society.
>
> Very little outrages me. I think that may be your game, not mine.

I sense you have some rage there someplace. You've been slightly
brainwashed by league propaganda and want to follow the party line.
Then you discover that there's lots of folks who aren't so brainwashed
and you don't like it (for whatever reason).

Don't go into too much rationalized denial there. It's a common thing
among relatively new hams.

>I might my main transceiver.

NOT an "MFJ unit." I was designed and is made by SGC (Stoner
Goral Company) in Belleview, WA. Model number is 2020.

Search for "SGC" and you will get their website. You can also see a
nice review of it on Antennex (www.antennex.com) by Richard Morrow,
one of the regular contributers there. More pictures, too.

The 2020 is sold to anyone who cares to buy it. [not cheap] SGC's
market is probably divided between boat owners and hams plus
some non-hams for land use.

SGC also has some nice automatic antenna tuners. (4 models?)

>> Radio amateurs whose only exposure to "radio" is in amateurdom

That's a good trait and you get a high-five for that. Pity that some
other folks' kids weren't taught better.

>> In this environment such is wasted effort.
>
> Not really. I am an insatiable collector of such stories. And most
>people are happy to share. some seem surprised because many new Hams
>don't care about hearing about past exploits of others.

The "happiness" in sharing goes away after a number of those
"untrained" others want to pee in the puddle...because they LIKE
to do that sort of thing. [not unlike hecklers in cabaret stage shows]

> I enjoy "non ARS" stories too. We have an Old timer in the local club
>that had a career as an Engineer at a television station. Lots of good
>stories about the stuff that went on there. He was happy to talk, and I
>was happy to listen.

According to a strident minority in here, non-ham experiences are
verboten, forbidden, shouted down, etc., etc. Take it up with them.

> When I came here there was name calling. There still is name calling.
>Maybe its a chicken and egg sort of thing. I don't know when it started,
>or who started it. I'm not all that concerned about who started it
>either. There's always time to start over.

It started when the newsgroup was first formed...to take on the "code
test" issue that was getting out of hand in rec.radio.amateur.miscellaneous.

The Archaic Radiotelegraphy Society would have NO talk against
removing any morse code test, anywhere, anytime. They let all the
heretics (the ones wanting freedom of entry) KNOW it in no uncertain
words.

> It is a broad brush you paint with.

Broad brushes are necessary when the graffitti is spread so far
and wide.

>> The question (in my opinion) that should be surfacing is: Why is

Did that. Denial on their part.

>> The morse code test has long since outlived its
>> usefulness. There is NO validity in keeping it around just because
>> some middle-aged wannabes had to do it over 30 years ago. None
>> at all.
>
> If it goes away, I won't lose a moments sleep over it.

The morse code test is an excellent reference point for braggadoccio
by those who passed it. They can then rightfully claim they did
"more" than newcomers did...and by extension the newcomers are
"dumbed down" by demonstration because they didn't have to take
a test. There's really no end of rationalizing the olde-tymers' self-
proclaimed superiority.

>>
>> Carl only got to reap what he sowed.

Carl *used to* be one of the top name-callers, insulters, shouters, and all-around behave-like-a-two-year-old posters here. Almost but not quite down to Len Anderson's level of behavior.

Then Carl mellowed out and his online behavior improved dramatically. He also became a lot easier to agree with! Perhaps it was the influence of assertive-but-not-aggressive folks like W1RFI or K2UNK, perhaps it was seeing FCC up close, perhaps it was the 2000 restructuring or maybe it was something else like the fact that some of us simply refused to reply in kind. Or a combination of factors, I don't know.

It should be remembered that Carl did, and is doing, a very significant job in the anti-BPL efforts, including actual observations and measurements, with detailed commentary to FCC based on first-hand experience.

>> He also altered his opinion to
>> something he said that he would never do. Nothing wrong with changing
>> one's mind - I do it at least three times before breakfast. (someone's
>> quote) But a large part of my earlier respect was based on that "never
>> reducing test requirements" statement. So he did a lot of credibility
>> erosion there.

I was really surprised at that too - at first. What it comes down to is a political move. I think Carl so wants Element 1 to be removed, and the rules to be simplified, that he supported the ARRL proposal even though it effectively reduces written requirements. All about compromising to get what he thought was most important. Faulty as it is, the ARRL proposal is much much better than the NCVEC "Communicator" one.

Side note: If you read the commentaries on the 18 or so restructuring petitions so far, there's no clear consensus *for* any of them. In fact, the majority opinion seems to be to leave things as they are (including the code test), or

make minor adjustments around the edges. What's missing in that pile of commentary is broad-based support for a workable proposal.

Now if some proposal did get a lot of support, (say 70-80% or more favorable) there's a good chance FCC would take that as consensus and run with it. No restructuring proposal thus far has gotten near that much acceptance. So Carl supported the ARRL petition, warts and all, in the hope it would carry the day. (Just IMHO)

Which is why I'd like to see the K0HB proposal get an RM number. WHo knows what the reaction might be?

(end side note).

A part of that support is based on the anti-BPL fight, too. The argument goes like this: There are well over 320,000 Tech and Tech-Plus hams out there who have either no HF/MF (those who haven't passed Element 1) or who have minimal HF (those who have passed Element 1). Free upgrade to General would endow all of them with a lot more HF/MF privileges, and hopefully a significant percentage would set up HF/MF stations and use them - and protest BPL too.

In any event, he simply changed his mind in certain specific instances. Here are some more:

For years Carl harangued us about "electronic paintball wars" and such, referring to contests and DX-chasing. Also about "better modes and modulations" including spread spectrum, appliance operators who have no idea what's behind the panel, etc., etc.. Another pet peeve was vanity calls - he held on to his old 2x3 6-land call even though he lives here in EPA.

Then, after the restructuring of 2000, he got his Extra. And a 2x1 vanity call. And he racked up over 70 countries on HF SSB using a manufactured transceiver.....

Not that there's anything wrong with any of it. But it sure was surreal to read about! As you say, Mike - "it's all good".

>Mike this is gonna come off a bit weird coming from a hardcore PCTA
>but I learned that the Carl is basically an OK kinda guy. I met him
>eyeball-to-eyball in the Emmaus PA area when Hare, W3HJ, Carl and I

And the real truth may be even simpler. FCC enacted medical waivers back in 1990 at the request of a now-dead King via Papa Bush.

Those waivers effectively meant that nobody really had to go beyond the 5 wpm test to get a US ham license. All it took was a doctor's note from *any* MD or DO, and you could write the letter and get the doc to sign it. You didn't need a diagnosis of any particular problem, nor any sort of permanent condition, just a rather vague certification that for medical reasons it would be harder for you to pass the test than the average bloke.

Do you know of *anyone* who tried and couldn't get a waiver? Or *any* doc who was even questioned by FCC? I don't. But there was a lot of complaining in some quarters about waivers, so FCC made 'em go away.

>So I expect the

Good point! Plus I'm pretty sure both the test format wasn't an open-pool of multiple-choice questions, and the technical level of the questions was somewhat higher than in the US exams.

How does the number of hams-per-capita in the UK compare to the USA? How is the growth?

Could it be that the *written* test is/was a "barrier" there?

>Although those who lost privileges with the introduction of the 5 step

Exactly. With the elimination of the waiting period for Extra more than a quarter century ago, anyone who wants to do the whole thing in one go can do so.

> Not been my experience as a Ham. You see bad, and declare that all is
>bad. I see bad, and continue looking until I find the good. It is there.

I have to look REEEEEEEAL hard to see ANY "bad" in Amateur Radio.

Most of it, unfortunately, seems to be on the Left Coast. The 147.435MHz
repeater comes to mind. Richard Burton is another.

But then California seems to lend itself to that sort of childish
behaviour.

> You *can* turn it around. You probably think I'm being condescending
>again, huh?

Nope. Just polite clarity of thought and expression.

>
>My positions WRT amateur radio policy are crystal clear.
>
>That is why you attack me.

I am not "attacking" you, Brian.

I challenge your assertions. You continue to make assertions of fact
about your experience and skills in Amateur Radio, yet never pony up any
validation of them.

>> > He
>> > > said he was an antenna guru and "CW expert" (yes, he said he was a "CW

>
>I will not play your games.

It's not my "games", Brian...They are yours.

You are the one making assertions of skill, knowledge and experience.

However there is NOTHING to validate any of it.

What "rationale"...?!?!

"I refuse to answer"...?!?!?

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
AHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! ! ! ! !

And "strong will"...?!?!

You conduct yourself politely and reasonably when Len's out-of-pocket, and
then when you "team up" with him, you parrot him down to the diminutives and
insults.

You have no will but to get Lennie's nod-of-approval.

You don't have enough say-so in your own behaviour as to decide which hand
you'll wipe with.

>> > > Stand-up guy.

The difference, Brian, is that I ACKNOWLEDGE what I collect as opposed to
what I earned.

I have a "box full of real medals that were really awarded to me"
too...And I am NOT speaking of my CAP awards, all of which were also earned
too.

> Kinda like Lennie's efforts to embellish his Army

See how WHAT works?

That Hans doesn't like me? Ooooooh.....I am soooooo hurt.

Hans has proven himself to chastise and demean others about one form of
conduct and then steps right on out and does it himself.

You think the opinion of someone who can't march to his own tune is
problematic to me?

I don't.

>> > > More than one person (meaning: other than me) has called Hans "Len

>how you can know that. Very, very strange.

Sorry, Brian...It happens all the time. Pehaps if you actually did have some training, education or other experience in evaluating human nature and conduct, it wouldn't come as such a surprise to you.

Or if you read the news once in a while...

One of the events that inspired that actually occured only a few miles
from where Lennie lives. A few years ago a man spent a lot of time trying to
demand changes to local zoning laws for his own benefit. He spent a great deal
of his own time and money to "prove" why he was right and everyone else was
wrong. Finally someone got tired of his outrageous allegations and demands and
took it upon themselves to induce him to stop.

>Whatta work of art you are.

Coming from you, I take that as a compliment.

>> > Or threaten to "Dial" a person into custody.
>>
>> You'd deserve it, Brian.
>
>You said that you were "dialing," and you say that I deserve it.
>
>Why didn't anyone show up at my door?
>
>I think you lied when you said that you were "dialing."
>
>Did you call the authorities or did you lie about it?

Not every contact with Human Services generates an investigative contact,
Brian.

Ask them.

Sometimes it's just a note in a file. Then eventually enough notes wind
up in that file that when some other intervention becomes necessary, there is
"background" from which to proceed.

Why are you worried about it..?!?! If your conduct is as you claim it is,
then it's just a piece of paper in a dusty file.

If it's NOT as you claim...well...then...

>> You certainly need the help and
>> observation.
>
>I'm good.

No. You're not. You're overtly evasive and mistruthful on a wide range
of topics. If you did the things you claim then why are you not willing to
prove them?

>You're not.

Still waiting on your presentation of credentials upon which you base that
assessment, Brian.

>Start "dialing." We'll see who they pick up.

Uh huh.

>> > Or accuse or insinuate that another was a pedophile.
>>
>> Is it true? Are you? Can you prove you're not?
>
>And you claim to have never made such an insinuation.
>
>Liar.

Hardly.

You said I insinuated that you were a pedophile.

I asked you if you were or if it was true.

Is it?

You seem to be awfully preoccupied with it, even defensive.

Are you hiding something? You seem very anxious about it.

>> > > Peas in the pod.
>> >
>> > Green Giant
>>

Completely out of context as usual. Any port in a storm eh? Like I
said you can wriggle and you can squirm but in the end yer BS simply
doesn't flush Burke. As usual. Cecil, the two Jims, Hans, etc. "took
me seriously"back in 2001 and, well, you know the rest dontcha Burke?
Just can't hack it can ya Burke?

We'll just add your tall tales about your end-fed wire to the tall
tales about your T5 operation to your list of "accomplishements" and
and move along here.

And thier licensing system was not a "once size fits all", which is what
you suggested and what socialism bascially professes.

Try again, Hans. Ya came up short...Again.

The 30 Steps below will help all New Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano

Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice

"James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater, or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

courtesy of WA8ULX.

73's & 88's, de Roger Wilkoe.

Amateur Radio Newsline™ Report 1415 September 24, 2004

Amateur Radio Newsline report number 1415 with a release date of Friday, September 24th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. Shortwave broadcasters say no to B-P-L, big money awarded to put a pair of truly rare D-X locations on the air and a satellite broadcaster joins the rescue radio cause. Find out the details on Amateur Radio Newsline report number 1415 coming your way right now.

THE BPL FIGHT: SHORTWAVE VS. DIGITAL SHORTWAVE

Amateur Radio has another friend in its fight to stop the world-wide rollout of Broadband over Powerline technology. This, as a European short-wave broadcaster say that B-P-L and digital radio will have a lot of trouble co-existing. Fred Vobbe, W8HDU, is here with an update on digital radio and an explanation of why the two do not mix.

--

Jacob Freedman, N2MPN, found an interesting story on BBC News Online and thought he would share this news with A.R. Newsline listeners. In the link to the story, titled "Fears for new digital radio system" written by By Chris McWhinnie of BBC Monitoring in Amsterdam, the warning came from Peter Senger, the chair of the Digital Radio Mondiale (DRM) at the International Broadcasting Convention in Amsterdam.

DRM is a standard agreed by world broadcasters for a completely new short wave radio system. The new internet power line distribution system has been evaluated by engineers, including the BBC, and has been found to affect short wave in particular.

Short wave is mainly used to broadcast internationally and the AM bands have been used since radio first started in the 1920s. The DRM system uses existing AM broadcast frequencies to deliver near-FM quality digital sound. It uses compression to squeeze clear digital sound into the narrow radio channels that currently carry crackly analogue signals.

The DRM technology has the potential to make digital radio available in places that Digital Audio Broadcasting (DAB) radio or even FM will probably never reach. As for the hardware required to hear these stations, there will be a new consumer DRM radio in the shops by

Christmas 2005 and a tiny PC-only DRM set is already on sale.

DRM is not being used by many radio stations yet. However a number of radio stations have seen the potential for new cross-border radio stations.

A Germany-based music station is believed to be in the planning stages. BBC World Service and its counterparts abroad already have some regular DRM programmes and are backing the system.

DRM is being seriously considered in many countries where the FM radio band is full. China sees DRM as the answer to pushing digital radio across its vast territory.

The UK is not planning to use DRM for domestic radio. The UK has pinned its digital hopes instead on DAB, which offers stations like BBC 1Xtra, 6 Music, Oneword and Core. More digital radios have been sold in the UK than any other country.

Switching-off analogue FM and AM may take years and making millions of much-loved analogue radio sets useless will no doubt be controversial. If power line internet transmission is introduced, then international broadcasting on shortwave may also be consigned to history due to the interference from data travelling over mains electricity cables.

For Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

As we go to air, the proponents of Broadband Over Powerline have not yet challenged the Digital Radio Mondiale findings. (W8HDU, N2MPN)

**

PRESERVING THE BANDS: LEAGUE KICKS OFF 2005 SPECTRUM DEFENSE CAMPAIGN

Meantime, the ARRL has kicked off its 2005 Spectrum Defense Fund campaign and its slogan id that this is a lot more than just BPL. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

ARRL President Jim Haynie, W5JBP, appears to be the point man in this important effort to preserve our operating bandspace. He says that while interference from broadband over power line technology is the most prominent and immediate threat to amateur spectrum, donations from ARRL members and supporters make it possible for the League to face it and other spectrum challenges as well.

According to the ARRL Letter, in 1985, the League spent perhaps $200,000 on advocacy and spectrum defense. Today the annual outlay is close to $900,000.

Haynie says that he is aware that this work is something that hams cannot see, touch or feel, but it's just as important as those things

that they can. This is because we would not have all those other things if it were not for the fact that we have a place to operate.

Haynie notes that not all of the ARRL's advocacy efforts necessarily involve taking defensive measures, such as with BPL, but all of them are essential. The popular ARRL leader says that, as he sees it, the League's job is to look out for the best interests of all of Amateur Radio. This includes making sure that we have places in the ether to go on the air.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The ARRL says that the Spectrum Defense Fund depends on membership support and is essential to the League's continued success in this AREA. Contributions can be made on-line at the ARRL's secure donor Website. You will find it at https://www.arrl.org/forms/fdefense/fdefense.htm Those contributing at or above the $50 level may request a gift as a token of the League's appreciation. (ARRL)

**

BIG DX NEWS: NCDXF MAKES $100,000 GRANT TO UPCOMING OPERATIONS

Some big news in the world of DX. This as the Northern California DX Foundation announces some big money sponsorship grants for the 2005 D-Xpedition season.

The awards were announced at the recent W9DXCC DX Convention in Illinois. The recipients are the upcoming Kerguelen Islands FT stroke X and the Peter One 3YZ0X operations. These are two of the rarest and most wanted locations on every hams most wanted list.

Northern California DX Foundation president Len Geraldi, K6ANP, says that that these awards are substantially higher than normal amounts provided to aid major D-Xpeditions. Together they exceed $100,000, and represent the largest made in the foundations history.

Geraldi noted that these exceptional grants made in light of the rarity of operations from these locations and the significant individual contributions being made by the participants. He also noted the very high cost of mounting D-Xpeditions to such remote locations.

The Northern California DX Foundation not only funds DX operations. In cooperation with the IARU, the organization also maintains a worldwide network of high-frequency radio propagation beacons that help amateurs estimate the current condition of the ionosphere.

The Northern California DX Foundation was founded in 1972 to assist worthwhile amateur radio and scientific projects with equipment and funding. More about the group is on-line at www.ncdxf.org and we will

have more D-X news later on in this weeks newscast. (N4GN)

**

Break 1

Its time for you to identify your station. Cue the announcer. Dick Tyler, WA2EHL if you please:

"From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including WA2EHL on Live 365 from Burlington, New Jersey."

RESCUE RADIO: HURRICANE IVAN IS BACK AND JEANNE ON THE WAY

A reincarnated tropical storm Ivan has made landfall a 2nd time. This, near the Texas-Louisiana line on Thursday evening, September 23rd. The one-time hurricane was expected to dump up to ten inches of rain over the coming weekend.

The 22-day-old former hurricane broke apart after hitting the U-S, but a piece spun back out to sea and reformed as a separate tropical storm. It them made its way back into the Gulf of Mexico before again making landfall.

Forecasters say Galveston, Houston and College Station Texas will be under a flood alert. C-Q Magazine's Bob Josuweit, WA3PZO quoting sources at the ARRL says the Texas Office of Emergency Management has requested activation of the Amateur Radio Emergency Service Net. The net will switch between 7.285 and 3.873 MHz depending on propagation and time of day for as long as its needed.

Meantime, along the Eastern seaboard, ham radio operators are preparing for the arrival of Hurricane Jeanne. This as the killer storm appears to be zeroing in on the southeast U.S. coast, with forecasts putting Florida firmly in the storm's sights with landfall possible on September 24th or 25th. The Hurricane Watch Net on 14.325 MHz announced plans to begin operations Friday, September 24, 2004 at 10:00 a.m. Eastern and continue till until 11:00 p.m. or until the 20 meter band closes .

As we go to air news reports say that Jeanne is responsible for at least 1,100 deaths in Haiti. 1,250 are still missing and the toll continues to rise. More ham radio storm coverage next week. (WA3PZO, CQ, ARRL, ARNewsline(tm), others)

**

RESCUE RADIO: HURRICANE IVAN IN NJ

Hurricane Ivan left its mark all along the Eastern U-S before it finally disappeared from that area. From the Carolina's through New England, there were daily news stories about Ivan spawning tornadoes and severe flooding. One area hit by the remnants of the storm was the state of New Jersey which is the home on Amateur Radio Newsline's Henry Feinberg, K2SSQ.

--

Mercer County, New Jersey, ARES and RACES was activated at about 5 PM on Saturday, September 18th. This, to staff the radio room at the Mercer County Emergency Operations Center.

Heavy rainfall caused by Hurricane Ivan remnants in the Catskill and Pocono Mountains Friday night was forecast to cause the Delaware River to reach flood stage in Trenton at 6 AM Sunday and to crest at record levels Sunday night.

The original crest forecast was for 8 feet above flood stage which is 18 feet above normal river level. That was later reduced to 3 feet but was still the highest level on the Delaware River since the catastrophic floods of 1954.

In Mercer County, Amateur Radio Operators staffed the E-O-C radio room continuously in four hour shifts until Monday morning. The radio room is licensed as W2MER and has H-F, 2 meter, 220, 440 and APRS ham gear permanently installed. It also has capability on all public safety and Red Cross frequencies used in the county. Extra radio amateurs were on call over the W2ZQ Mercer County ARES and RACES 146.67 Mhz. repeater. This, if additional communications was needed at shelters and other locations.

Hams used the New Jersey Office of Emergency Management's statewide NJ2EM 220 MHz repeater and the statewide 2 meter APRS digital messaging network to maintain links with the Hunterdon County and Warren County EOC's further up the river. Per the Mercer County EOC protocol, the hams also were the operators of the public safety radios in the EOC to maintain contact with the sheriff officers coordinating the evacuations along the river.

Amateurs participating as EOC Radio Officers included N2GJ, N0YMV, K2GW, W2SRH, W2QOB, N2JV-P, and WA2KM.

For he Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ, in New Jersey.

--

Gary Wilson, K2GW, is the Section Emergency Coordinator for Southern New Jersey Section. He says some 1500 people including 180 residents of a nursing home were evacuated to near-by shelters and hotels on Sunday the 19th. (K2GW)

**

RESCUE RADIO: XM SATELLITE RADIO TO ISSUE EMERGENCY ALERTS

There will soon be yet another source of emergency alert information, and you might say that this one is out of this world. Well kind of. Norm Seeley. KI7UP, has the details:

--

X-M Satellite Radio says that its getting into the emergency alert business. This by making available the X-M Emergency Alert channel to its more than 2.1 million subscribers, nationwide.

According to a September 10th press release the satellite radio provider will dedicate its Channel 247 to what it calls X-M Emergency Alert. The service will be dedicated to providing updated critical information before, during and after natural disasters, weather emergencies and other hazardous incidents to listeners across the country. The channel will also provide key survival information such as evacuation routes, shelter locations and updated weather emergency information for impacted areas.

Information sources of the broadcasts will include the Federal Emergency Management Agency, the National Oceanic and Atmospheric Administration, the National Weather Service, the U.S. Department of Health and Human Services and the American Red Cross. Also included will be local police and fire departments and eyewitness reports making the service about as all encompassing and up to the minute as it can get.

--

X-M hopes to have this new service fully operational fairly soon. (XM)

**

ENFORCEMENT: FCC QUESTIONS 40 METER MORSE PRACTICE OPERATION

The FCC has some questions for a Missouri ham who claims to be running Morse Code Practice on 40 meters. And in a September 2nd letter to Paul D. Westcott, KC0OAB, the regulatory agency also sets some pretty tough ground rules for him to carry on. Amateur Radio Newsline's David Black reports from our South-East bureau in Birmingham Alabama:

--

The FCC contacted Paul D. Westcott, KC0OAB, on June 21st of this year. The Commission told Westcott it was receiving complaints about high speed one way Morse code transmissions from his station on the 40 meter band. The Commission says it has complaints alleging that the ongoing transmissions interfere with normal amateur communications.

Westcott replied July 11th, saying his transmissions are indeed code practice, and he indicated that they are computer controlled. But the Commission now says Westcott's code transmissions are sent at an unvarying speed of about 30 words a minute. That they are sent continually, 24 hours a day, on 7.030 MHz. The Commission says the constant speeds casts doubt on Westcott's claimed motive for sending

the code transmissions.

The Commission reminds Westcott about amateur radio service rules requiring that a station be under the direction of a control operator during all transmissions. That means a control operator must be on duty at all the times Westcott's station is transmitting...and that he's responsible for preventing harmful interference to other stations.

The Commission tells Westcott to provide the dates, times and frequencies of all code practice sessions. And the FCC says that information is to be furnished by Westcott by either telephone or FAX at least one week in advance of any given transmission.

The Commission also wants Westcott to submit the name, address and telephone number of the control operator for all operation of KC0OAB when sending code practice. The FCC says the telephone number Westcott provides must be one at which the Commission can reach the control operator during the transmissions.

Finally, the Commission warns Westcott that enforcement action against him is coming if there are valid complaints that his transmissions continue to interfere with ongoing communications.

For the Amateur Radio Newsline, I'm David Black, KB4KCH, at the South-East bureau in Birmingham Alabama.

--

Westcott was given twenty days from the date of the FCC's letter to respond with the required information. (FCC)

**

INTRUDER WATCH REDUX: STRANGE SIGNALS AT 7.238 MHZ DISAPPEARS

And that strange unidentified signal that Bob Gonsett W6VR reported to us on two weeks ago. The one being heard by hams in Western states on 7 point 238 Mhz? Well guess what. It has disappeared as mysteriously as it showed up and nobody is very sure of exactly what it was.

According to several Newsline listeners and our own monitoring, the last time the raspy buzz saw was heard it was late on Wednesday September 15th. By the 16th it was gone without a trace and has yet to pay the 40 meter phone band -- or any other ham band for that matter -- a return visit. (ARNewsline(tm) from listener reports)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

THE SOCIAL SCENE: SWL'S MEET IN CALIFORNIA IN OCTOBER

Turning to the social scene. the 2004 Radio Fest gathering of SWL's is slated for Saturday, October 16th. This, in the Community Room of the F&M Bank in Seal Beach, California.

Radio Fest is sponsored by the Southern California Area DX'ers group. Doors open at 9:30 Pacific Coast time. This years speaker list include Radio School's Gordon West, WB6N0A, plus representatives from the broadcast and short-wave sectors of the listening hobby.

Interested? Well, for more information please contact Stewart MacKenzie by e-mail to wdx6aa@earthlink.net or phone 714-846-1685 during normal business hours on the U-S west coast. (SCADS)

**

WITH THE HANDIHAMS: 2005 CALIFORNIA RADIO CAMP ANNOUNCED

And the Handihams have announced that the 2005 California Radio Camp will be the week of February 27th through Sunday, March 6th. If you are a member with a disability and want to attend, please contact Handiham headquarters for a camp application package. You may either call the office toll-free at 1-866-426-3442, or e-mail hamradio@courage.org. (HandiHams)

**

RADIO EDUCATION: ARRL TEACHERS INSTITUTE

And a quick note on the highly successful ARRL sponsored first Education and Technology Program Teachers Institute held the second week of August. During the week long program Mark Spencer involved the teachers in hands-on activities for integrating wireless technology, Amateur Radio, Amateur Radio on the International Space Station and other space-related activities into their math and science classroom curriculum. And word is that at the end of the week the teachers had enjoyed themselves so much that some said they weren't ready to go home. (ARRL, ANS)

**

ALL POINTS BULLETIN UPDATE: $25000 REWARD OFFERED TO CATCH TOWER ARSONIST

An update to our story three weeks ago about a fire bug who seems to hate radio. A $25,000 reward is now being offered information leading to the arrest and conviction of the person setting fire to radio towers in the Clark County and Portland, Oregon during the past six weeks including a blaze that burned down a ham radio operators home.

The most recent fires, set close together occurred on September 9th in Portland. This, only 12 hours after a federally led task force asked

for the public's help in finding the man they think might be a serial arsonist working alone.

John W. McMahon, a supervisor with the federal Bureau of Alcohol, Tobacco, Firearms and Explosives told the press that a task force was offering a top reward of $10,000 for information leading to the suspect's conviction. Comcast, whose service was interrupted by one of the fires, added $15,000 to the reward. This raises the bounty on the fire bugs head to $25,000.

The fifteen member task force investigating the incidents has concluded they were linked to 12 communications tower fires set since July 29th. The most recent fires will raise the estimated damage done by the arsonist to more than $250,000. The 11 previous fires had targeted communications towers or equipment and one private Amateur Radio tower.

As previously reported, the ham-radio tower fire, which was set August 20th. At that time it was the seventh incident and spread to an adjacent rental house, leaving it badly damaged. The resident, John Stein, AB7F, cut his hand trying to put out the blaze before firefighters arrived.

And a group of Public Safety organizations that is trying to help capture the serial arsonist has published a wanted poster complete with pictures. You can find it as a PDF file of it at www.sbe124.org (Portland SBE, others)

**

HAM RADIO IN SPACE: KE5AIT COMPLETS CONTACTS WITH 7 CONTINENTS

Yet another ham radio record has been set . On Saturday September 11th, Mike Fincke, KE5AIT became the first crew member of the International Space Station to talk to all 7 continents using amateur radio. This, when he made contact with Palmer Research Station Amateur Radio station.

During the contact Fincke spoke with Chuck Kimball, N0NHJ, while a packed radio room at the center listened in. Fincke and Kimball compared life in the two stations, discussed time zone differences and the experiments involving fluids that Fincke was working with.

Fincke is believed to be only the third astronaut to accomplish this all continent feat. The last such occurrence was in 1992 aboard STS-45 when astronauts David Leetsma and Kathryn Sullivan also talked to Palmer Station to complete their continent contact list.

Fincke will be finishing his tour in the middle of October when Expedition 10 Astronaut Leroy Chiao, KE5BRW, and Cosmonaut Salizhan Sharipov will come aboard. (Courtesy of Kenneth Ransom, JSC)

**

NAMES IN THE NEWS: G3YJO NAMED VISIONARY AND INNOVATOR

And word that Space News International on the Space dot com website has honored a UK ham. This as it names Professor Martin Sweeting, G3YJO, as one of the top space visionaries and innovators.

In a recent article the news service said that Sweeting turned Surrey Satellite into the world's microsatellite builder. Also that under his guidance this British company has trained a new generation of spacecraft builders throughout the world helping countries like Turkey, Thailand, Korea and Chile enter the space age. (GB2RS)

**

HAM RADIO NEAR SPACE: AMATEUR RADIO HIGH-ALTITUDE BALLOONS

Attention East Coast hams. The first SimSat engineering test balloon flights are targeted for launch on Wednesday, September 22, in the Maryland and Virginia area. These two experimental exercises are designated SimSat-1A and SimSat-1B. This is a good opportunity to show a local students how to receive the balloon's simple telemetry beacon. (ANS)

**

WORLDBEAT - CANADA: NEW CALLSIGN OROPOSAL

The Canadian national ham radio society Radio Amateurs of Canada has submitted a proposal on Amateur Radio Call Signs to Jan Skora. He is Industry Canada's Director Genera for the Radiocommunications and Broadcasting Regulatory Branch.

The Proposal, as approved by the Radio Amateurs of Canada Board of Directors, makes recommendations on changes to Call Sign Policy and Special Event Prefixes. This, all comes as the result of the WRC-2003 decisions amending the ITU International Radio Regulations to permit call signs in the Amateur Service to have up to four characters in the suffix. (RAC)

**

DX

In D-X word that HA0HW and HA4DX are active as J45HW and J45DX respectively. This, from the isle of Rhodes through the 3rd of October. Activity will be on 40 through 10 meters using CW, SSB, RTTY and PSK31. QSL as directed on the air. (GB2RS)

And TA3J will activate the special callsign TC2K4J. This, from September 24th to November 2nd in memory of 40 Turkish Radio Amateur Silent Keys. Activity is on 160 to 2 meters using all modes. (GB2RS)

**

THAT FINAL ITEM: PART OF THE BEEB ON THE BLOCK

And finally this week it look as if a piece of radio history may be up for grabs. This with word that part of the world renowned B-B-C World Service is for sale.

The United Kingdom's publicly funded British Broadcasting Corporation has reportedly approached Germany's Bertelsmann Corporation along with U-S media giants Time Warner and the Walt Disney Company as potential bidders for BBC Worldwide. BBC executives expect the division, which includes BBC America, BBC Prime channels and 26 magazine titles could be worth up to 3.5 billion dollars of needed revenue.

The U.K. government is currently reviewing the BBC's funding and license. One report said that the broadcasters internal review of its options appears to be timed to coincide with the government's evaluation as well. (W8HDU, Bob Ulm, WDOH-FM)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). What would Len have us do, Mike?

> >>>> It is hard to control what Jim posts.

Not for me!

> >>>> It would be a lot easier if you were the moderator.

> >>> I'm not the "moderator" in here. This is an open forum.

But Len wants to be the moderator. He seems to want to squelch all
opposition to his opinions.

> >>> Problem is, a few do NOT want that...they want a cozy little chat
> >>> room filled only with their own kine. They are the ones polluting.

Len projects his own actions unto others.

In my 7 years of reading rrap, I have seen only *one* case where
someone literally told someone else to "shut up". That was when Len
told K8MN to

"shut up, you little USMC feldwebel"

October 2003, I think.

(If there are more, I missed them - some posters here are so verbose
it's just not practical to read everything they write).

> >> I couldn't agree more!

> > Then why do you support and condone their actions by saying
> > nothing against their egregious conduct?

> it to suit you.

Nor will I.

Perhaps that is the real issue with Len. I think you hit on it some posts back, Mike. The Len/Brian/Steve troika must get some kind of return for all the name calling and insults. But that's obviously not enough for Len, so he tries to get a similar setup going with you. It would probably make him happy if you started calling him names, insulting him personally, etc., because then he could return it in kind and then some.

But instead you just keep on being mild-mannered Mike, not backing down but not returning in kind, either. You won't play his game or get down to his level.

Nor will I. Heck, I can't remember all the names Len has invented for me to avoid calling me "Jim" or "N2EY". Let's see....there's "Jimmie" (note the feminized ending), "Jimmie Who", "Rev. Jim", "negative j", "Miccolis", etc.

What purpose does all that serve?

> >>> Since the PCTA first had their hobby-orgasm over a code key.

I like Morse Code. In fact I probably *love* Morse Code. But the above is just not correct.

> >>> They think that all radio communications revolves around morse
> >>> code and morsemanship.

Wrong again!

> >>> It hasn't been so for decades, but
> >>> they are Believers and will not listen to reason.

Note the equation of "reason" with "agree with Len".

> >> But I'm PCTA and aren't anywhere close to that.

Me neither.

> > Yet you've bought into the morsemanship-is-all ethos and condone
> > the polluters.

Not true at all.

> > Tsk. You fail to understand simple sarcasm, Coslo.

> Sarcasm doesn't work well in print.
>
> > No one is "oppressing" me.
>
> BINGO! You post as you se fit.

Yet Len tells others here to shut up - literally, as in the
"feldwebel" post, and in other ways as well.

> > I'm simply persistent and confrontational on the issue of keeping a
> > morse code test for any radio license in this new millennium.

Without ever telling us why.

Those are other radio services, not amateur radio.

> > No morse code test passing-for-authorization is required for any
> > military personnel operating military radios below 30 MHz.

>
> I suspect no test is needed, beyond training to operate the equipment.
> Could be wrong.

Amateur radio is different from those other services. For example,
we're allowed to design/build/repair/align and operate our stations
without any certification or other "type approval" rules. We aren't
limited to predefined channels or spot frequencies, except on 60
meters. We have a large selection of modes and techniques available,
with very few regulations hindering them.

> > A half century ago there was NO requirement that military personnel
> > had to test for morsemanship to operate high-power HF transmitters

> > signmalmen "got the message through" (familiar phrase of the Army
> > Signal Corps).

Here we see a typical example of Len-distortion.

He's obviously talking about his time at ADA.

Now - did the US Army not use any morse code after 1952?
How about the US Navy? COast Guard? Air Force? Marines?
>
> > Citizens Band Radio Service operating below 30 MHz became legal

> > only that, CB became licenseless a few years later. [1958 is 46 years

> > ago, back when nearly all radios still used vacuum tubes]

More distortions.

27 MHz cb was and is limited to low power using only approved
equipment on a set of channels all close in frequency. No transmitter
adjustments at all except channel selection. No homebrewing allowed,
no modifications to equipment allowed. And the license requirement was
dropped in the 1970s, almost 20 years after the 27 MHz channels were
authorized.

Most important of all, cb is hardly the example amateur radio should
follow.
>
> No test at all is required for Citizen' band radio.

Perhaps Len wants *all* amateur radio tests eliminated.
>

> > known as "data" with sustained rates of 300 WPM, then 1200 WPM,
> > then 4800, 9600, and finally, 56K WPM...whether by wire or radio.

"Teleprinters" (which we hams call "RTTY machines" were large, heavy,
noisy and very expensive. Most hams could not afford to buy them and
their related equipment new. Some hams had machines through surplus
and MARS channels, but until the PC era, RTTY modes were pretty much a
limited specialty in ham radio.

Do you think Len ever bought a new teleprinter for hobby use with his
own money?

> > below 30 MHz by amateurs. That is still required.

That's a good thing.

> > Can you say that U.S. amateur radio regulations (and testing) is
> > behind the times?

Nope.

> > It most certainly is.

Not at all.

> > Has been for a long time.

Hams still use Morse Code. Extensively. Therefore, a Morse Code test
is appropriate.

> No, i can't. Unless you are saying you want no testing at all for HF

> testing for the Amateur Radio service, Well, I *most* respectfully disagree!

Bingo.

> >> I guess history must be bad, huh?
> >
> > For U.S. amateur radio in comparison to the rest of the radio
> > world, it IS "bad."

What is bad about history? What is bad about doing what someone likes
to do?

To use one of Cecil's phrases: "What is wrong with live and let live?"

> > "Bad" in that it lags far beyond the state of the radio art...supported
> > only by the radio designers and manufacturers using developments
> > from the rest of radio to modernize amateur transceivers so that they
> > can best "work" on-off keyed carriers a la the 1920s.

Ah - so it's not just the Morse Code *test* which Len thinks is bad,
but Morse Code *use* by hams!

> State of radio art would not pe permitted in the ARS.

By whom would it be prohibited?

> >>> There's only a few PCTA extras in here. But, they are resolute
> >>> and quite uncivil in condemnation of all those who do not love,

> > and that amateur radio can no longer by "qualified" by radiotelegraphy
> > skill demonstrations. PCTA wound far too easily.
>
> Respectfully disagree. You make the statement, please provide the proof.

"The world has advanced" means "you should not use or enjoy Morse Code
any more".

I guess people who like sailboats, stick-shift cars, horseback riding,
bicycles and a bunch of other pursuits should listen up too...
>

> >>> For most folks, that rule-by-intimidation isn't comfortable, isn't

"Radionews" <radionews@aol.com> wrote in message
news:20040924125350.08263.00001341@mb-m06.aol.com...

: The FCC contacted Paul D. Westcott, KC0OAB, on June 21st of this year.
: The Commission told Westcott it was receiving complaints about high
: speed one way Morse code transmissions from his station on the 40
: meter band. The Commission says it has complaints alleging that the
: ongoing transmissions interfere with normal amateur communications.

Whenever the band is open up here to the mid-US this station is still there, seemingly 24/7, broadcasting an endless mixture of biblical and pseudo-patriotic nonsense. This religious/propagandist babble doesn't belong on this narrow international band.

Right. I'm the "only one" signing off posts for over a year using a Yiddish pejorative meaning "penis head?"

I'm the "only one" who has implied opponents are pedophiles and accusing them of spousal abuse...in addition to being "pathological liars?"

Of course. Terrible behavior. Gratuitously egregious.

:-)

Mother superior should be aware of Jim Kehler, KH2D, and his actions in here as one of the ardent (if not virulent) PCTA super extras and the wonderful "No SSB International."

Mother superior* should be aware of one Eric June who tried to take over that position in here...Cecil Moore [of the "live and let live" saying as an NCTA] confounded him at every turn.

[* that is NOT a religious title]

Tsk, tsk, tsk. All that hopping up and down about "rude behavior!" And to a Lord High God of Radio(telegraphy)!

Maybe you want your congressperson to start a bill to abrogate all free and independent thought and expression by U.S. citizens against the morse code test? That ought to end any conflict and make you oh-so-happy.

"Tension, apprehension, and dissention have begun..." - from Alfred Bester's "The Demolished Man."

With all the best of kindest regards for your moral superiority,

LenAnderson@ieee.org

>insulting him personally, etc., because then he could return it in
>kind and then some.

Tsk, tsk, and a tut, tut...

Lord High Gods of Radio are ABOVE such plebian pursuits.

THEY don't "do" such things as call anyone names...such as a
cute little Yiddish pejorative for "penis head," imply pedophilia
or homosexuality, nor (lately) imply any opposition is "guilty" of
spousal abuse. PCTA extras just don't DO such things, do they?

Of course not. The PCTA is way, way above such things, free
and open on everything...provided it all agrees with their view of
reality (distorted as it is).

>But instead you just keep on being mild-mannered Mike, not backing
>down but not returning in kind, either. You won't play his game or get
>down to his level.

Tsk. "Down to 'his' level." :-)

>Nor will I. Heck, I can't remember all the names Len has invented for
>me to avoid calling me "Jim" or "N2EY". Let's see....there's "Jimmie"
>(note the feminized ending), "Jimmie Who", "Rev. Jim", "negative j",
>"Miccolis", etc.

Poor baby. Feel hurt do you? Tsk.

>What purpose does all that serve?

:-)

>> >>> Since the PCTA first had their hobby-orgasm over a code key.
>
>I like Morse Code. In fact I probably *love* Morse Code. But the above
>is just not correct.

Well, you go right ahead and just have a ball with morsemanship.

If that makes you feel oh-so-very superior, go for it.

Now explain why all YOUR personal favorite things MUST be the
standard for all to follow in the Archaic Radiotelegraphy Society?

All you've implied so far is that all those that do not "love" your
favorite activities are so far beneath you that you almost have no
contempt of them...

>> >>> They think that all radio communications revolves around morse
>> >>> code and morsemanship.
>
>Wrong again!

Yes, "wrong." The strident Lord High Gods of Radio(telegraphy) get on
computers and spew contempt for all those that do not believe in Them
or Their Wishes.

Sigh.

>> >>> It hasn't been so for decades, but
>> >>> they are Believers and will not listen to reason.
>
>Note the equation of "reason" with "agree with Len".

Tsk, tsk, tsk. :-)

>> >> But I'm PCTA and aren't anywhere close to that.
>
>Me neither.

Tsk. How could anyone possibly believe you to be far-to-the-left,
meter needle pinned and wrapped around the stop post, could be
anything but "fair?"

Someone should put a stop to such heretical thoughts...such as
the threat to use their "professional standing" to pick up a phone
and have the authorities come and cart away the doubters. :-)

>> > Yet you've bought into the morsemanship-is-all ethos and condone
>> > the polluters.
>
>Not true at all.

Absolutely not! Tsk, tsk. Lord High Gods of Radio(telegraphy) along
with mother superiors are THE world. THEY determine what is "right"
and "wrong," not the ordinary mundane mortals of the citizenry being
so lowly/wrong for having independent thought. Tsk, again.

>> > Please don't try to use political spin on what you've posted. You
>> > aren't in the political pro leagues yet...they've had centuries to

Poor baby. Tell a snarly nasty arrogant Lord High God of Radio to
"shut up?"

Oh, my...capital offense! Death to the Unbelievers!

>> > I'm simply persistent and confrontational on the issue of keeping a
>> > morse code test for any radio license in this new millennium.
>
>Without ever telling us why.

Of course "no other reasons ALREADY posted" are sufficient for the
Lord High Gods of Radio(telegraphy). :-)

THEY have decreed that radiotelegraphy is the ne plus ultra, the
Ultima Thule of the amateur radio arts. All who disbelieve "must
prove" the Lord High Gods wrong... :-)

>> And of course your method doesn't work very well for changing anyone's
>> mind. But it works perfectly if you want to engage in some nose tweaking
>> for the sheer joy of irritating someone.
>
>Which says it all, really.

Tsk. The "Tycho Brahe" of the newsgroup need a new nose?

* Tycho Brahe was a north European astrologer-astronomer who wore
a brass nose to cover up loss of nose due to infection during childhood.
The crater Tycho on the Moon is named for him.

>> >>> If the PCTA feel it so necessary to make all ham radio newcomers

>>
>> No test at all is needed
>>
>Those are other radio services, not amateur radio.

Yes. Shun the "others." Those "others" never apply to saintly, noble
Archaic Radiotelegraphy Society ethos and mores.

The Archaic Radiotelegraphy Society is the only living museum of
ancient skills of the "pioneers" of radio, overly-proud, the few good
men of the corps(e) that once was.

>Amateur radio is different from those other services. For example,
>we're allowed to design/build/repair/align and operate our stations
>without any certification or other "type approval" rules. We aren't
>limited to predefined channels or spot frequencies, except on 60
>meters. We have a large selection of modes and techniques available,
>with very few regulations hindering them.

Tsk. If Spark wasn't outlawed, the Archaic Radiotelegraphy Society
would stil be using spark methods and have a long parchment roll
of rationalizations to do so... :-)

>> > A half century ago there was NO requirement that military personnel
>> > had to test for morsemanship to operate high-power HF transmitters
>> > using then-state-of-the-art communications techniques. All us
>> > signmalmen "got the message through" (familiar phrase of the Army
>> > Signal Corps).
>
>Here we see a typical example of Len-distortion.

Poor baby. Never served, did you? Never were involved in any military
communications...or even government communications, were you?

What have you to "judge" on all that? Three decades of being an
amateur, a hobbyist, a dilletante in radiotelegraphy?

>He's obviously talking about his time at ADA.

Tsk. That only BEGAN my HF radio experience...a half century
ago. My radio communications experience has continued ever
since through many locations, many parts of the EM spectrum.

More tsk. For one who tried to be a hip mother superior with
the distorted quote of "It ain't braggin' if ya done it," you are
certainly the hypocrite.

You fail to see that I did it and am not bragging about it.

But, since you didn't, you have to denigrate it to remain a
mother superior.

>Now - did the US Army not use any morse code after 1952?
>How about the US Navy? COast Guard? Air Force? Marines?

How can the mother superior judge? Were you involved in any
of those military communications activities?

Tsk. You've not claimed anything in that regard.

>> > Citizens Band Radio Service operating below 30 MHz became legal
>> > in 1958 in the USA, absolutely no morsemanship test involved. Not
>> > only that, CB became licenseless a few years later. [1958 is 46 years
>> > ago, back when nearly all radios still used vacuum tubes]
>
>More distortions.

Just like the FCC is a "distortion." :-)

FCC began Class D Citizens Band Radio Service in 1958. There was
NEVER any test involved in geting the first licenses for Class D CB.

>27 MHz cb was and is limited to low power using only approved
>equipment on a set of channels all close in frequency. No transmitter
>adjustments at all except channel selection. No homebrewing allowed,
>no modifications to equipment allowed. And the license requirement was
>dropped in the 1970s, almost 20 years after the 27 MHz channels were
>authorized.

And now there are millions of CB radios being used every day. :-)

Mothers superior don't want to acknowledge any of that...it is
below them. :-)

>Most important of all, cb is hardly the example amateur radio should
>follow.

No one said it should. :-)

Feel free to manufacture all the false motives you wish...you've already
done that "countless times." :-)

CB transmits on the ancient, once-upon-a-time amateur 11m band.
That band is located within the HF spectrum. No morse code test
is required to prove "qualifications" to transmit in that HF band. :-)

>> No test at all is required for Citizen' band radio.
>
>Perhaps Len wants *all* amateur radio tests eliminated.

Tsk, tsk. More FALSE and MISLEADING manufactured "motive."

Poor baby...if you check back through DejaNews or Google archives
you will find that I've advocated larger, harder written tests for U.S.
amateur radio. I've also advocated having the VEC QPC use a far

larger than 10-minimum-questions in the QPC.

As Hans likes to say, "Sunnuvagun!"

>"Teleprinters" (which we hams call "RTTY machines" were large, heavy,
>noisy and very expensive. Most hams could not afford to buy them and
>their related equipment new. Some hams had machines through surplus
>and MARS channels, but until the PC era, RTTY modes were pretty much a
>limited specialty in ham radio.
>
>Do you think Len ever bought a new teleprinter for hobby use with his
>own money?

Actually, THREE, but not for radio hobby use. As substitutes for
formerly-expensive TDDs (Telecommunication Devices for the Deaf).
All from Western Union surplus. Helping out retired telephone
workers doing charitable service about two decades ago.

If you wish to call a charitable service a "hobby," feel free.

I know you just love to manufacture falsies in regards to my activities,
so get your production line in order...

>> > GPSS has been with the world (along with GLONASS) for two decades

>> > daily, geographic boundaries seldom a limit, with no disturbance from
>> > the ionosphere affecting HF. It is mass communications worldwide.
>
>And it's not radio.

WRONG. It's "radio" if it has a wireless link. :-)

>Has the internet replaced amateur radio?

Some of it. Mother superior is in here writing long epistles of ancient
times...instead of operating all those ham thingies... :-)

>> > Cellular telephony, enabled through radio, has become a standard
>> > means of communications for Americans. So much so that one in
>> > three Americans has a cellular telephone subscription...about 100
>> > million using those tiny, low-microwave-radio-range, portable radios
>> > to access the telephone infrastructure.
>
>Not on HF either.

HF too limited for mass communications of millions of two-way
communications users.

Do you wish all 100 million cell phone users to take a morse code
test to "prove their dedication and committment to radio?" :-)

>> > All that while, during a veritable many-quantum-level-jumps in
>> > technology, U.S. amateur radio "qualifications" (test regulations)
>> > have required the morsemanship ability test to authorize operation
>> > below 30 MHz by amateurs. That is still required.
>
>That's a good thing.

INCORRECT.

PROVE YOUR WORK.

>> > Can you say that U.S. amateur radio regulations (and testing) is
>> > behind the times?
>
>Nope.

YUP. You've still not changed the ARS name to Archaic Radiotelegraphy
Society...

>> > It most certainly is.
>
>Not at all.

Tsk, tsk. This year is 2004, not 1934. :-)

>Hams still use Morse Code. Extensively. Therefore, a Morse Code test
>is appropriate.

WRONG.

ERROR.

FAILURE.

>What is bad about history? What is bad about doing what someone likes
>to do?

Tsk. Why do you wish to force all amateur newcomers to do as you
did long ago?

Why are you so important that all must follow your example?

Tsk, tsk. If morse code use is "so much fun," then its use will continue on its own sake...NO morse code test is necessary.
As Cecil Moore used to say in here "What's wrong with live and let live?" [Cecil is a NCTA]

The World Radio Conference of 2003 agreed and dropped the international administrative requirement for morse code tests of all amateur radio licenses having operating privileges below 30 MHz.

As Hans likes to say "Sunnuvagun!"

Socialism likes lots of government oversight - like a lot of tests to
make sure that you really, really, really want to be a ham.

Yep.

Part of that was their license system, which required things like demonstrated ability as an SWL before getting a transmitting license, and *required* the construction of equipment of a certain complexity from scratch.

Another part was economic - homebrewing was effectively the only way many Soviet hams could get on the air.

> What would Len have us do, Mike?

You can't think of what to do. It's so very, very sad.

You can block Len and not reply to direct questions or responses, all
for calling you "Rev. Jim," but you can't seem to come up with an
answer of your own on what to do with Steve.

They say that "sticks and stones (and bricks and knives) can break my
bones but names will never hurt me."

Len has called you "Rev. Jim!"

It's just awful!!!

Len hasn't suggested that "someone" might show up at your residence
and throw bricks through your window, slash your tires, or terrorize
your wife. He merely called you a name and you block him and won't
reply to him.

But oh my, what do do about Steve?

"He's such a swell guy and he didn't suggest harm would come to -my-
family. Besides, he likes code tests, and there are fewer and fewer
of those kind each day. Oh, what to do? What to do?"

"I'll give him just one more chance."

Hi, hi!

Validity in their reasons? It could be said that reasons you've set
forth for the elimination of morse testing don't have validity.

> They are all into the fantasy of "brotherhood" in the "fraternity."

For the most part, the idea of "brotherhood" and "fraternity" are very
much alive in amateur radio. Then again, you've never been involved so
you might be excused for not knowing.

> And of "service to their country" by engaging in a hobby...

Quite a number of radio amateurs are involved in service to country, to community and to amateur radio itself. Then again, you've never been involved so you might be excused for not knowing.

There are certainly records, Leonard, but you were there. If Jim's number of personnel present is incorrect, set the record straight. But that isn't the issue, is it?

>I sure do wish we could have seen this thread stay alive without all the >trash that got wrapped up in it!

Would you like another story, Kim?

Here's one....

Back in 1968, age 14, I went on Field Day for the first time. Back then 6 meter AM was big in this area - lots of hams had 6 meter mobile rigs as well as home setups.

That FD, I wound up at the 6 meter AM (yes, on 'phone) setup late at night. The rig was a Lafayette HA-460 - 10 watts of AM with tunable receiver and transmitter. (While it was all in one box, it had separate dials for the receiver and transmitter frequency). Antenna was a 5 element Yagi at about 50 feet.

Fortunately my voice had changed enough by then that I never got "The WA3 YL station, please repeat....."

Now some might decry such a setup as "primitive", but we worked close to 200 stations with it - and we weren't serious contest operators at all. Nor was the club a serious contest outfit; it was just some folks who put on a half-serious FD with whatever came to hand.

With the beam and the conditions, we got as far north as Massachusetts, as far south as Maryland and as far west as Ohio. Lots and LOTs of EPA, SNJ, NNJ, and DE stations. Never a real band opening, though, or we'd have been all over the country.

The big challenge was those stations which were on SSB. In those days there were few amateur VHF SSB stations, but those few counted for points just the same. The HA-460 had no BFO, so the SSB was garbled as heck. But if you turned on the transmitter "spot" switch and adjusted the transmitter frequency dial *very* carefully, you could make some sense of an SSB signal if the other op repeated enough times. We pulled at least a dozen SSB-to-AM QSOs that way.

Stayed up all night (for the first time!) and operated while the grownups snoozed in their cars or went home. Got home about 3 Sunday afternoon, hot and tired, having had a great FD. That was also the first time I uttered the contester's immortal words: "Wait till *next* year!"

I still remember the call - WA3CCP, the old "ARTICS" radio club. (Yes, I know the right spelling is "arctic" but they spelled the club name differently. Stood for Amateur Radio Technical Inter-County Society).

36 years and 36 FDs later, it's still great fun.

That isn't much of a point. Almost no hams use teleprinters. Plenty of
'em still use morse code. Are you advocating a typing test for amateur
radio?

> Manual morse telegraphy was still used by the USN and USCG of
> 50 years ago, but on shipboard. Those were relatively small
> stations. USN networks of fixed-point to fixed-point were still relying

All very interesting and pretty much known by anyone with interest in
such matters. Are you advocating a test for encrypting/decrypting
messages for amateur radio?

> Olde-tyme hammes chafe at such reality. They have no real

> or thinly-disguised insults they claim as "civil."

I'm reminded of your claims of interest in "civil debate". I don't
recall you being very civil to anyone who disagrees with your ideas. I

haven't seen a lot of long time radio amateurs chafing either. Morse code is still in wide use in amateur radio. Basically, you whole schpiel boils down to a basic, "but I don't like it".

> Heh...the last time I was "bitter" was during a visit to Angostura.

> myself in the military, then the workplace, don't have to have rank,
> status, or some artificial privileges for a hobby radio activity.

You aren't unique. Many people are retired, have comfortable incomes and paid off mortgages. I can't see what having a workshop in the center of the house has to do with anything but perhaps it is a point of pride to you. How many of those retired, comfortable, mortgage-free types are self-appointed "advocates" for removal of a testing element in something in which they are not participants or would-be participants? How many of them spend hour after hour posting to a newsgroup dealing with an avocation in which they play no part? You don't have to worry a whit about your status in amateur radio. You have none.

> "Bitter?" I doubt it.

I don't.

> Old, yes. If one survives a long time on earth,

It certainly is fun. For a guy who claims that he needs no titles nor any status, you feel the need to restate yours of the past quite frequently.

> Tsk. The posturers can't stand up straight on subjects but have to
> resort to pejoratives on the "pokers." [their problem, not mine]

But, Leonard. You do those very things. It is quite odd that you are incapable of recognizing it in yourself.

> All that about a HOBBY. Tsk. Hi hi.

...one in which you play no part.

Some of us alto voiced YLs get the "you're off frequency" because they don't realize that we are YLs and just think we aren't tuned in right since we sound only a touch high to them!

Damn, Steve, you're taking on the habits of Len in getting your facts all muddled up! For years I've been arguing for a learners permit similar to the old Novice one-term permit. Point your browser to http://tinyurl.com/wce9 for the proposal I've sent to FCC.

"Just a month ago" I was "all over your case" not about the notion of a lerners permit, but about your dump huck "can't operate without a supervisor" license proposal.

Good luck on this one now!

Absolutely NO pretense, crusty old sea salt. As a many-times
published author in several different publications, I do have some
literacy background.

Not only that, I was a member of the first, and still surviving,
science fiction club (first worldwide, in fact) just down the street
a bit in North Hollywood. [SFWA] Need directions to get there?

Lots of the writers (not just science fiction) show up there from
time to time. I don't recall Vonnegut ever being there...he isn't
really mainstream SF, more of a literary-review favorite for the
Sunday supplements.

"Tension, apprehension, and dissention have begun..." :-)

Then why the homosexual and pedophilia inuendo? Any sane person would
call them attacks.

> I challenge your assertions.

Your assertions are squirelly. You prefer to make inuendo as well as
bald faced lies.

> You continue to make assertions of fact
> about your experience and skills in Amateur Radio, yet never pony up any
> validation of them.

Yet I remain a superior radio operator. Too bad for you.

> >> > He

> It's not my "games", Brian...They are yours.

They are not.

> You are the one making assertions of skill, knowledge and experience.

Nope, not me. Yet the fact remains that I am a superior operator when
compared to you.

> However there is NOTHING to validate any of it.

Doesn't need to be. I am sane. You are not. That makes all the
difference.

Yep, they'll block us but chum up to the pro-code testers no matter what.

That must be an indication of how hard-up they are for pro-coders.

Just another person willing to compromise his convictions so that "we
can all just get along."

In the end he didn't get along; his compromise was for naught; he
left.

Trying to appease terrorists just doesn't work.

> Mother superior* has outdone herself.

She's on the run.

I hope they decide to bring at least M16's. And tripple copies of
"thier" CSCE's to impress the warlords with. Maybe they'll wire
"thier" forward assists as code keys! Hi, hi!

> Neither of you were there before...yet you are all so damn Expert on

Even Heil, The World's Greatest Ham, blew it WRT what is legal in
countries without governments. He only has experience in countries
with viable governments - especially the one's that deny him amateur
privs!

So, after I explained what was needed for licensing, none have taken
the opportuinty to go operate from Somalia, not even that chickenliver
that has visions of flying bricks.

Maybe they're afraid of "Blackguard Down."

Who would they pray to?

There's a huge pile of updates of the ham regs which are overdue for
FCC review and revision. I expect that the code test issue will be
wrapped into some sort of major omnibus reworking of Part 97 a la the
Incentive Licensing package of 1968 or so except that this pass ought
to include a bunch more "real estate", 160 thru the millimeter bands
and far more topics "To take ham radio into the 21st century".
Someday. At their convenience. I'm not holding my breath here either.

> >That's nice. You're the reason I don't bother reading the FD rules

Yes.

> Wanna
> bet that it's pretty darn close to the truth?

Right off I dunno anything about current military HF comms. However it
strikes me that given Burke's job in that timeframe and place, running
around a USAF shipping/recieving dock with a clipboard chasing down
missing boxes, that he wouldn't have had much in the way of access to
HF comms gear. Not if decent security measures were in place. But like
I said I dunno so I'll pass.

> Not that we'll ever get the real story or even a straight answer...

We already got the only "story" which matters.

> 73 de Jim, N2EY

Hans is correct about amateur HF gear. Len is completely mistaken on the
subject.
>> >>
>> >> Tsk, tsk, crusty old sea salt.
>> >>
>> >> Frequency synthesizers began appearing in many radio services in
>> >> the early 1960s.

Yet they were not at all common in amateur radio. More important, those that
existed were not "modern" frequency synthesizers.

The claim made by Len was:

"None of that elaborate U.S. subdivision would be possible without the modern
frequency synthesizers ...."

which is clearly false because the "subdivision" existed any synthesizers as a
necessary condition.

All it took for a ham to stay inside the subbands was a frequency standard of
known accuracy. This could take the form of an accurately-calibrated receiver,
transmitter or transceiver, an external frequency meter (WW2 surplus BC-221 and
LM units were relatively inexpensive in the 1960s) or a 100 kHz oscillator with

suitable dividers.

It should be remembered, too, that in the early 1950s the amateur 160 meter band was subdivided into eight 25 kHz subbands. There was a complex system of subbands, showing allowed use by hams depending on location, frequency and time of day. It was by far the most complex system of "subdivision" in amateur radio, it required hams to stay within 25 kHz subbands, and it predated the 1960s by almost a decade.

>> >> In amateur radio they began with homebuilts since
>> >> the offshore manufacturers hadn't gotten around to putting those into
>> >> amateur transceivers until the late 70s. :-)

Incorrect on many points.

There were homebrew amateur synthesizers in use as early as 1962 (see QST for October, 1962, "The Ultimate Exciter", by Clifford Harvey, W1RF, and December, 1964 "A Crystal VFO With Full-Band Coverage" by Frank Noble, W3QLV, to name just two).

These units were "analog" synthesizers using heterodyne techniques. They were very complex, physically large and required a large number of quartz crystals on exact frequencies. The W1RF unit uses 30 crystals, four oscillators, three mixers and elaborate bandswitching in the synthesizer section alone. The W3QLV unit (which I owned from about 1985 to 1995) was less complex but still required 35 crystals on exact frequencies just to cover the 80 meter amateur band.

While within the capabilites of the advanced homebrewing amateur, they never became popular for reasons explained below.

In 1963, the manufactured B&W 6100 transmitter appeared on the market, with a heterodyne-type frequency synthesizer built in. It was not a commercial success, due in part to its high cost and lack of a matching receiver.

Besides cost, size and complexity considerations, those 1960s-era synthesizers were unpopular with hams for a very fundamental reason: They did not reflect the way hams operate on HF/MF.

Most "other services" are channelized or operate on specific predetermined frequencies. They need equipment that can be set to a specific frequency, and stay there, without the need to interpret a dial. Being able to tune through a band is not an important consideration. The "user interface" for these synthesizers (such as found in the military R-1051 receiver, the B&W 6100 transmitter, and the above homebrew units) is a set of switches for each digit of the frequency. Which works fine for operating on predetermined frequencies but very inferior to a simple mechanical "one knob" dial for tuning through a band looking for a clear spot or other QSOs. This user interface issue was resolved by making synthesizers that could emulate a mechanical "one knob" dial.

Additionally, the stability, precision and accuracy of self-controlled variable-frequency oscillators in quality 1960s amateur equipment such as Drake

and Collins was more than adequate for amateur purposes when used by a skilled operator.

One more point: Frequency synthesizers *did* become popular in amateur *VHF FM* gear in the early-mid 1970s. This was driven by the channelized nature of repeater operation. US manufacturers such as Heath with the HW-2036 produced amateur transceivers with true modern PLL synthesizers.

>> >Ohhhhhhhh--many radio services! They weren't at all common in amateur
>> >radio, Leonard.

For the precise reasons mentioned above.

>> Well, if that's true then it shows that amateurs were indeed Behind
>> The Times insofar as ready-made radios goes... :-)

Not at all. The available 1960s frequency synthesizers simply did not meet amateur requirements.

>Then that wasn't the point, was it?

The claim made by Len was:

"None of that elaborate U.S. subdivision would be possible without the modern frequency synthesizers ...."

which has clearly been proved to be false. Len was wrong, mistaken, in error, out in left field. He won't admit it, of course, but it is a clear fact nonetheless.

>> >> Now if you are going to make a great big federal case out of this
>> >> little thing, then feel free. :-)
>> >
>> >Do you mean if he wants to nit-pick over the fact that you were wrong?

It's not nit-picking. Just plain facts.

>> Who was wrong? Not I.
>
>Yes, you--beyond the shadow of a doubt.

As proved here.

>Radio amateurs were quite
>capable of staying within the sub-bands authorized them prior to the
>period mentioned by you. Deal with it.

Exactly. A 100/50/25 kHz frequency standard could be built with three tubes in the early 1960s. By the late 1960s it could be done with a few ICs. There was no need for synthesizers just to stay in the band.

>> >> You seem to need an argument
>> >> subject and want to go many rounds on this? Not for me. Waste
>> >> of time for me.

Then Len should just admit he was wrong and move on.

>> >> I was in the lab and in the field regarding
>> >> frequency
>> >> synthesizers long ago, know their theory and know both their good
>> >> things and bad things of their internals.

Completely irrelevant to the claim that:

"None of that elaborate U.S. subdivision would be possible without the modern
frequency synthesizers ...."

which has been shown to be false.

A windy Fall Day.
Still have antenna projects.
Can they be finished?

Speaking of talking to yourself, you and zerobeat are the same person,
using the term person loosely.

AKC knows you talk to yourself all the time trying to figure out how
to stop our dissent. You cannot. You are powerless. Sux for you...but
anything about sucking makes you happy, I bet.

>with you in any form.
>

Consider, though, some of Len's threats against others:

2003-10-06

I wrote:

"Most American television and motion pictures are JUNK."

Len replied:

"Feel free to walk around this area shouting your "JUNK!" epithets. If you do,
make sure you have life insurance... :-) "

2002-03-04

At the end of a long post about hams with 1x2 callsigns who homebrew and
support Morse Code testing, Len wrote:

"Some one-by-twos need a two-by-four harshly applied to them..."

2004-06-21

Len's response to a challenge for physical exercise by Steve, K4YZ:

"Let's see...modern fighting tools (since at least 1700s) allow "just a few
ounces of finger pressure" to allow reaching out and touching someone
supersonically. No need for physical confrontation up close and personal."

2004-09-11

Len's response to W4NTI:

"Danny boy, consider that you make a big target. Fills the sight picture very
nicely. Just a few ounces of pressure..... [not talking about radio at all but
then Danny boy wasn't doing that, either]"

Looks like a pattern...

>>>But Mr. Coslo doesn't work that way. I suspect his time on the ice is one
>>>reason. (One trick in hockey is to do something when the ref isn't looking

You misuse the word, "creep."

A creep is someone who insinuates harm will come to someone via
anonymous bricks and knife slashes, or that their loves ones might be
terrorized, unless they behave the way that you wish them to behave.

Great FD story Jim.....here is my first FD story.

I was a brand new General and the local club (W8LKY) in Alliance Ohio had
their annual FD. I too also operated six meters, but with a Clegg 99er. I
loved it when you mentioned the method of tuning in a ssb and or cw station.
I did the same thing at FD and at home.

I have lots of ham radio stories, but as Kim says, this thread is a mess.
We shall see.

Real hams do it on High Frequency, or is that with??? You do know of course that the High Pitch of a female voice will come through a pileup don't ya? In fact that is why all these deep voiced males try to add Heil 5 sound to their SSB signals... hi.

> suitable dividers.

He's clueless. As usual. I could comfortably transmit CW within 200Hz
of any band edge or subband edge with my Collins 75A4 and know I was
"legal". I simply tweaked the 100Khz xtal oscillator to get it dead
on against WWV on several freqs and took it from there. The
out-of-the-box Collins PTO and linear dial with it's adjustable cursor
is a frequency meter and it's far more accurate than any of W2
surplus units. Not to mention being much more convenient to use.

Straight out of the 1950s ham catalogs bub . . all of it.

The A4 served me well into the early 1980s. The 75S-3B and Drake R4B
were just as accurate as the A4. I didn't own or need a synthesized
xcvr "to stay within the bands" until I bought a used Icom 2M mobile
FM rig around 1988.

Dredge up some of the results of the 1950s FMTs to really drive the
point home.

Law of supply and demand. PCTAs demand so you supply the
obsequious-ness; i.e., fawning over their superiority.

On the other hand, pro-coders are getting more scarce every day,
so their price goes up. [also law of supply and demand] They
think they are worth higher than what they originally proclaimed
their price to be!.

Antiques fetch a good price. PCTAs expect all NCTA to "fetch"
for them...

Yes, the only thing that matters to you is being able to
denigrate and pejorate any NCTA that has served the U.S.
military. You weren't "in." You think of all those that were
as "drudges." Tsk.

You make up "stories" in the style of Yell-yell and his "seven
hostile actions." Wave your KMA flag.

Exactly. And those who whine the loudest about K1MAN are
those with absolutely no life. Baxter does nothing illegal, never
has. However, he DOES march to the beat of a different drum,
as many famous Americans have. Baxter inherited lots of money,
which probably accounts for much of the envy sent his way.
Despite his wealth, he chose to earn a four year engineering degree
and go to work in private industry for many years.

No need to be obsequious, Leonard, though I understand your inferiority
complex, long visible here. Fact is, you just aren't in the game.
You're a non-entity to amateur radio and to use of the morse code.
You are to amateur radio what ragweed is to a vegetable garden.

Walter Cronkite thought enough of K1MAN that he did promos and
announcements for the station. If the most trusted man in America
trusts K1MAN, how can anyone else do less? All the rest is sour
grapes. Did Cronkite do W1AW announcements? *NO*

Interesting. Jim says anyone who wanted one could have one.

Kelly says he doesn't know a single waivered ham.

I wonder if there's any middle ground here that comes closer to the truth?

Source record: 97680

I like the sound of that! RVFI.

For a true 'no-code alternative'.

To bring sanity back to Ham radio.

To turn the lid filters back on again.

5 wpm is too slow. "Slow code is no-code"

"No code, no code,
rah rah rah!
dididit dididididit
ditdit-dah"

Somebody tell Len what the above spells out. Not intended to be morse code haiku, but we could start a thread on that too.

5 wpm is trivializing HF. This is not a troll. Think about it. You >know< in your heart I'm right.

Gareeb

>they pulled it off.

Nobody had to say they got one. I've known a few hams who did. All they needed to do was write a letter and get *any* practicing MD or DO to sign it. FCC gave detailed instructions about what info should be in the letter. Basically it could be almost anything medically related.

>> But there was a lot of complaining in some
>> quarters about waivers, so FCC made 'em go away.
>
>Once more the ADA cut both ways.

Nothing to do with ADA at all.

Waivers came about because ol' JY1 asked Papa Bush for a favor and the Prez passed the buck down to FCC. FCC dreamed up the medical waiver thing, not any handicapped-hams group. It became the law in 1990. The 2000 restructuring made

it a moot point.
>
>> >So I expect the

Maybe. Or maybe just the opposite - tinker with the details but leave the basic
frame alone. Look at our license structure now - it's the linear descendant of
the 1951 restructuring.

Here's a tidbit:

Back in the early '70s, there was a rules change that prohibited setting up
until the actual FD period. IOW you weren't supposed to do anything involving
setup until 2 PM Saturday EST. You can guess how well that one went over!

You already know the "aggregate mobile" story.
>
>> >> So the future of ham radio relies on those who are really interested

You know what the bands sound like during a contest. Yet even the big contests like CQWW don't get more than about 50,000 hams on-air at one time, and most of them are listening at any given moment.

So the number of truly active hams is but a fraction of the license totals. Otherwise the bands would sound like a contest all the time.

Exactly. No big deal. I dunno why K4YZ makes such a big deal about it. Nobody is complaining that they worked him but didn't get a card. So what's the beef?

Actually, it is k1man, who started this thread as "mr ham radio". Now, that's a bit of egotistical behavior, isn't it.? True to form, k1man hides behind a visade. Just as the other alias's used in this thread, and all the glad handing he gave himself, glenda, get a clue, we know when, and where, you post. You are so clueless, and your feeble attempts at playing on the internet are laughable. You are a joke. And a joke that will lose his license soon for malicious interference and pecuniary interest. HA!!!HA!!!

Should I reference the latest FCC action against you? Well yes, here it is:

http://www.arrl.org/news/enforcement_logs/2004/0501.html

Let's get into the Walter Cronkite ID. You think it's some sort of validation. You KNOW that you misled Walter for that ID. I have the evidence. Is it time for me to post the letter where Walter Kronkite's lawyers tell you to stop using his voice and image, because you misled them? Bring it on!

There is a lot more to the belgrade bastard, AKA the k1man, story. Next chapter to follow soon. Let's get this creep off the air. See you on 14275.

Chuck...K1KW

PS Hey glenda...I see that you don't have the BALLS to post under your real name...I guess that you aren't a real MAN??? RIGHT??? What's the matter, little Chrissy got you by the short and curly's?

Point is, even those who couldn't afford Drake or Collins could get almost as close to a band or subband edge - using '50s technology.

So Len's claim of needing "modern frequency synthesizers" is utterly bogus. Also his claim that it was "all about staking territory" or some such nonsense. False. Without any facts to back it up.

It's clear that he doesn't really understand what amateur HF operation is/was like at all, nor amateur radio economics, nor even what really happened historically.

He wasn't alone. B&W came out with their 6100 transmitter and it was a flop. The synthesizer feature in it was neat but nobody wanted to pay $700 for one when they could have a Collins or Drake for the same or less.

>Straight out of the 1950s ham catalogs bub . . all of it.

>were just as accurate as the A4. I didn't own or need a synthesized
>xcvr "to stay within the bands" until I bought a used Icom 2M mobile
>FM rig around 1988.

Yup.

And the only reason that thing was synthesized is that it was cheaper than buying lots of xtals.

My 1976 vintage HW-2036 was Heath's synthesizer replacement for the HW-202, which used crystals.

>Dredge up some of the results of the 1950s FMTs to really drive the
>point home.

Back about 1979 I had a BC-348 and BC-221 in good shape. Just for the heck of it I I tried 'em out in the FMT. Error on each band was better than your 200 Hz.

All of it?

So I guess all the hoopla about constructing one's own station to be a
real ham was just a bunch of smoke going up someones hamstring?

Not even a Heathkit in there anywhere?

Sheesh!

I personally know one person who got a waiver (my ex husband) and was
present at a test session as a candidate where another person got a waiver.

People didn't make a big deal of it so it's hard to say how many got them.

It appears that K1KW can't operate a news reader either. Not only do
his posts not thread properly because they are missing a references
header, his posts are identical - probably a canned response that took
him hours to compose.

He is a typical K1MAN critic: Clueless about Usenet and clearly
clueless about K1MAN. Even the United Nations has recognized the
humanitarian work of K1MAN, as have several foreign countries.

K1MAN reflects the very best in amateur radio. We should all be proud
of him.

Actually, he's not ANY kind of operator, except for garage door opener,
microwave, and TV remote.

>> >See how it works?
>>
>> See how WHAT works?
>
>Validation! You might want to get back on your meds and improve your
>attention span.

What validation? Hans spoke his personal opinion.

>> That Hans doesn't like me? Ooooooooh.....I am soooooo hurt.
>
>Nobody -likes you-. You are dislike by some, tolerated by others.
>The only thing you have going for you is your desire to keep code
>exams. If you didn't have that you would be kicked to the curb in
>half a heartbeat.

What "desire to keep the code tests", Brian?

I have already clearly spoke my clear opinion that the time has past and
it's time to move on.

And I am wondering from what certified poll you got the "Nobody like you"
assertion.

If "nobody" inlcudes you, Lennie, Vippy and Hans, I could care less.

>> Hans has proven himself to chastise and demean others about one form
>of
>> conduct and then steps right on out and does it himself.
>
>Gosh, you mean it's not OK to be two-faced? Oh, my!
>
>> You think the opinion of someone who can't march to his own tune is

>years.

You still have yet to prove a single thing, Brian.

>Get back on your meds.

Ibuprofen? Zantac?

You keep insisting that I am "off (my) meds", yet you have yet to sepcify
what meds you insist I am off, and further refuse to present adequate proof of
licensure in any healthcare related discipline that would validate such an
assertion.

>> >> > > and you still publically admire him

>>
>> If it's NOT as you claim...well...then...
>

>The only thing that worries me is that a crazy person is on the loose.
> And he has access to a drug locker. Anything could happen.

But nothing does, Brian. Over 10 years as a Nurse and even more as an EMT
and Paramedic before that, and never one drop of any controlled substance ever
lost on "my watch".

How do you account for that?

>> >> You certainly need the help and
>> >> observation.
>> >
>> >I'm good.
>>
>> No. You're not. You're overtly evasive and mistruthful on a wide
>range
>> of topics. If you did the things you claim then why are you not willing to
>> prove them?
>
>Then let's talk about your seven hostile actions. Spill your guts.

I've already stated that my military record is not germane, and that if
that's all you can "rack up" against me, well more power to you. One point for
Brian.

Of course we can SUBTRACT that one point since you took it upon yourself
to bing private e-mail to the group and violated a promise of privacy.

One point AGAINST me for having thought you ethical enough to trust.

Now let's get back to RADIO issues and find that Somalia authorization and
some proof about those "unlicensed devices in emergency comms" you keep ranting
about.

>> >You're not.
>>
>> Still waiting on your presentation of credentials upon which you base
>that
>> assessment, Brian.
>>
>> >Start "dialing." We'll see who they pick up.
>>
>> Uh huh.
>
>So you didn't call. You lied?

Did you not pay attention to what was written already?

Why are you so concerned if I did or didn't?

If I didn't, no sweat...You can write it off as "newsgroup bravado".

If I did, it will be nothing more than a piece of paper in a file...UNLESS
they get MORE pieces of paper making similar allegations or some charges of

moral turpitude are ever filed against you.

Are you concerned that there MAY be OTHER allegations. Brian?

What have you done or said that gives you reason to take pause?

And why did you not answer my other questions?

Steve, K4YZ

Thanks very much. I sent in my dues for life membership nearly thirty years ago. I hope all of those fellows are enjoying their cars, homes, transceivers and computers.

I'm working on a deal like that myself. I'm trying to get one million usenet readers to send me one dollar each. Would you like to participate?

That all depends on the gossip heard at the captain's table during
dinner (served by "drudges").

Whatever it is, it is 100% absolutely guaranteed TRVTH (engraved in marble) whenever spoken by a PCTA extra. [probably has an Underwriters' tag attached...]

>
>So Len's claim of needing "modern frequency synthesizers" is utterly bogus.
>Also his claim that it was "all about staking territory" or some such
>nonsense.
>False. Without any facts to back it up.

Whatever you say. You can imagine getting within 10 Hz of the
correct frequency with the '50s designs all you want...but that
won't make it happen.

Creative PLL and DDS subsystems of today, designed by others,
make it possible for anyone to select 10 Hz increments on any
HF band (30,000 frequencies within 300 KHz) with crystal-
controlled accuracy.

You just can't do that with a '50s VFO in that time frame. You can,
long, long after the fact, brag about "being able to do so" but it
couldn't be done in second it takes to move a tuning knob...nor
could you as easily do "split" to another, pre-selected frequency
with that VFO. Not even with a garage full of BC-221s. :-)

>It's clear that he doesn't really understand what amateur HF operation is/was
>like at all, nor amateur radio economics, nor even what really happened
>historically.

You should tell more about how you became a ham the moment
you were born into that era. Talk about child prodigies... :-)

It's true I can't understand the fantasy mindset of some hams. I've
perhaps been "held back" by the harsh reality of the real world. :-)

Some real world: 1954, the first visit to Camp Owada in Japan, the
huge radio receiving site for the FEC Hq run jointly by the USA and
USAF. Seeing the "388" and "390" Collins receivers for the first
time...able to tune in within 1 KHz on an analog dial (the 390 series
had a digital indicator but it was mechanical since the tuning was
ALL analog). Remarkable stuff, I admit.

But "synthesized?" No. Far from it. All heterodyning on the analog
level. Not a PLL, not a Fractional-N, not a DDS in any of them.

>He wasn't alone. B&W came out with their 6100 transmitter and it was a flop.
>The synthesizer feature in it was neat but nobody wanted to pay $700 for one
>when they could have a Collins or Drake for the same or less.
>
>>Straight out of the 1950s ham catalogs bub . . all of it.

There are "experts" whose entire experience is leafing through
catalogs. Then there are the few "drudges" (like myself) who've
gotten our hands dirty doing the design and testing of synthesizers.

>>The A4 served me well into the early 1980s. The 75S-3B and Drake R4B
>>were just as accurate as the A4. I didn't own or need a synthesized
>>xcvr "to stay within the bands" until I bought a used Icom 2M mobile
>>FM rig around 1988.
>
>Yup.

What? No "inventiveness" or "innovation" that all right-thinking hams
are supposed to have? Kellie actually bought a ready-made VHF HT
and "went channel?!?!?" :-)

"Real hams" (PCTA extras) shouldn't soil their whatevers going up
above 30 MHz! Tsk. [not even if they wanted to work Frenchmen
out of band on 6]

>And the only reason that thing was synthesized is that it was cheaper than
>buying lots of xtals.

So, you still think that "frequency synthesizers" began with banks of
quartz crystals in oscillators heterodyned to produce many frequencies?

The civilian avionics industry was a step ahead of hams in that regard,
perhaps the first to have light transceivers for small civilian aircraft
using the international VHF civil aviation bands.

>My 1976 vintage HW-2036 was Heath's synthesizer replacement for the HW-202,
>which used crystals.
>
>>Dredge up some of the results of the 1950s FMTs to really drive the
>>point home.
>
>Back about 1979 I had a BC-348 and BC-221 in good shape. Just for the heck of
>it I I tried 'em out in the FMT. Error on each band was better than your 200
>Hz.

Tsk. You should contribute your knowledge and expertise to NIST.
Show them how good you are. Atomic standards are nothing to
one who can tweak a '221. :-)

[talk about "spin resonance" at the molecular level... :-)]

Brian, we have to yank out our obsequious suits and not be nasty
to the PCTA extras. Supposedly.

We must sit in fear of the dreaded knock on the door, the
"authorities" called by someone with professional qualifications
who can instantly, anywhere, simply pick up a phone and have
anyone committed, anytime.

Or, we can all sit in fear of the brick through the window or our
spouses terrorized. All because some emotional retard can't

handle the give and take of newsgroups.

Tsk.

We fear not. Those mighty macho morsemen are bluff and
bluster...always "right" even when they are wrong.

Actually, if one thinks about it, this isn't a bad idea. $1 can be given up by anyone, well, nearly anyway. And, there is certainly a potential for something like this to reach 1 million people.

If 1 million people send a dollar that's--duh--a million bucks to the addressee. Now, we can't all keep sending a dollar out to everyone, but odds are that, if a lot of people send $1 to say, five people, and on down the line, maybe we'd all get to be millionaires before it was over.

So, I'm (for once) with Dave. Send a buck.

That would be interesting. It would have to be after very late in the year of 79. I had just come back from duty in Germany then. I don't remember if I got into contesting again at that time or not. For sure after early 81 tho. Been at it hard ever since.

Got this license while overseas, traded it for a K8 from Ohio when I decided to call Bama home.

I'll see how this thread goes and add some as I can.

Oh BS Leroy. I hardly ever listen to W1AW. I used to listed to
MAN....UNTIL he decided he was God or something. Able to jam at will, sends
out fake felony affidavits, puts out blatent lies, badmouths fellow hams and
Federal Communications Commission personal, runs a BROADCAST TALK RADIO
SHOW, Locks his BS transmitter down for 24 hours a day that send out weeks
and months old information.

Go listen to him right now on 14.275 and hear all you need to know about
Hurricane Francis. While Hurricane Jeanne is trashing Florida. What a
world class idiot you are for supporting this loon.

You've hosed this one up too, Leonard. Anyone who is wrong is wrong.
That isn't to say that the individual is always wrong. If he is wrong
on another occasion, it will no doubt be pointed out.

Foghorn Lenhorn makes statement of fact. All too often his statements
are flat out wrong.

> He Knows... :-)

Often, you don't. :-)

Why Dan, what an oversight on your part, buying a
radio without a tuning knob on it! You know, a light
spin of the dial, and MAN is gone. Instead you buy a
radio with one fixed frequency, 14275.

My concept has nothing to do with a pyramid scheme, Marty. I just want anyone who reads various newsgroups to send me a buck. I'm not sending anything in return. I'm not proposing anything about five people on a list. If only 100,000 people send me a dollar, fine by me. If a mere twenty people send the single clam, I'm still ahead.

Now if the folks at Newington had only come up with this scheme, they wouldn't have to waste all that extra money on the publication of QST, representing U.S. radio amateurs at a WRC, answering telephones and e-mail, transmitting code practice and bulletins via W1AW and maintaining a web site. I wonder if they've used up the entire $275 I sent them for life membership in 1977?

I've got my way to wealth figured out. The rest of you will have to come up with your own plan. ;-)

You may send a buck to the QRZ.com address.

Maybe it is the same model transceiver used by K1MAN. A spin of his own dial and he'd still be gone. Baxter is unbalanced.

Said by the guy who can't spell "know nothing." Oh, the irony.

> Cronkite has tried to get him to drop those announcements for years. Glenn

That makes no difference to the original point, which was that Walter
Cronkite recorded some promos for K1MAN. If Walter thought enough of
K1MAN to make those promos in the first place, then K1MAN was held in
high regard by Cronkite.

> has been contacted by Mr. Cronkite's attorney. I notice he doesn't have
> them on there any more. Wonder why?

1) The promos are out of date; 2) Cronkite wanted money, and 3) Bill
O'Reilly of Fox News has just recorded some new spots which may used
on K1MAN some time next year if O'Reilly can get FOX's permission. It
was all announced quite clearly on the web site.

As I said, K1MAN is a philanthropic citizen of the world whose
accomplishments are recognized by many famous people outside of ham
radio.

K1MAN is a giant.

>are flat out wrong.

We've seen Len behave like this many times before, Dave. He simply cannot
tolerate having his mistakes and errors pointed out by someone he considers
inferior - such as me.

It's a plain, simple fact that we got code waivers because JY1 (better known as
King Hussein of Jordan) asked then-president George Bush to do something about
US code test requirements for hams. GB1 told FCC to do something, and we got
medical waivers.

It wasn't because of ADA, or Handi-Hams, or anything like that.

For some reason, Len doesn't like having that sort of thing pointed out.

He's probably also ticked about being proved wrong on his "subdivision was only
possible because of modern frequency synthesizer" statement. Apparently, Len
cannot conceive of the concept of being allowed to operate anywhere within a
given band of frequencies, and of not having to know one's exact QRG within a
few Hz - only that one's transmitted signal is inside the band.

Back about 1961, there was an article by W1ICP in QST showing how to build a
100/50 kHz frequency standard. 6AU6 oscillator, 12AU7 multivibrator (which
today we'd call a flipflop). It was a "Beginner and Novice" article....

All a ham needed was something like that to know where the band and subband
edges were.

But Len just doesn't get it.

When did the FCC change their rules?

97.101b - No frequency will be assigned for the exclusive use of any
station.

97.113a - No amateur station shall transmit any communication the purpose
of which is to facilitate the business or commercial affairs of any party.

97.113e - No station shall retransmit programs or signals emanating from
any type of radio station other than an amateur station.

97.313b - No station may transmit with a transmitter power exceeding 1.5 KW
PEP. (Ref: KE8SP, Tex Martin)

It is an upside down world in which a ham, posting in an amateur radio
newsgroup is considered inferior by a non-ham who hangs out here for
reasons known only to himself.

> It's a plain, simple fact that we got code waivers because JY1 (better known as

Leonard isn't about to allow facts to stand in his way.

> For some reason, Len doesn't like having that sort of thing pointed out.

I'd say the reason is that he looks foolish when he attempts to
pontificate on something he knows little about.

> He's probably also ticked about being proved wrong on his "subdivision was only
> possible because of modern frequency synthesizer" statement. Apparently, Len
> cannot conceive of the concept of being allowed to operate anywhere within a

Len is accustomed to using spot frequency channels. The way most
amateur radio operation takes place is outside his field of reference.

> Back about 1961, there was an article by W1ICP in QST showing how to build a
> 100/50 kHz frequency standard. 6AU6 oscillator, 12AU7 multivibrator (which

> But Len just doesn't get it.

...because it places the situation outside his "Frequency synthesizers
began appearing in many radio services...." pontification. His status
(the one he doesn't need or want) as expert is invalidated.

Did I say you, specifically, were "inferior?" :-)

You are a PCTA extra. That makes you different than normal people.

Can't compare the PCTA extras with ordinary normal people. :-)

>It's a plain, simple fact that we got code waivers because JY1 (better known
as
>King Hussein of Jordan) asked then-president George Bush to do something about

>For some reason, Len doesn't like having that sort of thing pointed out.

Was I discussing (the late) King Hussein? I don't think so.

The URBAN MYTH that the code test waivers came about is still
not verified by any documentation. That makes it hearsay.

To challenge that urban myth it is not hearsay but heresy. :-)

Show us the documentation that the King of Jordan did all that
you say. Knock yourself out on that one.

Remember, hearsay doesn't hold any water...better get a leak-
proof receptacle.

>Back about 1961, there was an article by W1ICP in QST showing how to build a
>100/50 kHz frequency standard. 6AU6 oscillator, 12AU7 multivibrator (which
>today we'd call a flipflop). It was a "Beginner and Novice" article....

Wow! How about that!

In 1949 I put a 100 KHz controlled 6AU6 (pentode) inside my National
NC-57 receiver. Suggestion of (then) W9ERU (later W7DI but now SK),
Gene Hubbel. No "articles" on how to do it but the James Knights
crystal box had a little suggested-circuit sketch. :-)

No mumblyvibrator needed, harmonics good enough to set the
main tuning dial to use the bandspread.

Gene Hubbel's original suggestion was to use a 2.5 mHy RFC with
a 1000 pFd capacitor (approximate...part of it being a trimmer). Then
he advised me on how the National could be tapped into for power to
the calibrator.

>All a ham needed was something like that to know where the band and subband
>edges were.

Riiiiight. Like that is SO good to find those new "channels" hams got
in the USA. A nice harmonic-rich "calibrator." :-)

>But Len just doesn't get it.

I've "gotten" mine, Jimmie. :-)

Long, long time ago. Back in high school. :-)

So...is it too early to ask about your fellowship position at NIST?

We are all waiting to hear how you've impressed the scientists...

Tsk, tsk. Brian is correct. The term "bald faced" is used to denote someone is out-and-out, direct, not hiding anything.

"Boldface" applies to type font, "heavier" or denser than the original typeface.

So far, you've been hiding the Where and When of those famous "seven hostile actions" you claim you were in while in the military.

Tsk, tsk. A bald-faced LIE. :-)

> Radio.

Since you asked: $300 over the course of 5 years, only for "news" services,
and NONE of it to "AR Newsline." All of it went to Community Video Associates
which produces "This Week in Amateur Radio." One of the checks involved was
reviewed by the IRS during an audit and found to be a valid contribution under
26 USC 170. The remaining amounts were contributed in years not audited by the
IRS.

I have a problem with calling his scholarship expenses "a cost of bringing the news to the amateur community." It clearly isn't.

Proof: He posts his drivel here (in FULL) weekly yet does not participate in
this newsgroup whatsoever. Doesn't that remind you of someone. It certainly
does for me: A SPAMMER. I don't have to prove it; he proves it for us every
week by his actions.

> Nothing but your opinion and some guesses as to what YOU think is
> "fair" in the operational costs of A.R.N.
>

>
> THAT is "moronic".

If that's what you think, you completely missed the point (again). To repeatedly misclassify an expense as something else is accounting fraud, plain and simple. It doesn't matter that one is "hiding" one worthy cause in another; it is wrong regardless.

> > My reasonable basis has been that his expenses, as AR Newsline and he describe

Just because I am smart enough to discover that there is a descrepency and you're not doesn't mean that I am incorrect. I never said affirmatively that I was correct - I'll grant you that. I only said that there appears to be an

unexplained problem, and I, as a member of the public, have a right (and perhaps even a responsibility) to seek the truth when a tax-advantaged charity is involved.

> I SAY that you are whining.
>
> It's not up to me to "justify" any argument.

> with the way Bill operates "Amateur Radio Newsline".

Yes, there is. AR Newsline's own, recent statement makes that clear. They have classified ALL their expenses as "news gathering" when the scholarship portion isn't. It doesn't cost them "$1k/month to bring [us] the news." It may, when averaged, cost $1k/month for ALL their activities, but that's not what they have historically said. Their statement is wrong, they KNOW it, and they make it for the purpose of soliciting further contributions, thus demonstrating INTENT.

>Complex (DMC).

Obviously the compulsion to resort to your own diminutive,
non-topic oriented attacks was too strong, Brian.

And you did, just as I said you did, follow Lennie's lead to the hilt.

Which brings us back full circle. You have, through your own words and deeds, proven yourself to be neither trustworthy nor responsible.

You insinuated that I am the progentiator of such newsgroup triffling, however you and Lennie disproved that without any assistance from me.

You really are your own worst enemy, Brian. You've proven me right again in that you are not a person of redeeming character or trust.

When will you ever learn?

Steve, K4YZ

Len has stated that his mission is to eliminate the Morse Code test. Yet he
goes off on all kinds of subjects that have nothing to do with the Morse Code
test.

>> It's a plain, simple fact that we got code waivers because JY1 (better

>
>Leonard isn't about to allow facts to stand in his way.

Of course not. Never mind that the above facts came from someone who worked for FCC and who explained the whole process.

Len never worked for FCC.

>> For some reason, Len doesn't like having that sort of thing pointed out.
>
>I'd say the reason is that he looks foolish when he attempts to
>pontificate on something he knows little about.

Perhaps. Or perhaps he is very threatened and afraid of being shown to be wrong about something, because if he admits a mistake in one area, he might also be mistaken in another area.

Even worse, Len might have to deal with the idea that different people have different opinions, and that others are not wrong or inferior because they disagree with him.

For example, it is my opinion that Morse Code testing for an amateur radio license should continue and be expanded. It is Len's opinion that Morse Code testing for an amateur radio license should be competely discontinued.

Both opinions have supporting arguments behind them. Ultimately, though, it all comes down to which arguments are considered most significant - which is just another way of defining an opinion.
>

>
>Len is accustomed to using spot frequency channels. The way most
>amateur radio operation takes place is outside his field of reference.

Exactly. It appears that he wants/needs for Amateur Radio to conform to those radio services he has some experience in, such as citizens band and GMRS/FRS.

The *freedom* with which hams operate is obviously very threatening to Len.

Note also that the subject under discussion was the ability of hams to stay within their bands and subbands, not the ability to dial up a specific QRG. Yet Len tries to push the discussion away from the subject.
>

subband
>> edges were.
>
>> But Len just doesn't get it.

In 1961, when that article was written, all US amateur HF bands and subbands were on multiples of 100 or 50 kHz. (160 is MF not HF). Thus, the need for a divider. When incentive licensing was enacted, some subband edges were on multiples of 25 kHz, requiring another multivibrator. But by that time, IC dividers were common enough that a simple 100/50/25 kHz standard could be made from a couple of ICs.

No synthesizer needed at all.

>...because it places the situation outside his "Frequency synthesizers
>began appearing in many radio services...." pontification. His status
>(the one he doesn't need or want) as expert is invalidated.

I'm sure there are areas of knowledge where Len is an expert. Amateur radio is not one of them.

Congratulations, Dieter.

It only took you 2 weeks to come up with that answer.

And I bet you that for every "valid" deduction YOU produce to "TWIAR", 10 other people have had similar checks to ARN that were also determined to be valid contributions. Bill's been doing this now for as long as I can remember, and never once has his "status" been questioned that I am aware of.

Yes, I do.

And so far you've NOT provided this conversation with ONE BIT of data that even remotely validates your assertions of it vis-a-vis Amateur Radio Newsline or Bill Pasternak.

Just a lot of speculation and whining.

I reiterate my expectation that when and if you do file your "complaint" that at some time thereafter you will be laughed right out of the DA's office.

>>However, perhaps the local District Attorney

Like I said, Dieter...Go right ahead and file your complaint.

I will be the first one to send Bill Pasternak money to defend against your allegations, and I will be the first one to send him money to file a countersuit.

I will also lend my assistance in helping him with establishing your years of mindless allegations and bully-like "come out and fight" rantings in this forum.

Now...I say that there will never be a single criminal charge levied against BP...And even if there are, he will be exonerated.

Furthermore, considering your YEARS of taunts and threats in THIS forum, I say HE has a better than average chance of receivng damages from you after the charges, if drawn, are cleared and he proceeds against YOU in civil court.

And I will be more than happy to help him acquire copies of every threat, taunt and allegation you've made in this forum and turn them over to his legal counsel for just that purpose.

Have a nice day.

Steve, K4YZ

Hey, it's better than the egg you'll be wearing if you do try to follow
through on these assinine allegations of yours.

>> You've been trying to beat up Bill Pasternak in this forum for

NOT "proof".

ARN's posts provide a realtively timely and subject-focused insight as to
activities going on in the Amateur Radio community.

No one said that anything posted here had to be a two-way medium.

ARN's posts contain material that is realtive to Amateur Radio on several
levels, INCLUDING Amateur Radio policy.

All his posts have to do is mention just one passage about any regulatory
or legal proceeding ABOUT Amateur Radio, and his "release" is germane to the
forum.

>> Nothing but your opinion and some guesses as to what YOU think is
>> "fair" in the operational costs of A.R.N.
>>
>> If you can do better with less, then do it.
>
>All his "competitors" do - about 90% less.

OK...so YOU go ahead and get the books from ALL the other "competitors",
then post a side-by-side comparison as to content, timeliness, accessibility
and content and PROVE me wrong.

YOU are claiming these other resources do it for less...Prove it. Show us
the books...Not just "Dieter Stussy says so..."

>> As for moronic, I refer you back to your other post this same day
>> about approaching the District Attorney because A.R.N., a charitable

>another; it is wrong regardless.

I've missed nothing.

YOU have made a claim of fraud.

Personally, I'm getting tired of hearing it, especially since you've NOT
provided ONE IOTA of PROOF.

PROOF is Bill's books, audited by a reputable CPA or court officer, and
then published for public review.

PROOF is NOT Dieter Stussy saying it's so.

>> YOU are the one suggesting there is a problem, Dieter, not me.

>I
>was correct - I'll grant you that.

You'd have to. So far you've done nothing but whine and accuse.

And so far you've "discovered" NOTHING. You have a very biased opinion as
to why you THINK there's a problem, and that's only due to your dislike for one
of the persons who runs the program you are alledging to be commiting fraud.

>I only said that there appears to be an
>unexplained problem, and I, as a member of the public, have a right (and

>and
>they make it for the purpose of soliciting further contributions, thus
>demonstrating INTENT.

Still nothing there, Dieter.

The IRS ain't complaining. The FCC ain't complaining. And in better than
20 years of listening to ARN, YOU are the ONLY person I have EVER heard
complain about it.

>> Until you've provided something OTHER than your "guesstimated"

> And the only reason that thing was synthesized is that it was cheaper than
> buying lots of xtals.

Nah, not today or in 1988 for that matter, there's a bunch more valid
reasons for using current-tech synthesized VHF/UHF FM rigs than just
getting rid of the old xtal packs. It's all in the plethora of tricks
2M mobile rigs do today which go far beyond just their "synthetic"
frequency generation circuitry.

Size per watt, (my FT-1500M cranks 50W out of a package about the size
of a couple packs of smokes), computer control, both internally and
computer programmable, memories, the availability of all the PL & DTMF
tones, odd splits, band scanning, wideband receivers, digital
displays, etc.

The '70s boat anchor 2M rigs like the Heath 2036 certainly did get rid
of the xtal packs which was their Big Thing but that's about all they
did vs. the xtal controlled rigs of the 1960s.

>

> it I I tried 'em out in the FMT. Error on each band was better than your 200
> Hz.

I'm not talking abt using my boat anchors in FMTs. I sed "I could
comfortably transmit CW within 200Hz or subband edge with my Collins
75A4" and know I was legal. As in being able to quickly swish within
200 hz of a band edge in the heat of a contest pileup and know I
wasn't out of band. That's a whole different ballgame from taking the
time to carefully diddle a bunch of knobs in a FMT. The proper
comparison in your context would be between the BC-348 without the
BC-221 and the A4 under real operating condx. Or get into a FMT with
the 75S-3B vs. the BC-348/BC-221.

How about another story, then?

Back in the early 1970s I was active in the section and region NTS nets. CW of course! We handled all sorts of traffic in all sorts of conditions. Even my modest homebrew setup was effective on 80 meters EPA and 3RN. Being a regular scheduled NCS and region rep for EPA while still in high school is an experience I'm gald I didn't miss.

Now of course in such net operations one becomes very familiar with the other regulars - to the point that all you need is to hear a few letters of their signal to know who it is. Net members helped each other in various ways, such as locating inexpensive parts, antenna parties, etc.

One year I was looking for something different to do on FD, so I asked around if anybody needed operators. Two hams who weren't that far away offered to let me join their group. Turned out they were into QRP CW, back when such operations usually meant homebrew, because the manufacturers hadn't caught up yet.

So I wound up on the banks of the Schuylkill with "The Schuylkill River Rats". The four of us put up a simple parallel dipole between two trees, set up a surplus tent, table and chairs, and ran a pair of cables over to the battery in someone's car. Hooked up the rig and we were ready to go.

Now the rig we used was something unique. It was homebrew, of course, covering 80 and 40 meters. It was a transceiver, with all solid state devices except for the driver (12AU6) and final (1625) tubes. With a small external power supply for high voltage, it could run as low as 5 watts for the QRP class or as high as 75 watts for home use. We ran QRP, of course.

The receiver part was direct-conversion, with a phasing-type system to eliminate the unwanted sideband. It worked pretty well, particularly since it only had to deal with a relatively small audio range, since CW needed only a small audio pass band.

It was built in the chassis of an old early-1930s-vintage National FB-7 receiver, using only the case, tuning capacitor and dial. That FB-7 would be worth a lot more today in its original condition, but back then "old stuff" was all over the place for rock-bottom prices.

We made quite a few QSOs with that setup. IIRC something like 330 QSOs with just 80/40 QRP CW and the dipole. I learned a lot about rig design, QRP operating and Field Daying with a small group.

When it was done, taking the setup down was a breeze - we were on our way home in an hour. I was skeptical about whether the engine in the battery-supply-car would start, but it turned over and caught first time. Maybe cars had bigger batteries then, or perhaps it was the old Dodge Slant 6...

In any event, that started my interest in serious QRP and small-group FDing.

(fast forward more than three decades)

A few months ago, a local ham gave me a pile of stuff he just wanted to be rid of. Among the pile were a bunch of old copies of the magazine "ham radio" (they didn't use capitals - trying to emulate e.e.cummings or k.d.lang or some such). They were all early issues, from 1968 to about 1975. I'd never been a subscriber but I had read a few of them, back in the day.

Once they were properly stored, I pulled out a copy at random to read - July, 1969. Flipped through it and suddenly got chills - there, on page 14, was the FD rig we'd used so long ago! Article was by the leader of our group, Cliff, W3NNL, who had designed and built it. Boy, did that bring back memories!

What?? Where, exactly, has anybody claimed 10Hz frequency resolution
with '50s analog radios?

> Creative PLL and DDS subsystems of today, designed by others,
> make it possible for anyone to select 10 Hz increments on any
> HF band (30,000 frequencies within 300 KHz) with crystal-
> controlled accuracy.

Analog VFOs are continuously variable. Making it possible for anyone
to select an *infinite* number of "increments" within a 300Hz
bandwidth much less your coarse 300 Khz wide example. And they do it
without generating any phase noise or other forms of crud synthesizers
toss out.

> But "synthesized?" No. Far from it. All heterodyning on the analog

> There are "experts" whose entire experience is leafing through
> catalogs.

My FT-847, which is not much as ham xcvrs go, can be tuned in 1 Hz
increments vs. the "make it possible for anyone to select 10 Hz
increments" thingey you cite above. You obviously need to spend
considerable time leafing thru the ham catalogs to get up to speed on
the equipment we use before you spout off and continue to goose up
your "coefficient of ignornace" on the subject of ham radio in general
and the equipment we use. Again. Gets boring.

> Then there are the few "drudges" (like myself) who've
> gotten our hands dirty doing the design and testing of synthesizers.

Then there are drudges like me who have ham licenses and and put
technoligies to work on the airwaves whilst all you're allowed to do
is bafflegab about 'em with your keyboard.

Steve, you have entered phase two of your training program. You will
be called names, yet you must remain civil. So far, so good.

Such a paradox.

He's not ANY kind of operator, then there is a list of things he operates.

Logic is not your strong point.

> OBVIOUSLY!

Agreed.

Quick topic switch:

After 1929 and before 1951, there were *no* subbands-by-license-class
in US amateur radio. There *were* mode limitations, of course.

Until 1968, the only subbands-by-license-class in US amateur radio
were the "Novice bands" and the limits on Techs and Novices on 2
meters. (Techs had only 145-147 for quite a while).

The subbands-by-license-class thing was suggested by numerous (a least
6, but not the ARRL) petitioners in 1964, who saw it as a better

alternative than simply closing off certain bands to Generals and
Conditionals. FCC liked the idea so much it became part of their 1965
incentive licensing plan. Which plan was argued for another year or
two and then became the final 1967-68-69 changes.

Agree 100%.

> The '70s boat anchor 2M rigs like the Heath 2036 certainly did get rid
> of the xtal packs which was their Big Thing but that's about all they
> did vs. the xtal controlled rigs of the 1960s.

That was enough. The cost of xtals in those days was enough that once
you got beyond a coupla pairs it was cheaper to get a '2036 or other
synth rig.

Fun fact: The HW-2036 was PLL synthesized. The popular Clegg FM-27B
was heterodyne synthesized. The Clegg's system was crystal intensive,
of course, but electrically quite simple by comparison, and since the
xtal price was part of the rig price you paid up front and were done.

Plus with synthesized VHF/UHF you didn't have to worry about running
out of sockets in the rig when new repeaters got on the air. Or
traveling to an area where different freqs were in use. Or finding an
open simplex spot, being able to listen on the input or transmit on
the output, or a dozen other tricks. Etc.

Point is, the move to frequency synthesis in mainstream ham radio was
driven by VHF FM repeaters and economics. Not by other services and
certainly not by incentive licensing and subbands-by-license class.

> > >Dredge up some of the results of the 1950s FMTs to really drive the

>
> I'm not talking abt using my boat anchors in FMTs.

Nor I. The example was just to show what could be done with '40s
technology that was available cheap in the '60s and later.

> I sed "I could
> comfortably transmit CW within 200Hz or subband edge with my Collins
> 75A4" and know I was legal.

bwaahaahaaa

> wasn't out of band.

Yup.

> That's a whole different ballgame from taking the
> time to carefully diddle a bunch of knobs in a FMT.

Of course.

> The proper
> comparison in your context would be between the BC-348 without the
> BC-221 and the A4 under real operating condx.

HAW! The unaided 348 might be good for 5 kHz on 80 meters on a good
day, warmed up and recently calibrated. I don't want to think about 20
meters...

> Or get into a FMT with
> the 75S-3B vs. the BC-348/BC-221.

The BC-348/BC-221 would win, unless the S3 had some help beyond its
internal calibrator. That's assuming a good '221 and an op who knows
how to use it. The '348's accuracy isn't part of the equation in an
FMT setup; it's all on the '221. (I prefer the LM - sold my BC-221
years ago. Must be the Navy vintage or something.) After all, the S3
is a receiver, not a freqmeter.

But that's not the issue.

The main point is simply that hams *did not* need
frequency-synthesized rigs to stay within their bands and subbands
back in 1968 - or 1978, or 1988, or 1998.

Or even in 2004.

Another of Len's claims revealed as being unsupported by fact.

Now before somebody gets all excited about 60 meters...

1) It's not a band - it's 5 spot frequencies

2) It wasn't available to hams back in the '60s, or even the '90s.

3) (The biggie) The digital readouts on modern ham rigs are not as useful as some might think in setting to 60 meter channels because different frequency description systems are used. Ham SSB gear universally reads out the suppressed-carrier frequency - been that way since A4 days. But the channels are specified by their *center* frequency, not suppressed carrier, so you have to mentally add an offset to the indicated frequency on a ham rig to be on-channel on 60 meters. How much of an offset? About 1400 Hz - give or take.

Len, I think the training is working. He hasn't used that Yiddish word for penis for some time. Right now I've got him working on some low-level insults; I insult him, he tries to act grown-up about it. At least that's the plan. By the end of his training, we should have a fully functioning net citizen amongst us. I believe he'll even get around to apologizing to us and admitting he was wrong about so many things. Please, wish him luck.

Nobody has, it's just a diversion away from the original nonsense about hams needing rigs with synthesizers.

>
>> Creative PLL and DDS subsystems of today, designed by others,
>> make it possible for anyone to select 10 Hz increments on any
>> HF band (30,000 frequencies within 300 KHz) with crystal-
>> controlled accuracy.

Irrelevant to 99% of amateur HF operations. With a very few special exceptions (like 60m) we're not required by law to be on any specific freq on HF. We *are* required, and have long been required, to be within the band or subband. Len can't seem to grasp that concept.

In fact, in almost all HF ham operations, good operators decide their QRG based on non-interference, not any specific channel or spot frequency.

>
>Analog VFOs are continuously variable. Making it possible for anyone

As you will say later, those "analog" radios have INFINITE resolution. :-)

>> Creative PLL and DDS subsystems of today, designed by others,
>> make it possible for anyone to select 10 Hz increments on any
>> HF band (30,000 frequencies within 300 KHz) with crystal-
>> controlled accuracy.
>
>Analog VFOs are continuously variable. Making it possible for anyone

>bandwidth much less your coarse 300 Khz wide example.

Heh heh heh...your bafflegab won't win blind man's bluff, Kellie,
deal yourself a better hand... :-)

Feel free to try to state you can return to that "infinite possible"
setting within a few PPM...all without any old crystal calibrator and
dependent on that "coarse" analog dial. :-)

>And they do it
>without generating any phase noise or other forms of crud synthesizers
>toss out.

Kellie, define "phase noise" insofar as amateur radio operation is
concerned. You, for the limits of your technical knowledge, should
call that "incidental FM" which is what the industry term "phase
noise" refers. :-)

Then you should examine exactly how low that terrible phase noise is. You can use the term "dbc" referring to the number of decibels below the "carrier" (center frequency reference, not a modulated carrier per se). The "crud" (as you term it) is quite far down in relative power and certainly won't affect morse code reception of an on-off keyed station's carrier.

"Phase noise" is a somewhat new buzzword in industry due to the importance of keeping it low for QAM signals (Quadrature [phase] Amplitude Modulation, a combination of PM and AM). The cell phone engineers will know of that importance on keeping the BER (Bit Error Rate) as low as possible. The amount of work in the last decade on cellular telephony techniques has been enormous worldwide. It's only natural that industry advertisements, from sub-system components to full systems, emphasize a low "phase noise."

As far as on-off keyed radiotelegraphy, your mention of "phase noise" as being "crud" in synthesizer frequency control is akin to making a big case for gold-plated music system speaker wires. :-)

It is ignorance to discount the possibility of "crud" being non-existant in analog mixing frequency generators. Those analog "infinitely-variable" oscillators are just as prone as anything to "phase noise." The wrong selection of mixing frequencies will produce spurious responses...one of the papers I wrote at RCA was on quick identification of such possible spurs (not the first, but it was a very quick way to determine them).

>My FT-847, which is not much as ham xcvrs go, can be tuned in 1 Hz
>increments vs. the "make it possible for anyone to select 10 Hz
>increments" thingey you cite above.

10 Hz increments is common in installed equipment (including the ham consumer market) in the past two decades. I know there are smaller increments...:-)...but I also have to play to the common denominator of technical expertise in here.

10 Hz increments are perfectly fine for SSB voice tuning, as I've found out with my Icom R-70. If I need to get closer than that (don't know why I should), the RIT will handle those "infinite frequency" things. :-)

When I bought my R-70 (years ago), the three extras at work in the Van Nuys, CA, store didn't know squat how Icom was able to do it with 10 KHz reference frequencies to the PFDs (factor of 1000:1) there. Turns out Icom has a neat 3-loop PLL arrangment, doesn't go into DDS or Fractional-N at all. Minimal phase noise and no discernable "crud" anywhere within full tuning range.

Okay, so your spiffy-schmiffy 1 Hz resolution "xcver" is "guarnateed" accurate because it has a "digital dial?" I don't think so. Exact 1 Hz settings imply 100 PPB (Parts Per Billion) accuracy of the master reference oscillator. You will NOT be able to hold such accuracy and be believable to anyone who has worked to such accuracies in

crystal oscillators. Certainly not for the ham consumer market.

Fella named John R. Vig (unusual surname) is a good name to
remember on what can be done and can't be done with crystal
oscillators. Big name in the frequency control part of electronics
industry, probably not in the pages of QST. :-)

>You obviously need to spend
>considerable time leafing thru the ham catalogs to get up to speed on
>the equipment we use before you spout off and continue to goose up
>your "coefficient of ignornace" on the subject of ham radio in general
>and the equipment we use. Again. Gets boring.

True. I never bothered to memorize advertisements in QST by
heart...like so many PCTA extras do. :-)

I rather prefer what I've been exposed to since 1963 on frequency
control methods...beginning with those "cruddy" synthesizers
(without "real" frequencies, only the "synthetic" variety)...and
quartz crystal oscillator accuracy and stability to the 10 PPB
region.

Common ham radio quartz crystals have guaranteed accuracies
to 50 PPM typical. That translates to 500 Hz at 10 MHz, by way
of example. 1 Hz accuracy at 10 MHz is 100 PPB, or 500 times
closer.

>> Then there are the few "drudges" (like myself) who've
>> gotten our hands dirty doing the design and testing of synthesizers.
>
>Then there are drudges like me who have ham licenses and and put
>technoligies to work on the airwaves whilst all you're allowed to do
>is bafflegab about 'em with your keyboard.

I'm sorry that my technical competence seems like "bafflegab"
to you. Some further learning of the radio technical arts would
erase some of your ignorance and lend credence to what I've
said. Like, I could ask you "how's the zeta of your control loop"
and you would be out to lunch, cussing and hollering "bafflegab!"
"Zeta" is the symbol for the response characteristic in a closed
loop of a PLL, Fractional-N, or hybrid PLL-DDS system. An
important factor for lock-in and stability and anyone designing
the loop filter for a synthesizer should recognize that common
term.

I've never dined in the executive dining room (the counterpart to
your "captain's table" BS) in any electronic corporation but I
HAVE designed and made frequency synthesizers. Hands-on
work all the way, from the initial paper work-up to long hours
in the environmental lab...to accuracies in 100 PPB over
full military environment. Interesting, challenging work!

USING modern equipment is NOT involving development or anything else. Try not to run off at the mouth/keyboard so hastily. Try not to nit-pick like nits over minor phrases in postings so that you have an "excuse" to cuss and snarl at NCTAs. It makes you look like nursie's cousin. :-)

Uh huh.

What you have done is yet again perpetrated a public lie and are now trying to weasle out from under it.

You're still a liar, Brian, and you have zero-point-squat credibility in anything relating to Amateur Radio.

As Hans would say..."Good luck with this one now..."

Brian, all you could "teach" me is how to lie, deceive, mislead and dodge.

You remain a known liar. You remain recalcitrant in efforts to validate assertions you have made in public and you have yet again perpetrated an effort to do other than what you claimed you would do.

Nice try. You're still a liar.

I guess you missed the word "except".

There's no paradox. Excpet the part where YOU claim to be such a superior
operator, yet can't seem to get a signal up on HF...Phone or otherwise.

Were you born a pathological liar, Brian, or was it a learend trait?

That could be true. Nursie is a post-doctorial canditate on those
things, many certificates...

> You remain a known liar.

It's not "pathological" anymore? Tsk.

>You remain recalcitrant in efforts to validate
>assertions you have made in public and you have yet again perpetrated an
>effort to do other than what you claimed you would do.

Tsk, tsk! Nursie assumed the producer-director role of his nursieworld
epics...makes loaded questions, answers them himself...all to "prove"
others are liars.

> Nice try. You're still a liar.

Tsk. Everybody opposing nursie is a "liar."

"Liar, liar, pants on fiar!" :-)

Tsk. Just when the new training had some hopes of starting off with positive results.

I do hope you get your pathologist license back soon...

LenAnderson@ieee.org

Hmmm...sort of like those mythical "seven hostile actions!" :-)

No details on the Where or When of them...

Or the part where ham radio "IS" MARS...even though the
Department of Defense defines and directs it.

> You're still a liar, Brian, and you have zero-point-squat credibility in
>anything relating to Amateur Radio.

Tsk. Absolutely nothing? :-)

Wow. Draconian life in Nursieworld!

> As Hans would say..."Good luck with this one now..."

Tsk. Hypocrital are you? One time you say Hans is a @#$%!!! and
now you paraphrase him?

As Brutus might say, "We come not to paraphrase him, but to
bury him." [Shakespeare didn't write that, a shaky spear in
scrubs did...]

So...when are you getting your pathologist license back?

Once again, you've demonstrated that you know very little about problems with much of the amateur radio equipment produced within the past couple of decades. Noticeable phase noise appears not only in the receiver output section of many transceivers but in the transmitted signals as well. 1980's top of the line Kenwood TS-930's were rife with the phase noise products and synthesizer spurs. A quick spin of the main tuning dial with no antenna connected would result in a rapid p-t-t-t-t-t-t-t-t sound from such spurs. R.L. Drake's TR-7 had much less phase noise. Rigs such as Ten-Tec's Omni VI series, using a crystal mixed front end had almost no measureable phase noise.

The folks in Newington whom you frequently enjoy insulting might put you on the road to being informed:

http://www.arrl.org/files/infoserv/tech/bestrig.txt

under "Q. What do you mean by receiver 'cleanliness'"?

You may continue your education by looking at the following pdf file under section 1.2.2:

http://www.qth.com/inrad/managing-interference-ch1.pdf

One of the Polish fellows has published some excellent information. The phase noise issue is touched upon in the last few paragraphs:

http://www.gmdx.org.uk/dxtest/qx9racze.pdf

> I rather prefer what I've been exposed to since 1963 on frequency

Sure, but those old VFOs tended to change the frequency a little
over time. AKA "drift". Me thinks one desires to select a frequency
and then have the rig stay put on it. Modern rigs can do that
to the accuracy and drift of a good crystal oscillator to some
set resolution. But for our uses, 10Hz resolution is more than
sufficient.

Early 2 meter synthesized rigs had some trouble with this (the
phase noise would "add" to the FM modulation and produce extra
noise. Phase modulation and frequency modulation are closely
related, one is the integral (as in calculus) of the other.

As for HF CW, some poorly designed novice xtal oscillator
circuits probably had it worse than a modern synthesized rig.
And then there's chirp...

>over time. AKA "drift".

Of course. That problem was insignificant in good-quality amateur gear by the
mid-late 1950s. Curing it was mostly a matter of getting away from bandswitched
self-controlled oscillators.

Most amateur HF operation does not require excellent long-term frequency
stability.

>Me thinks one desires to select a frequency
>and then have the rig stay put on it. Modern rigs can do that

Exactly! But the designers have gone one better and commonly offer 1 Hz
resolution.

However, the original point was that such frequency synthesizers were somehow
"necessary" for hams. That is simply untrue.

>>>And they do it
>>>without generating any phase noise or other forms of crud synthesizers

The above reflects ignorance of the HF receiving environment commonly
encountered by hams, particularly those in DX, contest, and other competitive
situations.

>Early 2 meter synthesized rigs had some trouble with this (the

Devil's Advocate mode = ON

But why are the Element 4 questions needed at all? For that matter, why are
most of the Element 3 questions needed (See below)

>>>Also, I don't think subband restrictions by
>>>licence class make any sense whatsoever, as the propagation is the same
>>>for the whole band.
>>

>competency. The appropriate level of competency for access to a different
>part of the same band at the same power level is, um, let me see - the
>same. Big surprise, huh?

By that logic, (insuring competency) there is no reason for any of the Element
4 questions at all, because a General has all of the bands, modes and power
levels of Extras.

So *if* we accept the idea that the only reason for license testing is to
insure competency, and that the General test insures competency for the bands
and modes allocated to it, then there's no reason for the Extra at all.

In fact, we can go a step farther. The Technician allows full power on all authorized modes and bands above 30 MHz. Therefore, if the reason for testing beyond the Tech is to insure HF competency, then the only questions that should be on the General are those specific to HF competency.

Devil's Advocate mode = OFF

The problem with the above argument is that there are reasons for license testing beyond simply insuring competency.

>>>Ideally, I would give an entry level licence very restricted power on
>>>the whole extent of a limited number of bands in different parts of the

>Your transition plan is messy, and unlikely to appeal to the FCC as it
>leaves many loose ends.

FCC was offered some very neat transition plans before the last restructuring. All were turned down. So they obviously aren't in any hurry to tie up loose ends.

"Messy" is in the eye of the beholder. Under the above plan, we would probably have a less-complicated band chart than today.

There are all kinds of variations possible. For example, consider this one:

- Extra renamed "Full", otherwise stays as is.

- Advanced gets all 'phone privileges

- "Entry", General, and Tech/Novice get General privileges. Only difference is power level allowed.

- All classes except "Full" and "Entry" are closed off to new issues.

This isn't my ideal, just an example. Why wouldn't FCC go for it if a majority of comments supported it?

K0HB/Hans' proposal makes more and more sense....

The main importance of phase noise in amateur HF reception is that it
causes the apparent noise floor to rise when a strong signal or
signals is close to the desired signal frequency. If you are trying to
receive a -130 dBm signal and a strong signal a few kHz away mixing
with a noisy synthesized LO causes your receiver's noise floor to rise
to -120 dbm, you're out of luck.

And the amateur HF bands are often full of strong local signals
adjacent to the weak ones we want to work.

This gives us cause to wonder.....

What amateur radio equipment has Len developed?

What amateur radio equipment has Len actually used, and in what environments? (The contest environment is quite different from the "quiet band" environment)

How many contest points/countries/states/contacts has Len made with amateur radio equipment he developed/designed/built/paid for himself?

What articles on amateur radio receiver performance issues such as dynamic range (third order IMD, BDR, etc.), phase noise, etc., has he authored? Or even actually read and understood?

The world wonders....;-)

> > Try not to run off at the mouth/keyboard so
> > hastily.

Try taking your own advice ;-)

> > Try not to nit-pick like nits over minor phrases in
> > postings so that you have an "excuse" to cuss and snarl at
> > NCTAs.

What minor phrases? Len claimed that frequency synthesizer rigs were necessary for the "subdivisions" of 1968. Numerous positngs by different authors, all of whom actually had to deal with those "subdivisions" have proved that to be utterly false and without basis. Len, of course, never had to deal with them at all because he's never been a radio amateur and never operated an amateur radio station. (By FCC definition, operating requires a license).

> > It makes you look like nursie's cousin. :-)

> some knowledge of what is being discussed is making you look like
> N0IMD's antenna advisor.
>
Not using, not owning, not building, not developing......

Of course, to the knowledgeable reader, Len's postings simply reveal how truly ignorant he is of amateur radio in many ways. That's not a crime, of course, but it does get boring.

His posts also reveal how resistant is he is to new ideas and information, when presented to him from certain sources he deems inferior.

Whatta lame whack at a twist. I didn't claim any such nonsense did I?

Heh heh heh...your bafflegab won't win blind man's bluff Sweetums,
deal yourself a better hand... :-)

> >And they do it
> >without generating any phase noise or other forms of crud synthesizers
> >toss out.
>
> Kellie, define "phase noise" insofar as amateur radio operation is
> concerned.

No sweat Sweetums. If I terminate the rcvr input with a 50 ohm dummy
load via a short length of coax and am able to hear any gurgles,
chirps, squeaks, pings, skips or burps when I swish around some freq
or another it's synthesizer crud, i.e., "phase noise" in play. However
with current-tech ham gear internally-generated crud is not often a
big problem these days since it's usually below the atmospheric and/or
electrical QRN noise floor on the band under consideration. Which is
easy enough to check. Welome to the realities of "phase noise "insofar
as amateur radio operation is concerned" Sweetums.

> You, for the limits of your technical knowledge, should
> call that "incidental FM" which is what the industry term "phase
> noise" refers. :-)

Maybe when ham radio ceases to be a hobby and becomes an "industry"
Sweetums.

> Then you should examine exactly how low that terrible phase
noise
> is. You can use the term "dbc"

Amos: "Oh crap, here he goes again."
Andy: "Nudge me when he runs outta wind willya?" Zzzzz . .

> referring to the number of decibels
> below the "carrier" (center frequency reference, not a modulated

>
> 10 Hz increments are perfectly fine for SSB voice tuning, as I've
> found out with my Icom R-70.

Heh. You can't tune that pore 'ole 3-star boat anchor in 10 Hz increments Sweetums, the best you can do with the thing is tune it to the nearest 100 Hz increment yes? Of course you silly old thing. I've never seen an R-70 in the flesh so tell me, are those actually Nixies in the display for God's sake?!

If that old R-70 is your "window" to ham radio I think I'm starting to understand why you have a dour view of the hobby. You need to get past the R-70 and try a JRC NRD 545 Sweetums, like the one I have. It'll change your life.

The bald fact of the mattter is that once more a PCTA caught you bafflegabbing again Sweetums, wasn't even a decent try so once more no cigar for you.

> When I bought my R-70 (years ago), the three extras at work in the
> Van Nuys, CA, store . . .

Amos: "Oh crap, here he goes again."
Andy: "Nudge me when he runs outta wind willya?" Zzzzz . .

> erase some of your ignorance and lend credence to what I've
> said. Like, I could ask you "how's the zeta of your control loop"
> and you would be out to lunch, cussing and hollering "bafflegab!"

No Sweetums, not at all, that's not the way I work. You're being silly
again. If by any chance I ran into an arcane topic like that in which
I had any interest whatsoever I'd ask an EE to uncurl it for me.
Miccolis is across town. Then comes the non-ham PhD EE Dean at one the
universities in this neck of the woods I know well. Or my buddy
another N3/EE who goes back to our high high school days together and
ran GE's gummint relations operations in Valley Forge, etc. etc.

- - - - -

Amos: "Oh crap, here he goes again."
Andy: "Nudge me when he runs outta wind willya?" Zzzzz . .

> "Zeta" is the symbol for the response characteristic in a closed
> loop of a PLL, Fractional-N, or hybrid PLL-DDS system.

Wunnerful ducky wunnerful:

Now take a break from your bafflegabbery Sweetums and let's play in my field of professional expertise this time. Demonstrate your level of technical competence by solving a very real-world electronics design problem. Assume that you have a one inch diameter x 1/16 inch wall x eight foot long 6061T651 aluminum tube fully restrained at one end with the other and dangling horizontally in the wind. Calculate the maximum wind speed which will not produce permanent deformation of the tube.

> An
> important factor for lock-in and stability and anyone designing
> the loop filter for a synthesizer should recognize that common
> term.
>
> I've never dined in the executive dining room (the counterpart to
> your "captain's table" BS) in any electronic corporation

Hee! No surprise at all there Sweetums, there are obvious reasons . . . ah, never mind!

> but I
> HAVE designed and made frequency synthesizers. Hands-on
> work all the way, from the initial paper work-up to long hours
> in the environmental lab...to accuracies in 100 PPB over
> full military environment. Interesting, challenging work!

So solving the tube-bending problem is a piece of cake for a duz-it-all "engineering genius" like you eh Sweetums?

> USING modern equipment is NOT involving development or
> anything else. Try not to run off at the mouth/keyboard so
> hastily. Try not to nit-pick like nits over minor phrases in

I see. You have some sort of "moral responsibility" to keep us
"technically clueless" types straight do you Sweetums? I don't think
so. More like the technical groups don't put up with your nonsense
(ref: your dot antennas debacle) and you're outta aces and have no
choice but to lounge around in a lame hobby policy group. Even pore
Weenie Weenie Willy Beeper has a ham license. And you don't. Methinks
you *define* the lowest common denominator around here Sweetums.

4151. Ham Takes Fight for Tower to the U.S. Supreme Court

Newsgroup: rec.radio.amateur.policy
Date: 2004-09-28 19:20:41 UTC
From: kelly@dvol.com
Message-ID: <d22b54c3.0409281120.541e4a2a@posting.google.com>
Source record: 97777

From USA Today 25 Sept 04:

"In other action Tuesday, the high court agreed to hear an appeal involving an amateur radio operator who says the city of Rancho Palos Verdes, Calif., unjustly denied him a permit to use a radio antenna for commercial purposes.

At issue is whether the federal Telecommunications Act of 1996 provides for money damages from city officials in cases of violations, or simply a court order requiring the city's compliance. The 9th U.S. Circuit Court of Appeals ruled the radio operator was entitled to compensation.

The case is City of Rancho Palos Verdes et al v. Abrams, 03-1601."

Did you know you can donate to the ARRL through the Combined Federal
Campaign (or the United Way too, I guess)? For every dollar donated,
it keeps 27.8 cents for "administrative and fund-raising expenses."
That doesn't seem right to me.

>
>Claims! How he makes claims!

Tsk. He doesn't know what a "doctor of pathos" is, claims it is
on the Tennessee licensed heathcare people listing.

Worse tsk. No sense of humor. WE all know that there's no
such thing as a "doctor of pathos." :-)

Were nursie possessed of a sense of humor, he MIGHT be a
"doctor of comedy!" [his stuff is almost, but not quite, funny]

The closest might be a PhD in the Performing Arts or Drama.
PhD he NOT be. "Doctor" he is NOT. In anything.

Well, nursie could study and become a plumber, specializing in
drains. He could claim being a "drain surgeon." Tsk, a waste...

>> Tsk, tsk. A bald-faced LIE. :-)
>
>Indeed.

Nursieworld concept of "lie" and "truth" is twisted.

Like the PCTA extras concept of "radios exclusively for ham use,
therefore they aren't like other radio services' radios." Hi hi.

Must be some different laws of physics involved with ham radios
used for on-off carrier keying.

That would be Kellie...whose only "engineering expertise" seems
involved with antenna support structures. Kellie not know much
of the innards of frequency control subsystems in a modern radio
so he tries to misdirect onto his mechanical thing.

Do I have knowledge of modern frequency control subsystems of
radios? Yes, considerable. Such applies to all radios, not what
a designer-maker has labeled "amateur" as (as you imply) being
somehow different than other radios.

No amateur radio license is required to acquire knowledge of
radio-electronics technology. No amateur radio license will let
you legally radiate RF outside of amateur bands (beyond the
incidental/low-power government limits). In most U.S. radio
services no federal license is required to use those radios.

>and then have the rig stay put on it. Modern rigs can do that
>to the accuracy and drift of a good crystal oscillator to some
>set resolution. But for our uses, 10Hz resolution is more than
>sufficient.

That's a good summation, Robert, thank you.

10 Hz increments has been regarded as sufficient for quite a number
of years.

It all depends on the internal reference oscillator being trimmed to
the frequency it is supposed to be working at. A careful check
against WWV (for those receivers that can tune to 5, 10, or 15 MHz)
will prove that out. Since the same reference oscillator is used for
generating the transmit carrier, it will be as accurate as the receiver
once calibrated.

In the case of the mixing-by-crystal-banks plus VFO (or "PTO" for
most Collins radios), there was a dependency on the quartz
crystals being correct. Those were typically in the 30 to 50 PPM
(plus-minus) accuracy by themselves. That was GOOD accuracy
for the 50s to 60s time frame...but one band might be off on the
low side while another band might be off on the high side.

With TCXOs or VTCXOs (Temperature Compensated Crystal
Oscillators, fixed or Voltage-controlled), the drift on modern
"all band" (HF that is) transceivers can be within 1 PPM after
calibration. The old Collins "PTO" (Permeability Tuned
Oscillator) achieved stability of 50 to 100 PPM over a full
military temperature environment (-55 C to +85 C) but they
were not inexpensive. Collins amateur equipment was often
at the top of the money line when they were marketing for

the hams.

>Early 2 meter synthesized rigs had some trouble with this (the
>phase noise would "add" to the FM modulation and produce extra
>noise. Phase modulation and frequency modulation are closely
>related, one is the integral (as in calculus) of the other.

PM and FM aren't related "integrally" other than their modulation
product series expansions are extremely close, different primarily
on the signs of the series terms...thus requiring different
equalization of analog modulating signal frequencies. "Carson's
Rule" applies equally to both to estimate bandwidth versus index
of modulation.

Besides, "real hams" don't use any FM on HF...they hardly
ever go above 30 MHz. :-)

>As for HF CW, some poorly designed novice xtal oscillator
>circuits probably had it worse than a modern synthesized rig.
>And then there's chirp...

That's a fault of design, not the basic frequency control system.

If your "chirp" refers to on-off keying CW modulation, that's a
result of inattention to the rise and fall times of the keying plus
the stability of the power supply. Quite a different matter.

The subject has gotten out of hand in here with all the PCTA
extras eager to beat on any NCTA by taking a phrase out of
logical context. :-) Those all have expensive ready-builts in
their "shack" and - naturally - those rigs are the closest thing
to perfection as anything. They don't seem to know squat
about the inner technology involved in frequency synthesizers
so they want to "get even" with anyone who does. Sigh.

>Whatta lame whack at a twist. I didn't claim any such nonsense did I?

No.

What you *did* claim was that you could operate within 200 Hz of a band edge and know you were inside, using certain '50s/60s vintage equipment. Which is e a reasonable claim for the equipment involved.

btw, back in 1975 or so I designed and built a "digital dial". The way it worked was that it used TTL 74192 presettable up-down counters to count the tunable oscillator. You'd adjust dip switches for the offset and direction of each band and mode. Its time base was a 400 kHz xtal, easily zeroed to within a few Hz of WWV. The thing normally read out in 100 Hz increments but could be switched to 10 Hz or 1 Hz. Its accuracy was dependent on how well you set the time base and presets. Could be used with almost any rig. Hooked it up to a 75S3 and got an A in the course. And yes, you could easily reset it to 100 Hz. 10 Hz took a steady hand.

Later I saw a better design. It sampled and counted all the oscillators in a rig, and displayed the total. No presets to adjust - set the timebase to WWV and you're done. Could go to 1 Hz if you were willing to have it update once per second.

Wrong. Incorrect. Not true at all in the real world of HF radio.

Len has just demonstrated, once more, that he just doesn't get it.

>> "Phase noise" is a somewhat new buzzword in industry due to the
>> importance of keeping it low for QAM signals (Quadrature [phase]
>> Amplitude Modulation, a combination of PM and AM). The cell

>
>(Amos nudges Andy) "I thnk it's over, he melted down in his own hot
>air bafflegab again, wake up."
>Andy: "Are you sure? I can use more Zs."
>
Here's what *really* happens:

In an ideal superheterodyne, all the oscillators would generate pure, steady injection signals. In reality, there is always some imperfections in those oscillator signals. In modern frequency synthesizers, particularly PLL types, the imperfection takes the form of noise sidebands on the oscillator signal.

Now even first-generation designs had noise sidebands many dB below the desired LO signal. Someone who doesn't really understand the situation might react as Len does, saying that such low-level noise can't have any real effect on receiving the desired signal.

Trouble is, in the amateur HF environment we often want to listen to a weak signal surrounded by many strong ones, often only a kHz or two away. Good crystal and mechanical filters make it possible to separate such signals *if* they can get to the filter in decent shape.

What happens when the LO signal is phase-noisy is that a close-in-frequency unwanted signal mixes with the LO *noise*, and produces noise in the receiver output. With a whole bunch of strong signals, the noise can be so high that it

drowns out the wanted signal. This problem is not due to IMD, blocking or other various nonlinearities in the front end - it's due to phase noise alone. And in modern ham xcvrs where the signal is first converted up to about 70 MHz and then converted down to about 8.8 MHz by means of synthesized LOs, the problem can be severe.

Scenario: Ham in Texas is trying to work Europeans in CQWW on 40 meters. He points his 3 elements at 90 feet towards EU. Which also means towards a lot of the Northeast. There's lots of points to be had working the low-power limited-antenna hams there. But to do it, he has to be able to pick their less-than-a-microvolt signals out from between the forest of locals and East Coast legal-limit folks. And the band is busy - a signal every few hundred Hz from 7000 to 7070 or more. Plus the usual cast of megawatt SWBC above 7100 and below 7000, blasting away with big antennas aimed right at him. 100,000 microvolt and bigger signals aren't rare in such scenarios.

If his receiver's LO is noisy, he'll hear all that off-frequency RF as noise. And he won't hear the low-power limited-antenna less-than-a-microvolt stations he's trying to work. All the Inrads and DSP in the catalogs won't do any good in such a situation.

That's why phase noise is important to hams.

How many points did Len get with it in the last CQWW? Or even the last SS or
Field Day?

>> Okay, so your spiffy-schmiffy 1 Hz resolution "xcver" is "guarnateed"
>> accurate because it has a "digital dial?" I don't think so.

Nobody claimed that it was accurate. It *is* precise, however. Big difference.

>> Exact 1 Hz
>> settings imply 100 PPB (Parts Per Billion) accuracy of the master
>> reference oscillator.

Let's see - 1 part per million is 10 Hz at 10 MHz. Or 1000 parts per billion.
So 100 parts per billion is 1 Hz at 10 MHz.

>> You will NOT be able to hold such accuracy
>> and be believable to anyone who has worked to such accuracies in
>> crystal oscillators. Certainly not for the ham consumer market.

Nobody is claiming that kind of *accuracy*. Only that kind of *precision*.

>air bafflegab again, wake up."
>Andy: "Are you sure? I can use more Zs."

Yup.

Of course there's an easy and quick check of all this. Just tune in WWV and see
what the fancy digidial says when you zero beat the carrier in SSB mode. That
will tell you how accurate the reference oscillator is. Traceable directly to
NIST via the F2 layer. If you're at all careful you can get to the point where

the S meter needle is slowly fluctuating as the frequency/phase difference
wanders...

btw, some years back I was there, at NIST in Boulder. Saw the various standards
and how they keep WWV synchronized. Also visited the WWV/WWVB transmitter site.
Got lots of pictures, too.

Typically expressed as .005%. Of course that's the accuracy of the xtal itself,
before being zeroed to a better reference. WW2 FT-243s were typically good for
.005%, we do a lot better now.

>> That translates to 500 Hz at 10 MHz, by way

>Wunnerful ducky wunnerful:

Time for a radio story...

Back in high school I knew a local ham down Collingdale way who was always working on a pet project. Same age as me, saw him in school every day. Had all kinds of grand ideas of how he was going to build the next generation state-of-the-art ham rig. All solid-state, full features, all bands, all modes, etc.

Now this kid was no dummy and his ideas were basically very sound. But he didn't have anywhere near the resources or practical experience to actually finish anything. He'd draw all kinds of schematics, spin all kinds of yarns and sometimes even gather some parts. But build a working rig? Never happened. Not once. When he *did* get on the air, it was with borrowed equipment that he conned some local ham into lending him "temporarily". Until said local ham had to come over and take it back. I made the mistake of loaning the kid a QST, which I never saw again. I learned fast.

Meanwhile, those of us willing to make do with less than "SOTA" were on the air and having fun and QSOs while he pontificated.

That was about 35 years ago but the lesson is still valid: All this bafflegab doesn't make one QSO.

For some reason I was reminded of him. He sounded just like Len...
>
>Now take a break from your bafflegabbery Sweetums and let's play in my

>
>"Try not to nit-pick . . . ?!" WTF . . ? Bwaaahahaha - from the master
>of all RRAP nit-pickers!!
>
The main point is simple: Hams did not need synthesizers to stay in their bands
and subbands. Nor do they need 1 Hz or even 10 Hz accuracy on HF.

Leonard, you can't seem to get anything right of late. Kelly's advice
was totally rejected by your little electrolyte, "William". Brian posed
you a question which had nothing whatever to do with "antenna support
structures". Did you come up with the answer yet?

> Kellie not know much
> of the innards of frequency control subsystems in a modern radio
> so he tries to misdirect onto his mechanical thing.

He certainly knows more about them than you as evidenced by your
comments on phase noise compared to his.

> Do I have knowledge of modern frequency control subsystems of
> radios? Yes, considerable.

That hasn't been evident in light of your comments on the importance of
low synthesizer phase noise.

> Such applies to all radios, not what
> a designer-maker has labeled "amateur" as (as you imply) being
> somehow different than other radios.

Amateur transceivers are, for the most part, quite different than
transceivers designed for point-to-point use.

Some rigs--Ten-Tec's Omni V, Omni VI and the main receiver of the Orion
are amateur band only transceivers.

> No amateur radio license is required to acquire knowledge of
> radio-electronics technology.

Lucky for you!

> No amateur radio license will let
> you legally radiate RF outside of amateur bands (beyond the
> incidental/low-power government limits).

And?

> In most U.S. radio
> services no federal license is required to use those radios.

Sounds like a plan for you. Grab a job in one of those services and
operate like crazy.

You didn't seem to have any comments at all about your comments on phase
noise as compared to reality. My comments to you were:

"Once again, you've demonstrated that you know very little about
problems
with much of the amateur radio equipment produced within the past couple
of decades. Noticeable phase noise appears not only in the receiver
output section of many transceivers but in the transmitted signals as
well. 1980's top of the line Kenwood TS-930's were rife with the phase
noise products and synthesizer spurs. A quick spin of the main tuning
dial with no antenna connected would result in a rapid p-t-t-t-t-t-t-t-t
sound from such spurs. R.L. Drake's TR-7 had much less phase noise.
Rigs such as Ten-Tec's Omni VI series, using a crystal mixed front end
had almost no measureable phase noise."

"The folks in Newington whom you frequently enjoy insulting might put
you
on the road to being informed:

http://www.arrl.org/files/infoserv/tech/bestrig.txt

under 'Q. What do you mean by receiver cleanliness'?

You may continue your education by looking at the following pdf file
under section 1.2.2:

http://www.qth.com/inrad/managing-interference-ch1.pdf

One of the Polish fellows has published some excellent information.
The phase noise issue is touched upon in the last few paragraphs:

http://www.gmdx.org.uk/dxtest/qx9racze.pdf "

That "off on the low side while another band might be off on the high side" stuff might be correct if not for the individual band trimmers featured in all such equipment. R.L. Drake and Ten-Tec also used PTOs in their equipment.

> With TCXOs or VTCXOs (Temperature Compensated Crystal

Ten-Tec and Drake equipment achieved similar accuracy and were sold at much lower prices than comparable Collins gear.

> Besides, "real hams" don't use any FM on HF...they hardly
> ever go above 30 MHz. :-)

Is this just another things you've heard from someone else, Leonard? While I use 2m FM, most of my operation on 6m, 2m and 70cm is on SSB or CW. I have the latitude to choose a band I like and to operate there. I can do this from my home or from my car.

> The subject has gotten out of hand in here with all the PCTA
> extras eager to beat on any NCTA by taking a phrase out of
> logical context. :-)

It surely does get out of hand but not because of anything being taken out of "logical context". It happened because you spouted off about something you weren't up on. You compounded things by not admitting to your lack of knowledge. You tried to fine tune your original statements and were snagged yet again.

> Those all have expensive ready-builts in
> their "shack" and - naturally - those rigs are the closest thing

> to perfection as anything.

Jim's isn't ready built. Mine is. They're both as close to perfection
as anything. Why would that bother you?

> They don't seem to know squat
> about the inner technology involved in frequency synthesizers
> so they want to "get even" with anyone who does. Sigh.

"Tney" seemed to know enough to chew you up and spit you out on your
synthesizer spur and phase noise gaffes. You'd better bring yourself
up to date, old fellow.

The ARRL has a lot of expenses, of course. A fair bit of cash
is needed to buy fuel for the ARRL's fleet of Black Helicopters.
Maintenance on the Secret ARRL Lair, beneath Lake Geneva,
guarded by the Knights Templar, is also pretty costly. And
the remote monitoring of anti-ARRL kooks, so they can be
quickly rounded up when the New World Order takes over, is
another costly program--but well worth it, IMO.

Right, but sometimes inband operational requirements dictate that we
get dead on some freq or another. Within reason of course. Spots
pouncing, etc.

> We *are*
> required, and have long been required, to be within the band or subband. Len
> can't seem to grasp that concept.

He understands the law but he doesn't understand how we meet it's
req'mts so he bafflegabs over the horizon on the subject often wrong
all the way.

> Remember the HRO-500?

You bet. Disaster box. W3WPG was both a beta and a production version
tester of the 500 and I twiddled bofum myself at his place in Chester.
Both sounded like a bag of radio canaries (species phaseum noisium
boids) and National forthwith went bust despite Hal's imploring them
not to put that POS on the market. .

> That *is* a nice rig. Did a good job on FD.

Prolly not a good idea for me to loiter on this subject in this NG
James but much to my surprise yes that slick little rig has proven to
be a diamond in the rough. But to hell with it, I'll loiter anyway,
the bandwidth is free.

Radio story (diatribe):

When I went radio hunting a couple years ago I had a very specific set of 'wants' centered around very high portability but also with the ergonomnics and front-panel controlability of a full-size competition-grade home station desktopper. A five pound underdash Omni. With a full panel of KNOBS, not menus dammit!

(Reminds me of the time I participated in a brain-storming session pulled together by some of the guys from the Boeing Helicopters power transmission group. The chief Boeing gearbox wonk started the session off with "OK gentlemen the mission here is to come up with a transmission which is capable of transmitting an infinite number of horsepower to the rotors, weighs nothing and does not require any installation space.")

I put a bunch of effort into my quest for what amounted to my particular vision of an ultimate 100W all modes Field Day xcvr. I didn't care where it came from. Current catalog units new or used, out-of-production types on the used gear market, etc. I paid a lot of attention to the online users reviews and lab test reports of a bunch of candidate rigs. It didn't take long for me to write off all of the current crop of whizzy do-it-all underdash xcvrs because of their absolutely lousy basic performance. Bottom-end BDRs, IMDs, fershtink selectivities (ceramic filters . . . gimmee a break!) along with a lack of open filter slots, menu-dipping galore. IC-706, FT-897, etc. Toy radios for the no-clues, fuhgeddit, allum. But (almost) all of those writeoffs do offer the ability to get on the VHF/UHF bands with all modes, a capability I added to my "gotta-have" list. I just *gotta* do some 6 & 2M cw & ssb.

Can't imagine how that sweet old thing from Smog Central came up with his whacky comments about PCTAs not being into the VHF/UHF bands. He needs his head bolts retorqued.

Did not take long for me to zero in on the FT-847 because it's the only xcvr out there anywhere which meets all of my basic objectives. Despite it's reputation for being a heap of compromises and having a collection of goofy warts and quirks. I also discovered that most of it's numerous warts can be fixed with a soldering iron. No-brainer there if one isn't afraid to perform surgery on a new kilobuck+ radio's innards.

So I popped for one knowing full well that I'd bought something of a Yaesu "'kit radio".

Out-of-the-box and tuning around the HF bands it was it was, shall we say, pretty unimpressive. Dismal? Woulda turned you off five seconds into a test listen. But I expected that. The killer mod was the installation of the 400Hz and 2.1Khz 8-pole INRAD IF filters a few weeks before you got your mitts on it during this past FD and commented it's an acceptable if not a rather decent performer. Given the fact that you ain't got much tolerance for lousy front ends, phase noise, birdies, menus, crummy selectivity and such.

I might even have the temerity to take it into the upcoming CQ WW CW meatgrinder barefoot with a G5RV depending on how the plans work out for a go at it with K3NL from his place. The K3NL "planning committee" meets tomorrow at Casey's on Lansdowne Ave. Heh.

The dollars I've invested to date my moded 847 are not trivial, I'm already at a bit over $1,500 and climbing as I keep adding "enhancements"to the thing . . . yeah, I know, I could have bought a used FT-1000MP (Not a "Field"!) for those kind of bucks. But an MP is not a pack 'n go rig like the 847 nor is it usable >30Mhz. so that was the end of that. I'll pick up an MP later and have the best of both worlds. I did draw some lines on the monies though. My original intent was to spend around $800 for a used 847 which are everywhere in the used market. The street price from HRO at the time was around $1,500. No way! But I ran into a sale on new 847s for $1250 gulped hard, bit the bullet and bought it. The two filters cost $155 each. Current HRO price is $1,400 which I still wouldn't go for.

I rattle on too much as usual. My point is that if there's anybody out there still awake and looking for a nice little portable xcvr which covers 12 bands and does all modes much better than the really compact (junkers) the 847 is coming up a good choice for this particular OF.

It's about 11 x 11 x 3.5 inches big and only weighs 16 pounds.

> featured in all such equipment.

Yep.

Now consider how much error we're talking about. Some rigs used heterodyne xtals as high as ~40 MHz on 10 meters. .005% works out to 2000 Hz on a 40 MHz xtal *before correction*. So the worst case could be a total variation of maybe 4 kHz if one was high and another low - on 10 meters. On the lower bands the error is less.

But all this is pretty meaningless because even the lower-priced rigs have built-in calibrators and VFO/PTO calibration adjustment (usually a dial pointer adjustment). The Heath SB-line, which isn't topshelf stuff by any stretch of the imagination, had builtin calibrators, a linear VFO and dial adjustment. In the early 1960s, at a price far below Collins or Drake.

The digital-dial rigs like the TT Orion D and Corsair avoided the problem by using a built-in custom frequency counter to actually count the various oscillators. IIRC, this concept first appeared commercially in the amateur market in the DG-5 accessory to the TS-520S.

> R.L. Drake and Ten-Tec also used PTOs

Collins amateur gear was much less expensive than commercial or
military equipment of the same vintage, and more suited to typical
amateur use. Most hams are not going to be using their equipment at
+85 C or -55 C.

There's also quite a bit of FM in use by hams on 10 meters. Plus FSK
is a form of FM...

Let's take a look at those phrases:

From 2004-09-22 20:47:30 PST

LHA: "All those subbands are simply for "staking out territory." "

They were actually about creating an incentive to learn more theory
without losing access to a band or mode.

LHA: "None of that elaborate U.S. subdivision would be possible
without the modern frequency synthesizers that were NOT developed for
amateur radio but adopted for that particular market."

Repeatedly proven to be incorrect, in error, and without any basis in
fact. Hams then and now are able to stay within their bands and
subbands without any need for "modern frequency synthesizers".

LHA: "I doubt that even the most ivy-decorated in here could explain how to make a PLL subsystem that achieves 10 Hz resolution using 10 KHz references for their PFD. I wouldn't even bother asking them if they knew how a DDS works... :-)"

It is not clear to whom Len refers as "ivy-decorated in here". If he is referring to me (Jim, N2EY), he's completely wrong, because I could explain both PLL and DDS designs at length and in detail.

> > Those all have expensive ready-builts in
> > their "shack" and - naturally - those rigs are the closest thing
> > to perfection as anything.
>
> Jim's isn't ready built.

Neither HF rig in current use at N2EY is expensive or "ready built". But they work, are on the air regularly, meet FCC regulations, and do their jobs well.

So what's the problem?

I can explain how they work in detail. I'll even draw you schematics of the Southgate Type 7 from memory. (It ain't simple, either). Amazes shack visitors of all ages and levels of technical ability.

Just my particular brand of fun in ham radio.

What's wrong with any of that?

The K2 has a single-loop PLL LO that achieves very low phase noise by an ingenious design. This design intentionally trades off some accuracy and general coverage reception in order to improve phase noise, simplicity and power consumption. Its performance against "ready built" transceivers costing much more is well documented.

It wasn't designed by Len. I doubt very much he understands how it works, nor could he explain it....;-)

> Mine is. They're both as close to perfection
> as anything.

Which is to say, none of them are perfect!

Len's errors here prove he's not perfect either...

> Why would that bother you?

The fact that we amateurs are actually designing, building and using rigs on the air seems to bother Len no end. The fact that we are using equipment, modes and technologies he has not personally blessed seems to bother him even more.

> > They don't seem to know squat
> > about the inner technology involved in frequency synthesizers
> > so they want to "get even" with anyone who does. Sigh.
>

> "Tney" seemed to know enough to chew you up and spit you out on your
> synthesizer spur and phase noise gaffes. You'd better bring yourself
> up to date, old fellow.
>
Not chewing up or spitting out anybody, Dave. Just pointing out a few
errors of Len's. He makes it easy, really.

Recall the original claims that started all of this, and how Len keeps
trying to avoid admitting his mistakes:

"All those subbands are simply for "staking out territory." "

"None of that elaborate U.S. subdivision would be possible without the
modern frequency synthesizers that were NOT developed for amateur
radio but adopted for that particular market."

"I doubt that even the most ivy-decorated in here could explain how to
make a PLL subsystem that achieves 10 Hz resolution using 10 KHz
references for their PFD. I wouldn't even bother asking them if they
knew how a DDS works... :-)"

>the imperfection takes the form of noise sidebands on the oscillator signal.

Technically wrong. DDS is more susceptible to spur generation and
phase noise than Fractional-N and Fractional-N is more susceptible
to that than PLLs.

Tsk. You haven't spent much time with a spectrum analyzer...

>Trouble is, in the amateur HF environment we often want to listen to a weak
>signal surrounded by many strong ones, often only a kHz or two away. Good
>crystal and mechanical filters make it possible to separate such signals *if*

other
>various nonlinearities in the front end - it's due to phase noise alone.

Tsk. Simplistic untruth.

Intermodulation distortion and front end noise is enough to cause that.
As part of the IMD, the 3rd Order Intercept point values figure in.

You can get IMD in stages beyond the mixer. To "prove" that point,
you would have to measure the IMD at various gain settings (manual
or AGC).

The worst part of that untrue statement is that "all those other things"
were existant before the advent of frequency control by synthesizer.
In ham radios as well as the radios in every other radio service.

>1 Hz is common in modern manufactured amateur equipment. But that's not
>really the issue.

Tsk. Why are Jimmie and Kellie trying to make so much of that
resolution? :-)

>R-70 is a pretty good receiver. Almost qualifies as a boatanchor now....

Only for a small liferaft. It can be easily carried in one hand. It comes equipped with a handle on the side, apparently for that purpose. :-)

But, you will try to use my owning an R-70 as all sorts of denigrations. Kellie did...and was completely wrong...but then he only "favors" those equipments that he's owned or has handled.

>How many points did Len get with it in the last CQWW? Or even the last SS or
>Field Day?

Irrelevant. Had I an HF-privilege ham license, I wouldn't bother with contesting. I've said that before.

If I wanted sports, I would go to athletics...REAL sport.

[if I wanted "road races," I'd get a sports car as I used to have and do minor gymkhanas, etc., in REAL road races]

>btw, some years back I was there, at NIST in Boulder. Saw the various
standards
>and how they keep WWV synchronized. Also visited the WWV/WWVB transmitter

>doesn't make one QSO.
>
>For some reason I was reminded of him. He sounded just like Len...

Poor baby. Still with the insults sugar-coated with hypocritical
"civility?"

Tsk. I lost interest in DXing in "radio sports" and the wallpaper
collection of QSLs after working at station ADA long ago.

Became a professional in the radio-electronics industry, got regular
money for not only designing, but building and testing, following
through in the field, etc., etc., on many projects.

Do you find that without honor? Without any worth?

Why do you?

>The main point is simple: Hams did not need synthesizers to stay in their
>bands and subbands. Nor do they need 1 Hz or even 10 Hz accuracy on HF.

In Jimmie's world, yes. :-)

It must be right across the border from nursieworld. :-)

Tsk. Some "runner." Takes up one phrase and runs and runs and
runs trying to prove another is unworthy in his presence. :-)

Tsk. Those runs could be cured with some kaopectate...

"Authors?" Who in here, besides myself, can claim many bylines
and a staff position at a ham magazine? Not Jimmie. Not Davie.

>Len, of course, never had to deal with them at all because he's never
>been a radio amateur and never operated an amateur radio station. (By
>FCC definition, operating requires a license).

Pity that. All that while as a professional and never becoming a
licensed amateur! Horrors!

>Of course, to the knowledgeable reader, Len's postings simply reveal
>how truly ignorant he is of amateur radio in many ways. That's not a
>crime, of course, but it does get boring.

Poor baby. Bored are you? Tsk, tsk.

Jimmie needs a hobby activity or to get out and see more things.

Jimmie ought to understand that radio amateurs didn't invent radio
nor did they develop all the circuits and systems in modern ready-
built radios. Tsk.

>His posts also reveal how resistant is he is to new ideas and
>information, when presented to him from certain sources he deems
>inferior.

Tsk. Still on that inferiority complex are you?

Don't worry. You keep shouting and denigrating your inferiors and
all will respect you in the morning. :-)

>amateur use. Most hams are not going to be using their equipment at
>+85 C or -55 C.

Tsk. Not playing the heroic instant Emergency Communicator,
ready for every emergency when the commercial infrastructure fails?

Riiiight...all ham activity happens at "normal room temperature."

Hi hi.

>There's also quite a bit of FM in use by hams on 10 meters. Plus FSK
>is a form of FM...

"Real" hams use CW to DX on HF. Ho hum.

>Let's take a look at those phrases:

Yes. Go over and over and over and over and over and over them
until you tire out the opposition to your golden words of truth and

beauty (which are never ever wrong). :-)

>LHA: "All those subbands are simply for "staking out territory." "

That's my opinion and I'm holding to that.

If you don't like it, TS.

>They were actually about creating an incentive to learn more theory
>without losing access to a band or mode.

If that's your evaluation, then you are badly in need of something
to relieve your mental constipation.

>LHA: "None of that elaborate U.S. subdivision would be possible
>without the modern frequency synthesizers that were NOT developed for
>amateur radio but adopted for that particular market."

That's a corollary to my subdivision opinion.

Again, if you don't like that opinion, TS for you. :-)

>Repeatedly proven to be incorrect, in error, and without any basis in
>fact. Hams then and now are able to stay within their bands and
>subbands without any need for "modern frequency synthesizers".

Ooooooo! "repeatedly 'proven' to be incorrect, in error and without
any basis in fact! Oooooo. Tsk, tsk. :-)

Geez, better get an Exorcist, you are going to proclaim me the
AntiChrist next. :-)

>It is not clear to whom Len refers as "ivy-decorated in here". If he
>is referring to me (Jim, N2EY), he's completely wrong, because I could
>explain both PLL and DDS designs at length and in detail.

Riiiiight...you've got lots and lots of industry experience in that,
many products on the market...just like you were in the space
business so long that you could call others "wrong" about having
opinions opposite to your "expertise."

>Neither HF rig in current use at N2EY is expensive or "ready built".
>But they work, are on the air regularly, meet FCC regulations, and do
>their jobs well.

I suppose next you have Proof of Performance papers, fully
notarized and witnessed, that they are ipsy-pipsy "within spec?"

>I can explain how they work in detail. I'll even draw you schematics
>of the Southgate Type 7 from memory. (It ain't simple, either). Amazes
>shack visitors of all ages and levels of technical ability.

Tsk. You've yet to explain that "Southgate Type 7." [other than the
unusual name] Does it appear in ham literature? In Nobel archives?

>Just my particular brand of fun in ham radio.

Trying always to be the Superior in anything is fun for the ego-driven. Lots of PCTA extras in here (practically all of them) get their jollies that way.

>What's wrong with any of that?

Nothing "wrong" with that other than taking over the flow of debate with your pet fun-and-games and promoting morse well over and above any valid reasons for keeping the morse code test.

But, you consider yourself Superior and therefore "must" triumph in all things. :-)

>The K2 has a single-loop PLL LO that achieves very low phase noise by
>an ingenious design. This design intentionally trades off some
>accuracy and general coverage reception in order to improve phase
>noise, simplicity and power consumption. Its performance against
>"ready built" transceivers costing much more is well documented.

Jimmie has a K2. Naturally it is "superior" to all others.

>It wasn't designed by Len. I doubt very much he understands how it
>works, nor could he explain it....;-)

Jimmie designed the K2? :-)

>Which is to say, none of them are perfect!
>
>Len's errors here prove he's not perfect either...

Heavens...Jimmie wants PERFECTION in all things!

Naturally, PCTA extras are "always perfect" in everything?

Of course they are. They will tell you right off... :-)

>The fact that we amateurs are actually designing, building and using
>rigs on the air seems to bother Len no end. The fact that we are using
>equipment, modes and technologies he has not personally blessed seems
>to bother him even more.

Doesn't bother me a bit. :-)

I've still "done" modes, modulations far more than is allowed in the U.S. ham bands. [that even includes CW, heh heh heh]

It's a bit irritating when everyone uses verbatim sales ad phrasing and OTHERS reviews as Gospel as if they themselves have used and operated all the equipment they mention.

>Not chewing up or spitting out anybody, Dave. Just pointing out a few
>errors of Len's. He makes it easy, really.

Isn't it awful? There oughta be a law against anyone having opinions opposing the PCTA extras!

>Recall the original claims that started all of this, and how Len keeps
>trying to avoid admitting his mistakes:
>
>"All those subbands are simply for "staking out territory." "

That's my opinion and I'm staying with it.

>"I doubt that even the most ivy-decorated in here could explain how to
>make a PLL subsystem that achieves 10 Hz resolution using 10 KHz
>references for their PFD. I wouldn't even bother asking them if they
>knew how a DDS works... :-)"

Tsk. When I preparing to buy my Icom R-70 at the Van Nuys, CA,
HRO, I asked three hams behind the counter how Icom achieved
10 Hz resolution using a 10 KHz reference to all the phase-frequency
detectors. None of the three knew. Two of those were extras.

I got a copy of the Icom User's Manual and figured it out myself.
Looked like it was worth the money. Went back later and bought
one. Cash. It's been working fine ever since.

I'll have to go back to old checkbook transactions to find the
purchase date (one has to be EXACT for Jimmie da Perfectionist).
Needless to say, DDS frequency control subsystems weren't yet
in the offshore-designed-and-made ham transceivers. [this statement
ought to be good for another few weeks of Jimmie "proving me wrong
in all things" :-)]

Well, Jimmie KNOWS how all that ham frequency control stuff works
so he doesn't have to explain "zeta" (that's a control loop damping
factor, Kellie) nor does he have to explain why a 10 KHz reference
is used (there's a technical reason) nor anything else. When he
needs to show off his Superiority (just about every day), he climbs
K2 and plants his flag on the summit and announces he is
equivalent to Sir Edmund (and probably Tenzing too) of the ham world.

By the way, the '190 and '192 up-down decade counters went
DEFUNCT on everyone's semiconductor production line some years
ago. ON Semiconductor will do a limited production run if you
guarantee acceptance of a lot of 2500 of the 74F190s...just the
thing for any teen ager's senior project, ey? Wow, guaranteed
"A" on a report card, maybe even a gold star sticker to boot. :-)

Tsk. All I got for using some 74S190s back in 1977 was a
continuation of a paycheck every week. Not as good as an "A"
on a report card, huh? :-)

The '191 and '193s are still in active production. I'm currently
using some 74AC191s, by the way. Want to discuss the differences
of the TC (Terminal Count) output between '191 and '193? Timing in
nanoseconds of propagation delay clock-to-TC, setup time to the
PL_not (Parallel Load for preset input), and maximum guaranteed
programmable counter operating frequency? [more "bafflegab" for
Kellie to bitch about, heh heh]

Pack up your pitons. I'm sure you will want to climb K2 again. :-)

LenAnderson@ieee.org

BTW, I went to my other screen name and sent a couple of missives in reply to you. That ought to be good for another year of bitching about "false identities" and your saying I have "countless other names." :-) Still "signed" by me with the ieee.org alias. :-)

Ayup, I'll bet you make a big thing about the "alias" too! :-)

Offhand, I'd say nursie ain't natural at all.

Or maybe its just Post-Traumatic Stress Disorder from all those
"hostile actions" in the military?

Riiiiiight...like there's a "regulation uniform" required to fly a single engine aircraft as "pilot in command." :-)

Do you fall out of the CAP barracks every morning for roll call and inspection? :-)

>> >> So far, you've been hiding the Where and When of those famous

No? With all the Drama you've presented? Tsk...

> Just a license to practice in the healthcare profession...Which >is more than you ahve in ANY discipline.

Incorrect, but if it pleases your imagination and fantasies, continue that. :-)

CREDENTIALS are everything?

ABSOLUTELY in nursieworld.

Not only does one have to test for morsemanship to operate in the ham bands below 30 MHz, the "superior' ones have to be "credentialed in the healthcare profession?"

>> Worse tsk. No sense of humor. WE all know that there's no
>> such thing as a "doctor of pathos."
>
> We all know there's no Lennie Anderson as a licensed Amateur
>Radio operator.

Tsk, tsk, tsk. There's a Leonard H. Anderson in the FCC database
for radio amateurs.

Not me, though I find it curious that everyone MUST show their
ham credentials in order to post in here. :-)

>> Were nursie possessed of a sense of humor, he MIGHT be a
>> "doctor of comedy!" [his stuff is almost, but not quite, funny]
>
> However nursie DOES get quite a few belly-laughs from the lies,
>deceit and newsgroup misconduct of Leonard H Anderson and Brain P
>Burke, both known antagonists and pathological liars.

Tsk. You've failed to distinguish which Leonard H. Anderson you
talking about.

It's not "civil discourse" to send nastygrams about someone you
don't even know... :-)

>> The closest might be a PhD in the Performing Arts or Drama.
>> PhD he NOT be. "Doctor" he is NOT. In anything.
>

Don't think of yourself as "scum." :-)

>> >> Tsk, tsk. A bald-faced LIE. :-)
>> >
>> >Indeed.
>>
>> Nursieworld concept of "lie" and "truth" is twisted.
>
> Where's "Nursieworld", Lennie?

Inside nursie's balding head. :-)

> And there's nothing twisted about the mistruths and deceit that
>have been promulgated from YOUR keyboard.

"Promulgated?" Are you studying English for Dummies and
have gotten to the P-words? :-)

>> Like the PCTA extras concept of "radios exclusively for ham use,
>> therefore they aren't like other radio services' radios." Hi hi.
>
> Still more mistruths.

Isn't it terrible!?

> Why do you persist in telling the SAME lies over and over,
>Lennie?

Tsk. Nursie live in "regulation" nursieworld, all orderly, correct
according to nursieworld orders of the day.

No one else allowed any differing opinions...those differing
opinions are "lies, mistruths, errors!" :-)

> Force of habit?
>
>> Must be some different laws of physics involved with ham radios
>> used for on-off carrier keying.
>
> No different physics, Lennie. Nice try. Same dodge. Same lies.
> Same Lennie.

Not "different?" Tsk. You've finally gotten around to reality that
electrons, fields, and waves obey THEIR own rules and not yours?
Tsk.

Sounds like a breakthrough in your thinking!

> Putz.

I spoke too soon. :-)

Here we go with the cute little Yiddish pejorative meaning "penis
head" again. You keep stumbling on that first step of training.
Try to hold onto the bannister as you climb those steps.

Whatta giggle. He gets mad and stamps his feet and rants when somebody points out that he's been firmly proven wrong and has made a nitwit of himself again.

Back to the elementary school recess crybaby analogy.

97.101b - No frequency will be assigned for the exclusive use of any
station.

97.113a - No amateur station shall transmit any communication the purpose
of which is to facilitate the business or commercial affairs of any party.

97.113e - No station shall retransmit programs or signals emanating from
any type of radio station other than an amateur station.

97.313b - No station may transmit with a transmitter power exceeding 1.5 KW
PEP. (Ref: KE8SP, Tex Martin)

I agree - I still use my R-70 almost daily. Bought it new in 1981,
still works quite well (its tuning arrangement is a bit weird at the
"xx.000" MHz areas, but once you get used to that it's OK...). This
was an impressive rig when it was first introduced - and with the Kiwa
filters installed it can pull DX signals out of the mud as well as
many of the current receivers in its class.

Still an excellent performer, actually - one of the best investments
in radio equipment that I have ever made.

If only it had some of the features of the R-71 - direct frequency
entry, capability for computer control.....oh well.....

Well thought out Ken, but its the Knights of Columbus (hmmm KC changed
by those rascally Euros to MC)who reside in Hartford and don't forget
that they have cloned the Chairman and now
have his precious body fluids in a jar in Newington.

Major Kong's plane's primary target is an ICBM complex at Laputa. In
Jonathan Swift's 1726 novel Gulliver's Travels, Laputa is a place
inhabited by caricatures of scientific researchers. Hmmm sounds like
Newington to me

Cheers and beers Till we meet again

>
> Hi hi.

Now, Leonard -40F and -40C occur at roughly the same point. Have your
ever participated in amateur radio emergency communications outdoors
when the temp was -40? Oh, that's right--you've never participated in
amateur radio emergency communications at all! Have you ever been
anyplace on this planet where the outdoor temperature sat at +85C?

> >There's also quite a bit of FM in use by hams on 10 meters. Plus FSK
> >is a form of FM...
>
> "Real" hams use CW to DX on HF. Ho hum.

Ho humbug! You've little idea of what "real" hams do.

> >Let's take a look at those phrases:
>
> Yes. Go over and over and over and over and over and over them
> until you tire out the opposition to your golden words of truth and
> beauty (which are never ever wrong). :-)

Let's at least go over them enough times that everyone except you
realizes your errors.

> >LHA: "All those subbands are simply for "staking out territory." "
>
> That's my opinion and I'm holding to that.

You're simply wrong. Then again, you aren't a ham so perhaps you could
be excused for not knowing. Now that you've been advised, I'd expect
that you'd be sharp enough to keep from sticking with the same erroneous
view.

> If you don't like it, TS.

Does that mean you'll cling to a position no matter how wrong you are?

> >They were actually about creating an incentive to learn more theory
> >without losing access to a band or mode.
>
> If that's your evaluation, then you are badly in need of something
> to relieve your mental constipation.

No problem we can always treat ourselves to another dose of Dr. Len's
newsgroup salts.

> >LHA: "None of that elaborate U.S. subdivision would be possible
> >without the modern frequency synthesizers that were NOT developed for
> >amateur radio but adopted for that particular market."
>
> That's a corollary to my subdivision opinion.

No, that's just you compounding your errors.

> Again, if you don't like that opinion, TS for you. :-)

Why dontcha make us all use synthesizers? Did you read up on the phase
noise problem at any of those urls I provided?

> >Repeatedly proven to be incorrect, in error, and without any basis in
> >fact. Hams then and now are able to stay within their bands and
> >subbands without any need for "modern frequency synthesizers".
>
> Oooooooo! "repeatedly 'proven' to be incorrect, in error and without
> any basis in fact! Oooooooo. Tsk, tsk. :-)

An "Oooooooo" and a "Tsk, tsk" aren't much of a defense, are they?

> Geez, better get an Exorcist, you are going to proclaim me the
> AntiChrist next. :-)

I'd expect the Antichrist to have his ducks in a row.

> >It is not clear to whom Len refers as "ivy-decorated in here". If he

>
> Tsk. You've yet to explain that "Southgate Type 7." [other than the
> unusual name] Does it appear in ham literature? In Nobel archives?

The name "Southgate" has certainly appeared in ham literature.

> >Just my particular brand of fun in ham radio.
>
> Trying always to be the Superior in anything is fun for the ego-
> driven. Lots of PCTA extras in here (practically all of them) get
> their jollies that way.

Only you can read "just my way particular brand of fun in ham radio" and
take it as a statement of ego-driven superiority.

> >What's wrong with any of that?
>
> Nothing "wrong" with that other than taking over the flow of debate
> with your pet fun-and-games and promoting morse well over and
> above any valid reasons for keeping the morse code test.

...as compared to your attempting to take over the flow of debate with
your pet fun and games and promoting the abolition of morse code testing
in an endeaver in which you play no part?

> But, you consider yourself Superior and therefore "must" triumph
> in all things. :-)

Don't you mean "but you've proven me wrong and I just can't abide that"?

> >The K2 has a single-loop PLL LO that achieves very low phase noise by

>
> Jimmie has a K2. Naturally it is "superior" to all others.

That's funny, I didn't see that written. Do you suppose it is
ego-driven as well?

> >It wasn't designed by Len. I doubt very much he understands how it
> >works, nor could he explain it....;-)
>
> Jimmie designed the K2? :-)

Do try and stay with the flow. He said it wasn't designed by you.

> >Which is to say, none of them are perfect!
> >
> >Len's errors here prove he's not perfect either...
>
> Heavens...Jimmie wants PERFECTION in all things!

Don't you strive for perfection, Leonard, or are you happy with slapdash
design?

> Naturally, PCTA extras are "always perfect" in everything?

I'm sure it seems that way to a guy like yourself.

> Of course they are. They will tell you right off... :-)

Actually, telling you off isn't at all unpleasant.

> >The fact that we amateurs are actually designing, building and using
> >rigs on the air seems to bother Len no end. The fact that we are using

> Needless to say, DDS frequency control subsystems weren't yet
> in the offshore-designed-and-made ham transceivers. [this statement
> ought to be good for another few weeks of Jimmie "proving me wrong
> in all things" :-)]

For a twenty-something-year-old design, it isn't bad. It does suffer
from the same thing which plagued many Icom transceivers of its day--the
front end folds up in the presence of nearby strong signals.

No, I've developed the same number of marketable ham transceivers you
have, Leonard--none. Then again, I was aware of the synthesizer phase
noise and spurs. You weren't. You attempted to spoon feed us crap.

> >What minor phrases? Len claimed that frequency synthesizer rigs were
> >necessary for the "subdivisions" of 1968.
>

Authors. You know, who writes something. I've had a number of bylines in amateur radio magazines. Be careful, you'll end up looking like Brian Burke in his A-1 Op Club gaffe.

> >Len, of course, never had to deal with them at all because he's never
> >been a radio amateur and never operated an amateur radio station. (By
> >FCC definition, operating requires a license).
>
> Pity that. All that while as a professional and never becoming a
> licensed amateur! Horrors!

Do us a favor and note that this newsgroup is rec.radio.amateur.policy. I'm not impressed with your frequent touting of your past professional status. Many radio amateurs are current or past professionals in communications or electronics. Tooting your horn about your past work and attempting to use it as a substitute for an amateur license in an amateur radio newsgroup isn't likely to win you any points among hams.

> >Of course, to the knowledgeable reader, Len's postings simply reveal

> Jimmie needs a hobby activity or to get out and see more things.

Oh! Didn't you know? Jim's a licensed amateur radio operator. Maybe you could take up amateur radio.

> Jimmie ought to understand that radio amateurs didn't invent radio
> nor did they develop all the circuits and systems in modern ready-
> built radios. Tsk.

I'm guessing that Jim and everyone else here was already aware of that factoid. Jim likely realizes that you didn't invent radio or all of the circuits and systems in modern ready-built radios. That makes you even.

Really? Did you do lots of contesting and DXing from ADA? Still have
the QSLs?

> Became a professional in the radio-electronics industry, got regular
> money for not only designing, but building and testing, following
> through in the field, etc., etc., on many projects.
>
> Do you find that without honor? Without any worth?

Len, I have known many men who have done similar work. With few exceptions, I have viewed their work as honorable. It obviously had worth as all of them received paychecks. We radio amateurs don't receive paychecks for what we do. We do it strictly for the love of it. I'm sure your professional achievements have pleased you. They don't get you any passes in amateur radio. What pleases you hasn't necessarily impressed us.

Your grating manner and rudeness to radio amateurs have not endeared you to more than a couple of people here. You strike me as the kind of guy who goes wandering through life asking, "Why don't people like me?". I'll bet you haven't an idea of the answer.

> >The main point is simple: Hams did not need synthesizers to stay in their

Neat collection of recycled toob equipment...looks like "shacks" of
the 50s and 60s. Appears to be a giant collection of QSTs to the
right...(archives of the renowned historian no doubt). :-)

Wonder if the K2 is still in the Himilayas? :-)

Pass me that Sherpa...

It's still a tiny thing, hardly a "boatanchor" (unless one has a 1/12th
scale model of a boat).

I agree on the "xx.000" MHz switch-over. :-) That might have been
a programmer's thing on what I speculate as a design argument at
Icom...how to do switching to the adjacent MHz. They might have
added some "hysteresis" on tuning but one can become
accoustomed to it. I got no mods in this one.

>Still an excellent performer, actually - one of the best investments
>in radio equipment that I have ever made.

I will agree to that. [I think we bought at about the same time]
The tuning shaft encoder and very slight friction lock is still as
good on mine now as when it was new. Over a dozen years.

>If only it had some of the features of the R-71 - direct frequency
>entry, capability for computer control.....oh well.....

I thought about adding an outboard controller to have all the
"memory" things but used the parts for other things. :-)

It definitely needs an outboard audio amplifier and big speaker since the little one on the panel is not robust for anyone else but self. For a while I used an old Hi-Fi mono amplifier with it and an ancient 6" diameter speaker in a fair enclosure. Sound was just dandy then.

Since wife and I had a major re-do of the roof and guttering, I've been meaning to try connecting to the end of the 45-foot run of seamless alumininum gutter on the downhill side (it is 22 feet longer on the uphill side, but closer to power lines). Need to recalibrate the Noise Bridge and see what kind of weird impedance it presents at different frequencie...and the change of that in the rain to come. :-) Sort of a "low-slung long wire" in a way. [watch for all the detractors on that...heh heh heh[

In this in-the-hills location there's little chance for low-angle skip arrival from north to east...all the fancy-schmansy antennas won't help getting Yurp or the UK here. Nevis rules. Excellent on Ozzyland and the home of the Middle Earth and LOTR.

Strange that so MANY signals on HF originate from stations whose operators don't have to have a code exam...or even an amateur radio license. :-) Outside of the ham bands, of coarse. :-)

Tsk. Ask the behind-the-counter types at HRO if they do 9-5
for free... :-)

>I'm sure your professional achievements have pleased you.

They sure did.

>They don't get you any passes in amateur radio.

Yes, and amateur radio licenses don't mean squat to legal
operating in the rest of the radio world.

Sunnuvagun!

>What pleases you hasn't necessarily impressed us.

Yes, your supreme royalness. Humblest of apologies, your worship.

>Your grating manner and rudeness to radio amateurs have not endeared you
>to more than a couple of people here.

Awwwww.

Tsk. Nothing an NCTA says can please the PCTA extras...or the
World's Greatest DXer. :-)

>You strike me as the kind of guy
>who goes wandering through life asking, "Why don't people like me?".

Tsk. Don't project your own personality on others.

>I'll bet you haven't an idea of the answer.

Tsk, tsk. We all know you don't.

>...in anyone's world, Leonard. It is simply fact. You were wrong. :-)

Nope.

>Deal with it.

No problem.

Now, why can't Mr. DX handle opposite opinions to his?

Answer: He never could! :-)

I "wasn't aware?" :-)

Wow, Marconi Jr., you best run to GE and have them cancel out
a bunch of RCA archives with my name on it. They were very
much concerned with spurious output (noise is a spurious output).
Real technical papers, published and all that after being checked
by staff folks.

What "crap" did you get in your feeding spoon tonight?

Did it give you terrible heartburn to having an NCTA demonstrate
some inside knowledge of frequency control? I'll bet it did.

There's all kinds of antacids on the shelf. Avail yourself of them.

>Weren't you the guy who wrote something of nit-picking? When did you
>think those subbands came into existence?

The first ones were in 1934...birth of the FCC. :-)

>Authors. You know, who writes something. I've had a number of bylines
>in amateur radio magazines.

Wow. Yeah! Ham Radio Horizons...aimed for the beginner in
radio.

Go for it! Famous Author Davie! You ought to publish a book.

>Be careful, you'll end up looking like Brian Burke in his A-1 Op Club gaffe.

...or any other NCTA you want to destroy. :-)

>Do us a favor and note that this newsgroup is rec.radio.amateur.policy.
>I'm not impressed with your frequent touting of your past professional
>status.

Awww. We don't impress you? How sad.

>Many radio amateurs are current or past professionals in
>communications or electronics.

So? You demand "showing papers" at train stations too?

That black leather overcoat is in style, I suppose. The jack
boots aren't...

>Tooting your horn about your past work
>and attempting to use it as a substitute for an amateur license in an
>amateur radio newsgroup isn't likely to win you any points among hams.

Tsk. This is a "points count?"

Poor Davie...still stuck on enforced licensing just to advocate some
freeding into getting into licensing. Tsk.

Who says the PCTA abrogate the First Amendment? Nearly all...

>Oh! Didn't you know? Jim's a licensed amateur radio operator. Maybe
>you could take up amateur radio.

Toss out the code test and I'll think about it.

Maybe you could take up "civil discourse," Davie?

Then you wouldn't look like second cousin to nursie yell-yell.

>I'm guessing that Jim and everyone else here was already aware of that
>factoid. Jim likely realizes that you didn't invent radio or all of the
>circuits and systems in modern ready-built radios. That makes you even.

No problem. You sure as hell didn't invent much. :-)

Didn't St. Hiram invent radio? And then form a religious order around
it? :-)

Why did you grab all the A-1 sauce? :-)

LenAnderson@ieee.org

That's it all right. Website's been up about a year IIRC. All anybody has to do
is google my callsign and the url comes right up.

Rig was built in the early 1990s and has been one of the main rigs here since
1994. Cost less than $100, and was built from almost all recycled parts (had to
have 3 crystals made). Tuning mechanism is recycled from a junker BC-221 -
swords into plowshares, as the Book says. Built around some nice 8 pole 500 Hz
bandwidth filters I found at Gaithersburg hamfest. Two cascaded filters
separated by the first IF stage are used. All the heterodyne crystals have
trimmers to permit setting to exact frequency. The heterodyne system is unique,
not copied from any other rig. (Not that there's anyhting wrong with that; the
Type 6 used the Heath SB-series scheme).

Antenna is a W3DZZ-inspired inverted V with the apex at about 37 feet and the
ends at about 12 feet.

Of course the shack isn't always that neat. ;-)

If you look carefully, you can see that the shack table and shelves are
homebrew too.

Several rrappers and thousands of other hams have worked me while I was using
that setup. It's even been on Field Day, where in 1995 I took sixth place in
1B-1 (2948 points, 640 QSOs, all setup, operation and takedown by one person -

me).

The rig has been described elsewhere, both on the internet and amateur magazines.

Wait a minnit, if there are sideband signals on the LO output the
inference seems to be that the carrier is being modulated. By
something. What something?

> Now even first-generation designs had noise sidebands many dB below the desired

Of course it isn't. This sort of overkill ticks me off, it's BS tossed
out by the advertising geniuses to reel in the no-clues and
overcomplicates the equipment for the rest of us.

> >increments Sweetums, the best you can do with the thing is tune it to

> R-70 is a pretty good receiver.

OK, the R-70 "happened" during my radio hiatus and went past me so I
poked around the Web for info on it. Looks like it is a decent
performer. Problem is that at this point it's OLD, it comes out of the
same generation of equipment as the TS-930/940 did both of which now
suffer well-known aging/reliability problems. I've had more than my
share of those with the 940 so I wouldn't give an R-70 the desk space
if somebody gave me one gratis. If Sweetum's R-70 is still ticking
along without problems good for him.

> Engineering 101: Don't reinvent the wheel. They even taught us EEs that one.

He's a breed I'm quite (unfortunately) familiar with: the old time
military aerospace out-in-the-shop bench tech types. Doesn't matter
what narrow fields they worked in, oleo struts, control surface
actuators, flight control electronics, radar, comms electronics, pilot
relief piping, their syndromes are all the same. They had these little
niches in which they beavered away on their little piece of the
overall much bigger job or project or whatever it was. Eventually,
because of their complete immersion in their niches, they come to the
conclusion that it all would come apart save for their "expertise" and
anybody who isn't particularly up to speed on the nits and grits of

whatever they were buried in are unworthy no-clue clods. Sweetums is a perfect example of these windbags.

So along comes somebody like myself, a fish-out-of-water mechanical engineeer in this group who readily concedes non-expertise in topics like circuit design and even worse from his twisted perspective has no interest at all in doing any "synthesizer development" sorts of things so he bores in on me with his bafflegab. Which highlights at least two of his fundamental deficits: (A) He's mentally incapable of conceding a lack of "technical expertise" on any subject involving radio, particularly ham radio and (B) He's equally incapable of understanding why professionals like thee and me feed each others' expertise and work together to get from here to there and *don't* reinvent wheels.

> That's easy! Would take me about sixty seconds to get the answer.

Maybe. I can't do it in sixty seconds at the moment, I dropped my slide rule again and have to realign it before I do the speed run so QRX . . . .

We both know Sweetums won't touch it with a ten foot pole even though it's a sophmoric simple exercise. He doesn't know where to even start to approach the problem let alone solve it so he'll diss it as irrelevant. Typical and completely predictable sub-professional defensive behavior.

One can spend two lifetimes diddling frequency synthesizers and such but if whatever freq pops out of his gem doesn't make it to the airwaves via an engineered radiator and it's support structure one might as well have been a lifeguard in the Mohave desert.

>> "The world" isn't "wondering" at all.

Yes it is! ;-)

>> Neither Jimmie nor Davie have
>> developed any marketable ham transceivers.

Who are "Jimmie and Davie"?

Perhaps Len meant "Jim, N2EY" and "Dave, K8MN". If so, then his use of
feminized diminutives for our names proves (paraphrasing Brian, N0IMD): "he
doesn't have the guts to spell our names right".

I have designed, built, and operated at three amateur radio HF transceivers.
First one was about 25 years ago. Before that, I was doing the same with

separate receivers and transmitters.

>No, I've developed the same number of marketable ham transceivers you
>have, Leonard--none.

Why is it at all important that something be "marketable"? One of the joys of home construction is *not* having to meet someone else's idea of "what the market wants".

>Then again, I was aware of the synthesizer phase

>
>Weren't you the guy who wrote something of nit-picking? When did you
>think those subbands came into existence?

Subbands-by-license-class came into existence in US ham radio in 1951, with the creation of the Novice. Len wasn't a ham then.

The current system of General/Advanced/Extra subbands-by-license-class came into existence in US ham radio in 1968, after several years of discussion. Len wasn't a ham then. I was, K8MN was.

Len wrote here in January 2000 that he was going for Extra right out of the box. He wasn't a ham then. Nor now.
>
>> >Numerous positngs by
>> >different authors, all of whom actually had to deal with those
>> >"subdivisions" have proved that to be utterly false and without basis.
>>
>> "Authors?" Who in here, besides myself, can claim many bylines
>> and a staff position at a ham magazine?

Living in the past....

Did Len have a nice office at the magazine? Did he like living in New Hampshire? Whatever became of that magazine? - I can't find it on the newsstands...

I do have quite a few old copies of it, but Len's name isn;t in any of them.

>Not Jimmie. Not Davie.

Doesn't have the guts to spell...

>Authors. You know, who writes something. I've had a number of bylines
>in amateur radio magazines. Be careful, you'll end up looking like
>Brian Burke in his A-1 Op Club gaffe.

I've had articles published in amateur magazines. A lot more recently than Len, too ;-)

But as you say, Dave, an author is someone who writes. I am the author of this post; therefore, I am an author. So are you.

The point is the same: Numerous authors here have proved Len's assertions about subbands and synthesizers to be completely without basis in fact.

>> >Len, of course, never had to deal with them at all because he's never
>> >been a radio amateur and never operated an amateur radio station. (By

The plain simple fact remains that Len has not had to deal with subbands-by-license-class in amateur radio. Or any other amateur-radio issues. His observations are those of a spectator only, not a participant.

>> >Of course, to the knowledgeable reader, Len's postings simply reveal

Re: "Current rules bar unlicensed radio emitters, such as utilities, from disrupting licensed ones, such as hams. But the meaning of "harmful" interference is debated. For example, Franca says, car-based hams can move away from static."

Oh yeah - driving down the road with the power poles beside you and all you have to do is "move away from the static." Another great quote from someone who either doesn't know of what they speak, or just a basic liar.

You can understand my confusion when you wrote about losing "interest in
DXing in 'radio sports' and the wallpaper collection of QSLs after
working at station ADA long ago". You made it sound as if you got a
belly full of those things at ADA. So am I to understand that you have
no actual experience in DXing, contesting or QSLing?

> So, Davie, did you do much contesting from those embassies in
> the middle of Africa or from Finland? Get many QSLs?

Well, Lennie, my contesting overseas was from my home, not from an
embassy. I did plenty of contesting and plenty of DXing. I was never
in "the middle of Africa", only in West Africa, Southern Africa and East
Africa. Yes, I received tens of thousands of QSL cards for each of
those African operations. Of course I didn't operate 24/7, only in my
spare time and I didn't have a staff of operators. There was just me.

> >Len, I have known many men who have done similar work. With few
> >exceptions, I have viewed their work as honorable.
>
> I'll bet you didn't understand much of it...

So....they weren't honorable men, doing honorable work?

> >It obviously had
> >worth as all of them received paychecks.
>
> No "A" grades on their report cards? Tsk.

Was their goal to obtain good grades? Tsk, tsk.

> >receive paychecks for what we do. We do it strictly for the love of
> >it.
>
> Tsk. Ask the behind-the-counter types at HRO if they do 9-5
> for free... :-)

Are those men working as radio amateurs or is amateur radio what they do as an avocation? Tsk, tsk. :-) :-)

> >I'm sure your professional achievements have pleased you.
>
> They sure did.

I thought as much since you've recounted them for us here on numerous occasions.

> >They don't get you any passes in amateur radio.
>
> Yes, and amateur radio licenses don't mean squat to legal
> operating in the rest of the radio world.

I fail to see what difference that makes. Why should we, as radio amateurs, posting in an amateur radio newsgroup, be concerned about what qualifications are required for other services? Is is your aspiration to participate in other radio service? Please, go forth and do so.

> Sunnuvagun!

Yeah. You made a rather pointless comment.

> >What pleases you hasn't necessarily impressed us.
>
> Yes, your supreme royalness. Humblest of apologies, your worship.

I don't sense sincerity from you.

> >Your grating manner and rudeness to radio amateurs have not endeared you
> >to more than a couple of people here.
>
> Awwwww.

> Tsk. Nothing an NCTA says can please the PCTA extras...or the
> World's Greatest DXer. :-)

I'm not the World's Greatest DXer but I thank you and your little electrolyte for the compliments. There are things that you could write which would please me. You just haven't written any of them.

> >You strike me as the kind of guy
> >who goes wandering through life asking, "Why don't people like me?".
>
> Tsk. Don't project your own personality on others.

I'm not, Leonard. You see the reaction your antics get from others.

> >I'll bet you haven't an idea of the answer.
>
> Tsk, tsk. We all know you don't.

I have a very good idea of why you grate on people. It is immediately apparent.

> >...in anyone's world, Leonard. It is simply fact. You were wrong. :-)
>
> Nope.

You'll be right when pigs fly or you obtain an amateur radio license, whichever comes first.

> >Deal with it.
>
> No problem.
>
> Now, why can't Mr. DX handle opposite opinions to his?
>
> Answer: He never could! :-)

I'm handling them rather well, Mr. No DX, but we're not talking of an opinion; we're talking about one of your factual errors.

What did you recently tell us about synthesizer phase noise, Mr.
Marconi's uncle? If you keep repeating it, GE may black out your name
on all the RCA archives without a request from me.

> What "crap" did you get in your feeding spoon tonight?

You didn't post it "tonight". It was posted several days ago. Would
you like a good googling?

> Did it give you terrible heartburn to having an NCTA demonstrate
> some inside knowledge of frequency control? I'll bet it did.

I never believed that morse code testing was necessary for "inside"
knowledge of frequency control. However, you made a number of factual
errors. Ever get around to looking at any of the material for which I
posted urls?

> There's all kinds of antacids on the shelf. Avail yourself of them.

I'm not the person in a dilemma over having posted the factual errors.
You know where the shelf is, I take it?

> >Weren't you the guy who wrote something of nit-picking? When did you
> >think those subbands came into existence?
>
> The first ones were in 1934...birth of the FCC. :-)

Yeah " :-) "

Beats having to eat your words, doesn't it?

> >Authors. You know, who writes something. I've had a number of bylines
> >in amateur radio magazines.
>
> Wow. Yeah! Ham Radio Horizons...aimed for the beginner in
> radio.

Are you denigrating beginners in radio? those who write for them?
Are you forgetting CQ?

> Go for it! Famous Author Davie! You ought to publish a book.

I am preparing to publish a book. Would you like to place an order for
an advance copy, Former Famous Author Lennie?

> >Be careful, you'll end up looking like Brian Burke in his A-1 Op Club gaffe.

> ...or any other NCTA you want to destroy. :-)

I dunno, Len, does setting the record straight on something destroy you
or "William"?

> >Do us a favor and note that this newsgroup is rec.radio.amateur.policy.
> >I'm not impressed with your frequent touting of your past professional
> >status.
>
> Awww. We don't impress you? How sad.

No, not sad, just factual. When did you become plural?

> >Many radio amateurs are current or past professionals in
> >communications or electronics.
>
> So? You demand "showing papers" at train stations too?

You equate the statment of a fact with a demand to show papers? That
doesn't make sense.

> That black leather overcoat is in style, I suppose. The jack
> boots aren't...

This must be the point at which you realize that you've lost an
argument.

> >Tooting your horn about your past work
> >and attempting to use it as a substitute for an amateur license in an
> >amateur radio newsgroup isn't likely to win you any points among hams.
>
> Tsk. This is a "points count?"

Don't you know? You are the fellow who often writes of "message
points".

> Poor Davie...still stuck on enforced licensing just to advocate some
> freeding into getting into licensing. Tsk.

Huh?

> Who says the PCTA abrogate the First Amendment? Nearly all...

If you're still posting, your First Amendment rights are intact. What you seem to desire is your rights to post but suppression of my right to disagree with you, to correct you or to issue catcalls at your sillier ideas.

> >Oh! Didn't you know? Jim's a licensed amateur radio operator. Maybe
> >you could take up amateur radio.
>
> Toss out the code test and I'll think about it.

I thought you told us that you had no interest in obtaining such a license.

> Maybe you could take up "civil discourse," Davie?

Are you the course instructor (or the coarse instructor)?

> Then you wouldn't look like second cousin to nursie yell-yell.

What! Has the course (coarse) begun already. Wait a minute--I want to make notes.

> >I'm guessing that Jim and everyone else here was already aware of that
> >factoid. Jim likely realizes that you didn't invent radio or all of the
> >circuits and systems in modern ready-built radios. That makes you even.

Independent design project. Made the circuit boards meself and all.
Still have it, still works. Don't use it much though, because one
thing I learned in the process was that I prefer an analog dial for
most purposes. Just a personal preference. Which is one of the big
reasons to homebrew - you get to indulge personal preferences.

> > And yes, you could easily reset it to 100 Hz.

The 74192 and other TTL family chips were hot stuff 30 years ago when
I was doing that project. You can still get pin-compatible parts
today.

The audiophile *market* is full of pseudotechnology - driven by the
fact that there's $$ involved. But there's also some good stuff too,
driven by folks who like *music*.

I like music.

That's exactly what's going on.

> By something. What something?
>
All kinds of somethings. Here's just one:

In a PLL synthesizer, the VCO control voltage may wander a bit for a
variety of reasons. Say you have a design where a voltage swing of 5
volts causes the VCO to move 5 MHz. *Any* variation in that control
voltage, from *any* source, will cause the VCO frequency to wander a
bit. 1 millivolt variation gives a shift of 1000 Hz, 1 *microvolt* of
variation gives 1 Hz, etc. Remember that the control voltage is a DC
signal and the rest is obvious.

That's just one source of phase noise.

> > Now even first-generation designs had noise sidebands many dB below the desired

All the Inrads and DSP in the catalogs won't do
> > any good in such a situation.
> >
> > That's why phase noise is important to hams.
> >
> Huh: I learned a bit from this post.

I hope so!

The upshot of all of it is that in real-world hamming, we often have
to deal with bands full of strong signals, yet we want to hear the
weak ones.

I've run into more than a few hams who say they "hate contests because
they make the bands so noisy". What's really going on, in at least
some cases, is that the effects of so many strong signals on the air
all at once raise the apparent noise floor of their *modern*
transceivers, in part due to phase-noisy oscillators in the
contest-haters equipment.

> Which is what USENET usta be all about . .

The issue is that some specifications are much more important than
others. And that getting the signal on the air is the goal...

> > >increments Sweetums, the best you can do with the thing is tune it to

> > Almost qualifies as a boatanchor now....
>
> Hang classic tags on it.

One of the problems with older solidstate equipment is that much of it
used custom parts for which the only sources are the manufacturer (if
they still support the unit) or junker units. If there was a weak
spot, finding a junker with a usable part maybe hopeless. The Kenwood
TS-440s reputedly has this problem in its display.

Watch for Kerry to cheat tonight on the debates.
Looks like the former-POW organization has linked up with
the Swifties for a new round of ads exposing Kerry's treason
when he returned from Viet Nam. You can hear the
libs screaming "foul" already.

As hams routinely work weak signals, any interference is harmful.
So who cares if hams can't chase weak rare DX BPL people ask...
Well, that station in distress in an emergency is likely to
be a weak signal. A regional disaster (hurricanes, earthquakes,
floods, and such) will likely take out electricity in the area
and also take out cell phone service. So the station in
distress will have to use batteries or run off a car's electrical
system, and feed a crummy antenna. Which means weak signal for
hams outside the disaster region. We don't need BPL QRM.

Phil, something even more basic. BPL doesn't run on batteries.
In the ham urban myth, all infrastructure will FAIL in emergencies.
Ergo, there's no BPL inteference to amateurs...all of whom have
ready-to-go standby generators and other power sources. :-)

Beep, beep.

Well, let's see...

I've operated equipment made by Collins (S-line), Drake (4 line and 2B), Heath (SB line and various HWs, including HW-101 and -16), EF Johnson (Adventurer, Viking 2, Valiant), Kenwood (TS-520, TS-820, TS-450, TS-940) Yaesu (FT-101 and others) Icom (IC-735, IC-751, and a bunch of others), Ten Tec (Argosy, Corsair 2, Omni D and V)....

And a bunch of others I can't recall offhand.

>
>So, would it have worked fine since if you'd used a credit card?

Len walked into a radio store once upon a time and the salespeople couldn't explain some technical point to his satisfaction. Some of those salespeople held the Extra class license. Len's conclusion is that people who hold an Extra class license don't know how radios work.

>> I'll have to go back to old checkbook transactions to find the

It also won't transmit....

Of course, what we see here is another classic case of Len's behavior that can be summed up in one sentence: Do as Len says, not as Len does.

Picture is less than 2 years old.

> Appears to be a giant collection of QSTs to the
> right...

Every issue since mid-1926, and some older ones. Also lots of other radio
magazines, books, manuals, etc. The picture shows only a small part of the
library.

>(archives of the renowned historian no doubt). :-)

Who would that be?
>
> Wonder if the K2 is still in the Himilayas? :-)
>
It was elsewhere at the time the picture was taken. You can see really good pictures of the K2, K1 and KX1 at the Elecraft website

http://www.elecraft.com

Last time I looked, there was an interesting project under "Tech Notes" on that site. An inventive amateur built an ITX-motherboard based computer into an EC2 enclosure, to match the K2.
